Let Steinmesch Tell You How

Everybody who knows chickens knows Steinmesch.

I know how to raise more chickens and better chickens, to get more eggs and better eggs and how to get more money for both. I know how to pick out and breed fowls that pay in poultry and eggs and win in the show room. I ought to. I have been at it for 30 years and own my own complete farm. I fed and looked after 10,000 fowls at the St. Louis World's Fair, the largest poultry show ever held in the world, and I am a Life Member and Member of the Executive Committee of the Am. Poultry Association, President S.W. Branch Am. Poultry Association, Pres. Silver Wyandotte Club of America and the St. Louis Fanciers Association and Member of the Missouri State Poultry Association.

Now I'm Going To ere the benefit of what Tell What I Know I have learned. I am FREE going to offer plain understandable suggestions to those who want to know how to make the most out of their poultry. This information is not for sale. I'm going to give it to you and show you how to really make money in poultry. I will send the whole story of my success and my methods to you in handsome book form without one penny from you. Just send me your address and say: "Steinmesch, tell me how." Address Henry Steinmesch, President 211 Market St., St. Louis, Mo.

White Holland Turkeys

Prize winners weighing to 35 lbs. Grand birds, either for show or breeders. Write me if you want quality.

TESTIMONIALS

I won 1st pullet at Galesburg, Illinois, January 17-22, 1910. This pullet was from a setting of eggs I got from you last spring. Her score was 93 by Judge Faulkner. You may use this information as you see fit.—S. E. Coddington, Woodhull, Illinois. February 8, 1910.

I believe my stock do you good advertising. At our Kansas State Show just closed my "Rox" in competition with one hundred seventy-five Barred Rocks entered, among which was a pen of Kansas City winners there, mine won 1st Cockerel, 1st Pen, 3d Cock and 1st Special for best colored cockerel, this made them crow quite testily for "Bradley Bros."—Mrs. J. T. Woodford. January 26, 1910.

breeders of the State I won 1st and 2d on pullet and 2d breeding pen, making more prizes than any one breeder got in the Barred Rock class. So you can see what that 1½ setting of pullet mating eggs have done both for utility and show birds. When asked what strain I have I just say "Bradley's."—E. P. Roloson, Delaware, Ohio.

OUR BREEDING PENS FOR SALE AFTER MAY 20TH

Single Comb Rhode Island Reds

Winnings at Detroit, January, 1910: First, second and third pullets; first hen, second cockerel; also first pen on five entries.

J. S. MORES

MUNITH, MICHIGAN

Dawson's White Wyandottes

At the recent Ontario Winter Fair, the largest show ever held in Canada, (5,000 birds) and quality equal to any show on the continent, won first, fifth and seventh hen, first and eighth pullet, fourth and fifth cockerel, cup for best cockerel and pullet and special for best display. At the Canadian National Exhibition we won three firsts, two seconds, two thirds, one fourth, one fifth and one sixth; also cup for cock, cockerel, hen and pullet and special best display. At New York State Fair, nine ribbons on ten entries. A total of twenty-six regular prizes and numerous specials at three of the largest shows in America. Our prices are moderate. Get our mating list.

W. Dawson :: London East, Canada

KING'S FAMOUS BARRED ROCKS AND S. C. W. LEGHORNS

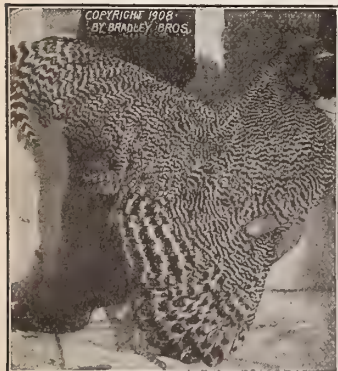

Do you want strong healthy chicks? Fine style, large bodies and great layers have been the keynote of my success. The breeding stock has large grassy runs, thereby insuring fertile eggs. My matings for 1910 far surpass those of former years. Many of the birds heading these yards have been the winners of highest awards in strong competition. With my enlarged facilities I can furnish eggs promptly at \$2.50 per 13; \$4.00 per 26. My guarantee is satisfaction and a square deal to all. I solicit your orders. For further information, write for mating list. Address

G. M. King : R. R. 1 : York, Pennsylvania

**WHITE ORPINGTONS**

They lay like slot machines. At Cleveland in hot competition I cleaned up every first prize but one. I won 1st cock, 1st hen, 1st pullet, 1st pen. Also American Orpington Club specials on White cock, hen, pullet and pen. Also four silver cups, one of them being for best female Orpington (any variety) in the show, awarded by Judge Oke to my hen Bess. At Pittsburg I won 1st cock, 1st hen, 1st cockerel, 1st pen and special for best display Orpingtons, any variety, Judge Denny. Altogether I have 22 firsts, 12 seconds, 12 thirds, 16 specials, 2 diplomas, 10 silver cups at Cleveland, Madison Square, Chicago, Pittsburg and other large shows. High class show birds and breeders for sale at reasonable prices. Eggs, \$8 per 12.

Lawrence Jackson : : Haysville, Pennsylvania

World's Champion of 1906, Our \$2,000 Male.

Winner of First Prize and Sweepstakes Special at New York's Greatest Barred Plymouth Rock Show, nearly 500 in line. Is descended from the sire of First Chicago Cockerel, 1902; also from the sire of First Chicago Male, 1906. These and other Chicago 1st Prize Winners were bred by us and hatched by customers FROM EGGS WE SOLD.

I believe my stock do you good advertising. At our Kansas State Show just closed my "Rox" in competition with one hundred seventy-five Barred Rocks entered, among which was a pen of Kansas City winners there, mine won 1st Cockerel, 1st Pen, 3d Cock and 1st Special for best colored cockerel, this made them crow quite testily for "Bradley Bros."—Mrs. J. T. Woodford. January 26, 1910.

breeders of the State I won 1st and 2d on pullet and 2d breeding pen, making more prizes than any one breeder got in the Barred Rock class. Read This Ad Carefully

For months past I have been telling you about Lamon's Northern Raised White Plymouth Rocks—"the hardy kind"—about the constitutional vigor of my flock, and I know if you could see and handle my birds and note their large size, chalk white plumage, bright red eyes, deep full breasts, long broad backs with well spread tails, rich yellow legs set well apart, you would make up your mind to place your order with me for White Rock eggs this spring. I know you would see that it means a whole lot to have good strong, healthy birds to breed from, as they are the quick maturing kind. The winter layers and the ones to win the prizes at the best shows. I want to tell you another thing about

LAMON'S WHITE PLYMOUTH ROCKS

Their eggs hatch and the chicks live, as I don't send out eggs until they run high in fertility. I doubled my business last season and I want to double it again this year, and the best way of doing it that I know of is by making satisfied customers. Can't I have your order? Send for my circular and list of testimonials from former patrons.

EGGS from pen headed by my 4th pen ckl. at Boston, 1910, \$10 per 13; all others \$5 per 13, \$9 per 26. These are the finest matings I ever owned. I am the originator of the R. and S. C. Buff Bantams. A limited number of eggs, \$10 per 13.

ORPINGTONS

BUFF : BLACK : WHITE

From kodak snap shot; not retouched

Lest any one should think we are living on past reputation in Blacks, we present a snap shot photo, not retouched, of hen we have never shown before. This is a far better bird than old Empress herself. Next year we will have still better.

Do not forget for a moment that our mating list in Buffs this year includes not only our sensational imported birds of magnificent type, size and color, but also includes the birds that won Judge Stanfield's \$50 trophy cup for best Buffs he judged last year at Madison Square, Chicago. National Club Meet at Cleveland, etc. Hard to beat this?

In Whites we are arriving mighty fast. Here is what the Rev. J. N. Williams of England says in February Canadian Poultry Review of the great champion White Orpington cockerel we imported recently. Mr. Williams judged the show (Leeds) where this wonderful cockerel won the 50-guinea (\$250) challenge trophy: "The pride of place was won by Messrs. Whittaker & Tutill's magnificent White Orpington, pure in color as driven snow, massive, broad, blocky and low set, which, when set down before the seven judges who had to decide, walked about as majestically as a peacock." Send for mating list.

CHEVIOT FARMS - CINCINNATI, O.

BUFF AND WHITE ORPINGTONS

THE OLDEST SPECIALTY BREEDERS IN THE UNITED STATES

OUR SHOW RECORD on Buffs at Madison Square Garden is unequalled—winning Silver Cup for best display, showing only 9 birds and having 7 points more than our nearest competitor. In same show also won handsome Silver Cup for Best Cockerel. Our winnings at Chicago, where we won more firsts than all competitors, cannot be equalled.

Can there be any question where you should order your stock and eggs?

OUR MATINGS in Buffs and Whites are the finest we ever owned and with our long line of show producers in the past convince us winning specimens will be produced. Send for free mating list. We are quoting special prices to close out some grand breeding cockerels at this time. \$10 to \$15 gets a grand bird. This is your opportunity. We breed for quality, health, vigor, and egg production. Write us your wants. Mention American Poultry Journal.

J. M. Williams & Co., Box B, No. Adams, Mich.

Our Answers to Your Questions

WHAT kind of chickens are most profitable?

Of course you want the best layers in the world, and the finest exhibition birds, perhaps. Then get White Leghorns, and we further suggest the NEWTOWN strain.

WHY are the Newtown White Leghorns Best?

Well, we've given years of experimenting and study to their perfecting and we're very proud of our achievement. Our splendid records at greatest poultry shows are the result.

WHEN is success in chicken raising assured?

When you start a foundation stock of a strain of world wide popularity—such as these—and give them care. There's a steady market for the unsurpassed quality of White Leghorn eggs and chickens, and plenty of prizes for the birds exhibited.

WHICH month should chicks be hatched?

White Leghorns hatched in May or June will be laying profitably in November or December—just when eggs are highest in price—so begin now.

WHOM should Hatching Eggs and Baby Chicks be ordered from?

THE NEWTOWN PRODUCING COMPANY—a chicken plant ideal in its up-to-date methods of raising and handling chickens. We've just installed ANOTHER 10,000 egg Hall Mammoth Incubator, so we are ready to give you better-than-ever service. Large and small orders given the same attention.

WHERE is the Newtown Producing Company?

On the Reading Railroad between Philadelphia and Trenton—a place of 53 acres devoted exclusively to White Leghorns. We have a little booklet, illustrated, interesting and free, that we'll be glad to send you; or we'll be glad to see you here any day except Sunday. Let us hear from you if you are interested in chickens. Address

Successful Egg Farming

Among people who can afford luxuries there is great demand for a regular supply of fresh eggs. The few growers who can furnish them regularly, Winter and Summer alike get very high prices.

The Corning Egg-Book

(entitled "\$6.41 per Hen per Year"), tells how two men, in poor health, starting four years ago with only thirty hens, made from their little egg-farm a clear profit of over \$12,000 last year. It tells all about their experience, their failures, their methods and how others men or women, with good sense, care and faithful work can make money in the same way. Not a detail left out.

The Corning Egg-Book is sold in combination with the Farm Journal, Philadelphia, Pa., and we have made arrangements to make this

Special Offer

For \$1.00 (cash, money order or check) we will send postpaid the Corning Egg-Book and the Farm Journal for two years, and American Poultry Advocate 2 years, all for \$1 if order is sent at once to

American Poultry Advocate
227 Hogan Block, Syracuse, New York

WE SAVE YOU 50 PER CENT \$1.50 FOR 75c

Three of the Best Poultry Publications, Practically Supplying the Entire Needs of Every Poultryman, at One-Half the Regular Price

Our "Big 3" Combination

American Poultry Journal } **ALL THREE FOR**
Western Poultry Journal } **75 CENTS**
Farm-Poultry } **Reg. Price, \$1.50**

AMERICAN POULTRY JOURNAL is the oldest, largest and handsomest poultry paper in the world, and is conceded to be the leader in all things pertaining to poultry. Is copied by both old and new poultry publications. In fact, it has no equal. Now in its 41st volume.

FARM-POULTRY, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

WESTERN POULTRY JOURNAL, published at Cedar Rapids, Iowa, is in its 21st volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, thoroughly cover the entire field of poultry literature, and make a poultry library in themselves.

THE GREATEST COMBINATION EVER OFFERED

and especially so when you take into consideration the fact that American Poultry Journal contains from 68 to 188 pages of interesting matter, any number of which is worth more than we are asking for one year's subscription to all three magazines. This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

"QUALITY" BARRED ROCKS

BREEDERS FOR SALE NOW

I have hatched a great number of chicks from my superb pens, hence all of my CHAMPIONS OF THE BREED are offered at low prices. There is time now for you to get some fine chicks from these excellent breeding birds. I have cockerel and pullet breeders in plenty and they will go at right prices. If you want some of the stuff that I have reserved for my own breeding get your orders in now. Before the egg season started I was sold out of stock and returned many orders. Now if you want the quality you could not get before let me know. Correspondence is a pleasure if you mean business. I have one thousand chicks growing and invite you to come and pick out what you want or will take great pains to tell you exactly what it is.

Amos Burhans

Box A, Waterville, Minnesota

FREE! ORIGIN AND HISTORY of All BREEDS OF POULTRY

THE greatest book on poultry ever published, contains sixty-five pages of reading matter, size 9x12 inches, also contains illustrations of 198 different fowls in their natural colors, painted from life. Regular price \$1.00. It has taken years to complete the drawings for this book. It is something never before attempted by any publication, not even the Standard of Perfection contains pictures of fowls in colors.

This book is being sold for \$1.00 every day, but we want every poultryman to have one, as it is the grandest piece of work ever accomplished in poultry literature and is a living ad for its publishers—American Poultry Journal Publishing Co. To accomplish our object and get a copy of this book into the hands of every poultry fancier, we will give one copy FREE for the first six subscriptions to American Poultry Journal you send us at one-half our regular subscription price.

Send us six subscriptions to American Poultry Journal together with \$1.50 and we will send you, postpaid, a copy of the Origin and History of All Breeds of Poultry.

BUT THIS IS NOT ALL

You can take subscriptions at any price from 25 to 50 cents and keep everything above 25 cents as your commission. For the first six subscriptions you send us you will receive a copy of the Origin and History of All Breeds of Poultry as per offer above and these subscriptions will count on the grand prizes listed below as well as any other subscriptions you send us.

Do not fail to read this list carefully as the prizes are well worth your time and trouble and will many times repay your efforts to secure the subscriptions for us.

LIST OF GRAND PRIZES

First Prize

**\$600
WING PIANO**

The best piano manufactured by the well-known piano manufacturers, Wing & Son, New York City, N. Y., will be given the agent sending us the largest number of subscriptions before June 10, 1910. : : : : :

Second Prize

**\$100
CASH**

Will be given the agent sending us the second largest number of subscriptions before June 10, 1910. : : : : :

\$200.00 will be distributed among the eight next highest agents as follows:

3d Prize, \$50	Pen of Fowls, your choice, or Incubator or Brooder, any make you desire
4th Prize, \$35	" " " "
5th Prize, \$30	" " " "
6th Prize, \$20	Trio of Fowls, your choice, or Incubator or Brooder, any make you desire
7th Prize, \$20	" " " "
8th Prize, \$15	" " " "
9th Prize, \$15	" " " "
10th Prize, \$15	" " " "

In making your selection of Fowls, Incubators or Brooders, they must be selected from Advertisers in American Poultry Journal

Special Instructions to Agents

1. Renewals count the same as new subscriptions. 2. Cash must accompany all subscriptions; this will avoid any misunderstanding. 3. Keep a duplicate list of all subscribers sent us in case any question arises when the contest closes. 4. In case of a tie the value of the prize will be divided. 5. The subscription contest closes June 10th, 1910. All letters postmarked that day will be counted, thus giving those at a distance an equal chance with those near. 6. A list of the winners will be given in the July issue, 1910. 7. All agents may work where they please; this is fair to all. Send for more coupons or any supplies you need. 8. The coupons are made with receipts at the side to be torn off and given to subscribers. This assures the subscriber that you are our authorized agent. 9. No subscription can be sold for less than 25 cents. 10. You must send at least two subscriptions to entitle you to agents' commission or prizes. 11. All subscriptions must be taken on the merits of the publication. 12. Notice—Sell our book, "Origin and History of All Breeds of Poultry," at \$1.00 and keep 25 cents as your commission, this will count as four subscriptions on the contest. Also, take three years' subscriptions to American Poultry Journal at \$1.00 and keep 25 cents as your commission, this also will count as four subscriptions on the contest. : : : : :

TODAY IS THE TIME TO START if you wish to secure one of our new books FREE. Remember, too, that if you get an early start you have the advantage of always being in the lead, and this is better than to be always trying to catch up with the other fellow.

We will furnish you with a sheet of special bargain coupons which you can use if you desire. These coupons have been successfully used on former contests and whereas you only receive 10 cents as your commission when using same, you will find that you can get many more subscribers. In fact, we have agents who give all of their commission to the subscriber and in this manner get many more subscriptions. Send for as many sample copies as you can use to advantage and they will be sent you free of charge.

American Poultry Journal Pub. Co., 358 Dearborn St., Chicago

NOTICE: SEE OTHER PAGE FOR SPECIAL OFFER THIS MONTH

A Gold Watch Free to Every Agent

We will give a TWENTY-YEAR GUARANTEED GENTLEMEN'S GOLD WATCH TO EVERY AGENT who sends us 50 one-year subscriptions at 25c each or 20 three-year subscriptions at 75c each during the month of May, 1910, and will also allow these subscriptions to count on the Grand Prize Contest, which closes June 10th, 1910.

Remember, the regular subscription price of AMERICAN POULTRY JOURNAL is 50c per year, and you can take subscriptions at any price from 25c to 50c and keep everything above 25c as your commission. You get this commission besides the watch and grand prizes.

THE WATCH

To make a long story short, the watches we give are as good as you can buy on the market today. They are guaranteed to give entire satisfaction. The case is a twenty-year gold filled (the best on the market), and the movement 7-jewel (good enough for any man). The designs are handsome, and above all, the watch is not a so-called "Premium Watch," but is bought by us from a first-class jewelry house in this city, who sell nothing but reliable goods.

WHAT OTHERS SAY

Gloversville, N. Y., July 22, 1909.
American Poultry Journal Pub. Co.,
Chicago, Ill.

Dear Sir: I received the watch that I won as the fourteenth prize in your subscription contest. It is a fine timepiece and I am more than pleased with it. This is the seventh prize I have won on your subscription contest. They have all been valuable prizes. I have spent no time in getting subscriptions, as I have no chance to get out. If I had the time to go out I could get twice the number. Am sorry I cannot send you my photograph at present. Thanking you again for the fine watch you sent me, I remain,
Sincerely yours,
Ira Sitterly.

Kewanee, Ill., July 24, 1909.
American Poultry Journal Pub. Co.,
Chicago, Ill.

Gentlemen: I have been out of the city for some time, hence the delay in my writing and thanking you for the watch I received in your subscription offer. It is certainly a fine watch, and far above what I expect-

ed to receive. Have heard many flattering comments on your paper from many of the new subscribers I sent in. All are well pleased with it, and I expect to get their renewal next year.

I have no photo of myself at the present time, else I would gladly send you one. Respectfully yours,
Jas. S. Bremner.

Wadsworth, O., Jan. 14, 1910.
American Poultry Journal Pub. Co.,
Chicago, Ill.

Gentlemen: I wish to thank you for the prize I won in your subscription contest for the fall of 1909, which is a twenty-year gold watch. My friends tell me it was worth working for. All the subscribers I got are well pleased with the Journal, and I am satisfied with the watch.

My treatment was fair and cordial in the contest, and I will keep right on trying to get subscriptions for the best poultry journal published. Yours respectfully,
Oscar C. Nicodemus.

North East, Pa., Jan. 10, 1910.
American Poultry Journal Pub. Co.,
Chicago, Ill.

I received the watch in good condition, and some time ago. Many thanks for same; it is a fine timepiece and a very pretty watch. I thank you again for your courtesy to me, and wishing you and your paper much prosperity and success, I remain,
Yours truly,

R. A. Page.

Kansas City, Mo., Jan. 22, 1910.
American Poultry Journal Pub. Co.,
Chicago, Ill.

Dear Sir: Received your letter notifying me that I had won a prize in the fall subscription contest. The watch has also arrived in good order and is now keeping good time. It is a handsome watch and has been much admired by all who have seen it. I desire to thank you for your generous treatment accorded us during this contest. Will be in on your new contest. Yours truly,

C. S. Hunting,
1304½ Main St.

We have a great many more of these letters in our file from satisfied agents, and soon hope to have yours among them.

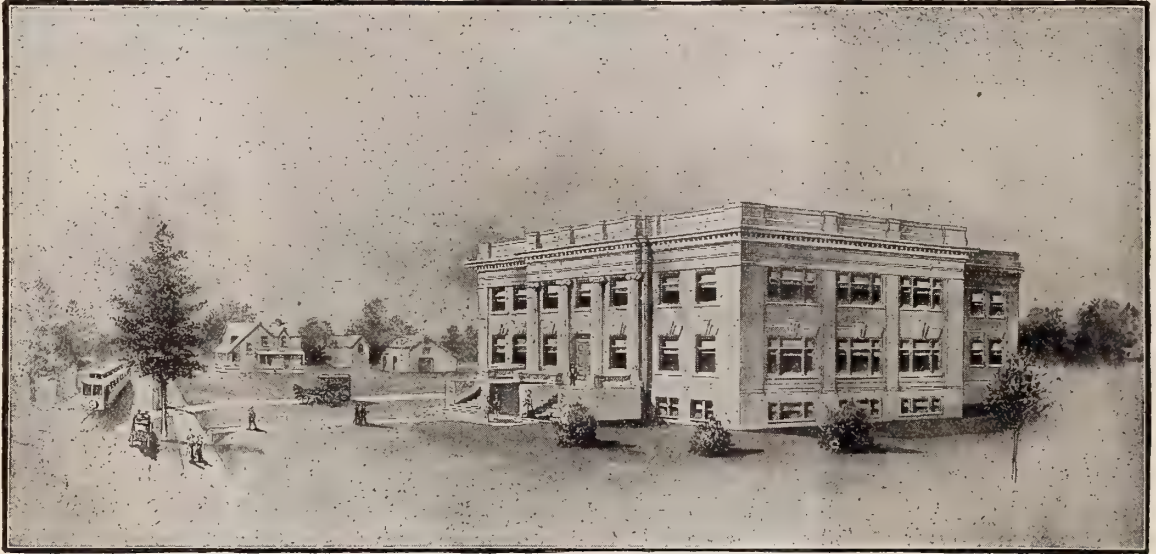

Read this offer again, also the grand offer on the other side of this page and then use your own judgment, whether you can use your spare time to better advantage or not. REMEMBER, it only takes 20 three-year subscriptions at 75c or 50 one-year subscriptions at 25c to get a gold watch, and these subscriptions also apply on the grand prize contest, details of which will be found on the other side of this page. Send all subscriptions to

American Poultry Journal Publishing Company
358 Dearborn Street : : Chicago, Illinois
THREE-YEAR SUBSCRIPTIONS COUNT 4 ON THE CONTEST

100 PER CENT PROFIT

THE FIRST YEAR

Keeping Poultry by the Philo System

PHILO NATIONAL POULTRY INSTITUTE. 27,000 SQUARE FEET OF FLOOR SPACE

We Guarantee

That any intelligent person can make a profit of 100 per cent on an investment in the poultry business by the Philo system, and our guarantee is backed by

One Hundred Thousand Dollars

worth of real estate in the city of Elmira, consisting of thirty acres of land and the complete plant of the Philo National Poultry Institute. This entire plant and equipment has been completely paid for out of the earnings of the poultry and poultry supply business by the Philo System.

The discoveries made to perfect the Philo System are the results of forty-one years' experience by one person experimenting and investigating the poultry business. We know that still larger profits can be and are being made by following our instructions, or we would not risk a hundred thousand dollars to back our guarantee. Our book, "The Philo System," tells how to do the work from start to finish and gives you the right to use all our inventions and discoveries to get such wonderful returns.

If in doubt about our responsibility and the value of our guarantee, write Mr. D. M. Pratt, President of the Second National Bank, Elmira, New York, or any other reliable party.

Send us \$1.00 and we will send you promptly our complete book and our agreement.

E. R. Philo, Publisher : 629 3d St., Elmira, N. Y.

CONTENTS OF THE PHILO SYSTEM BOOK:

Artificial Heat

Better poultry without it.

Artificial Incubation

About opening incubator during first week.
Avoid too much cooling.
Changing position of eggs.
Cooling the eggs at night.
Cooling the eggs on special days.
Overcoming defective work of first week.
Generation of heat by growing chicks.
Never set eggs in two layers.
Rules for second and third weeks.
Temperature of working room.
The cause of failure.
The instinct of the hen.
To raise temperature quickly.
Use of woolen cloth and hot water.
Watch the damper and regulator.

Best Age for Breeders

Best results from year-old hens.
Hatching in February and March.
Hens from five and ten years old.
Winter hatched pullets quick moul-
ters.

Breeders for Broilers

Breeders for Exhibition

American Standard of Perfection.
Chicks from first eggs after mating.
Keeping careful records.
Use of leg bands.

Breeding in Line

Bad effect of in-breeding.
To insure good qualities of your
birds.

Brooders

Disadvantages of wooden brooders.
Brooder coop advantages in getting
fertile eggs.
Brooding without artificial heat.
Baby chicks outdoors in zero weather.
Large brooders a mistake.
Metal Mother first week in cold
weather.
Number of chicks in fireless brooder.
Use of fireless brooder.
Perfect conditions and better birds.

Care of Breeding Stock

Adaptability of our summer and
winter coops.
Hardening fowls to cold weather.
Must be protected from draughts.
Wintering breeders in barn loft.

Coop Construction

Of brooder coop.
Of summer colony coop.
Of winter colony coop.
Of combination economy coop.
Double winter coop.
Fireless brooder.
Feed hopper.
Galvanized iron trough.

Egg Production

Early laying pullets best producers.
Good points of a productive hen.
How to get large egg yields.
Large hens not best.
Laying in cold weather.
The color of eggs.
The hen for market eggs.
Measuring food bad practice.
Sprouted oats.
The rest periods.

Eggs When Prices Are High

Bringing the highest market price.
Hatching in winter.
Out-of-date methods.
Summer and fall chickens.
Natural breeding season.

Fertility

Fertility and feeding.
Fertility after mating.
Fertility after separation.

Results of change in mating.
Sure results after two weeks' mating.

Food

Cooked lean beef.
Cut clover.
Chick's first food.
Feeding the first three weeks.
Feeding from three to eight weeks.
Feeding from eight weeks to maturity.
Full crops at night.
Formula for wet mash.
Food for cold weather.
Green cut bone never given.
Green food at 15 cents a bushel.
Give hens all they will eat.
Hens properly fed.
Never feed grease except for fattening.
Oats spaded in dirt daily.
Straw on floor.
Sprouted oats.
Supply bulky food in the morning.
Water supply and egg supply.
Winter food.

Gapes

Grading

Green Cut Bone and Infertil- ity

Hatching

Get ready before ordering eggs.
Keep in advance of your business.
Hatching with hens.
Active hens the best setters.
Changing eggs in the nest.
Cleaning eggs.
Nests on ground no better than in
the barn loft.
Raising the chicks in our brooders.
Saving the chicks by removing the
eggs.
The causes of poor results.

Helping the Chicks in Hatch

Chicks properly grown can all be
saved.
How to save them.

How to Start

Buy the best eggs obtainable.
Foundation stock hatched in Febru-
ary and March.
Guaranteed fertility.
Starting with two pairs of birds.
Starting where you now live.

How to Use Coops

Large and Small Flocks

Egg production.
Advantages of small flocks.

Leg Weakness

Indigestion the cause.
Remedied by care in feeding.
Seldom occurs when chicks are on
the ground.

Lice

Put powder on brooder cloth.
Use of boiling water.
Use of wood ashes for hens.

Location

A combination for an acre lot.
Natural grit.
Sandy and gravelly soil.
Stony and lumpy soil to be avoided.
The new Philo plant and grounds.

Keeping Eggs for Hatching

Evaporation of moisture decreases
the vitality of the chick.
Germ killed by high temperature.
Low temperature not disastrous.
Natural position for keeping eggs
for hatching.
Not best to turn eggs daily while
waiting.
Temperature and evaporation.
Temperature.
Two weeks the limit for keeping
eggs to hatch.
Setting eggs the day they are laid.

Moisture

Evaporation while waiting for hatcher.
Excessive moisture produces too large
a chick for the shell.
Supplying moisture the last week.
Too little moisture and the results.

Pedigree Breeding

Banding chickens.
Expanding the leg bands.
Mating the birds.
Record difficult to keep.
Sixteen toe marks.

Plans for a Large Plant

600 coops on two acres to accommo-
date 10,000 chicks.

Poultry Helps the Garden

Mixing the fertilizer with soil.
Value of the fertilizer.

Pullets

Properly matured in space of one
and a half square feet.
Winter hatched pullets as breeders.

Results of Philo System

\$1,500 a year from 60 hens.
\$1,500 a year for market eggs from
1,000 pullets.
Average eggs hatched and chicks
raised.
Another estimate of profits, chiefly
from broilers.
Cost of starting a broiler farm with
60 lampless brooders, coops and
incubators.
Setting brooder-hatcher Dec. 10.
Plan of new grounds.
National Philo Poultry Institute.

Selecting Breeders

Advantages of selecting new breed.
As to the superiority of breeds.
Breed a matter of choice.
Making setters of non-setters.
Productiveness between rest periods.
Strain considered above breed.
The good breeding hen.
Width of hen and general make-up.

Selection of Hatching Eggs

Less than 24 ounces or more than 32
ounces per dozen never used.
Shape and color of shell important.
The test by sound.
Weight of 25 ounces per dozen pre-
ferred.

Sex Control

Selection of male and female.
To raise 70 to 90 per cent cockerels.
To raise nearly all pullets.
Vitality of male and female.

Testing Eggs

Theories without foundation.
To make a living from poultry.
Not a "get-rich-quick" scheme.
Ordinary good stock.
Prices of eggs and profits per hen.
Strict attention to business daily.

Two-Pound Broilers

In eight weeks.
Raised in space of one square foot.
Tender as squab when closely con-
fined.
The food and care of broilers.
To prevent leg weakness keep on
spaded ground.
Use of salt and of milk.
What investment and profit to ex-
pect.

Winter Quarters

Adaptability of houses already built.
Comfort of the fowl.
Importance of ventilation.
Keep flocks small.
Ground not so important for mature
hens as for young and growing
chickens.

Value of Sunshine

WILLIAM COOK & SONS

— ESTABLISHED 1873 —

Originators of All the Orpingtons

Box A, Scotch Plains, New Jersey

First Prize S. C. Black Orpington Cockerel, Madison Square, 1910, owned and bred by Wm. Cook & Sons, Scotch Plains, N. J., Originators of all the Orpingtons.

AS USUAL---We won many times more firsts than any Orpington breeder at Madison Square, 1910---thirteen first prizes. In six showings at Madison Square, we have won 103 first and 70 second prizes, more than seven times as many firsts as any other Orpington breeder. These are convincing facts that we have the best in the world and is why we are recognized headquarters for the best Orpingtons, all varieties. Many other winners were sold by us or hatched from our eggs. Over 12,000 first prizes won by us. Sooner or later you will buy from us. **Why not now** and avoid disappointment and waste of money?

Send 6c for Our Illustrated Catalogue

containing history and origination of all the Orpingtons, valuable hints on poultry keeping and mating list.

EGGS---From our winners and the finest Orpingtons in the world, \$20.00, \$10.00 and \$5.00 a setting.

We guarantee safe delivery and satisfaction on everything we ship and this is backed by a reputation of thirty-seven years' standing, this means something to you. Advice free. Inspection cordially invited. Trains met. Several thousand stock birds always for sale.

Going to Buy

FOUR FOR \$1

Four First-Class Poultry Publications Published in Different Parts of the U. S., at One-Half Price

American Poultry Journal - - - } **\$1.00**
American Poultry Advocate - - - } **Regular Price \$2**
Poultry Item and Commercial Poultry

AMERICAN POULTRY JOURNAL needs no introduction, as it is the oldest, largest and best poultry paper in the world. Is the leader of the poultry press, and now in its 41st volume. No poultryman can afford to be without it, as it has no equal.

AMERICAN POULTRY ADVOCATE, the great New York state paper published at Syracuse, and full of good reading matter, is always welcomed by the subscriber. Now in its 18th volume. It is conceded to be one of the best poultry papers published in the east.

POULTRY ITEM, published at Sellersville, Pa. Now in its 12th volume, and although a young publication compared to the others embraced in this offer, it is safe to state that Poultry Item is rapidly pushing toward the front. Full of valuable information and complete winnings.

COMMERCIAL POULTRY, published at Marseilles, Ill., is now in its 18th volume. True to its name, it instructs the reader on poultry as a business. Its volumes contain articles by excellent writers who contribute regularly and make it interesting for the reader.

When reading this do not lose sight of the fact that American Poultry Journal contains from 68 to 188 pages of interesting reading matter; that it has a strong corps of field men who report on conditions in their territory each month so that it contains the "newsiest" news of the poultry world. A single copy is worth more than we ask for one year's subscription to all four.

\$2.00 Value for Only \$1.00—This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address

American Poultry Journal, 358 Dearborn St., Chicago, Illinois

A Little Poultry and a Living

Is the title of a little booklet we will mail free. It was written by the author of the PHILO SYSTEM BOOK, who makes every one of his hens pay him a profit of \$50 to \$100 each.

Metal Mothers

**Our New Discoveries
Make Poultry Keeping
Easy and Profits Sure**

Our machines were used exclusively in the original Philo System plant, where over \$1,500 FROM 60 HENS IN TEN MONTHS has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our system of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

Valley Falls, N. Y., Nov. 18, '09.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—I have used your incubators, both the Cycle Hatcher and Brooder Hatcher, during two seasons, and found them very satisfactory, as they were easily managed and gave excellent results every time. The Brooder Hatcher makes a convenient place for brooding the little chicks when first hatched, before putting them into the fireless brooders. Very truly yours,

(Rev.) E. B. Templer.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—No doubt you will be interested to learn of our success with the Cycle Hatchers. We have cleared over \$960 running our hatchery plant consisting of 56 Cycle Hatchers. We are pleased with the results, and expect to do better the coming year. With best wishes, we are, very truly yours,

(Mrs.) C. P. Goodrich,
Elmira, N. Y.

Our 1910 Pattern Metal Mothers

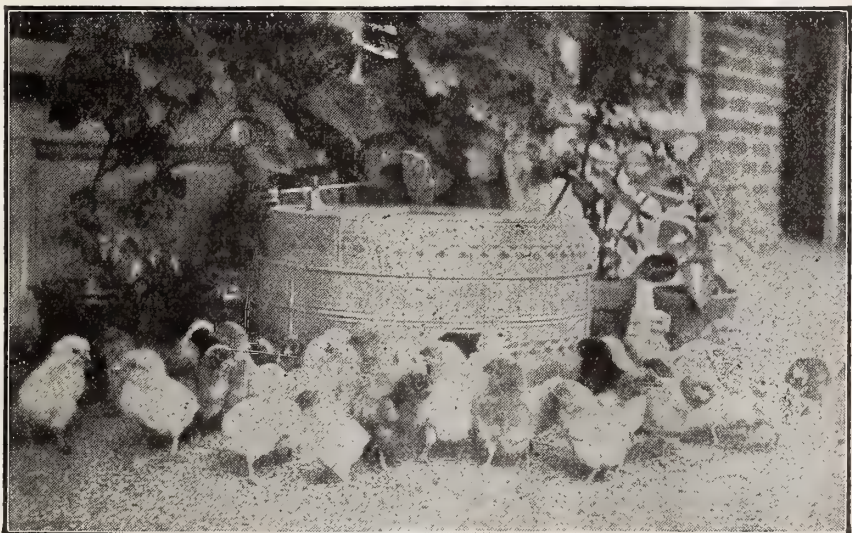

are the perfect results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic.

Large stock of machines at Oakland, Cal., our western shipping point. Write the Cycle Hatcher at the above address for Pacific coast prices.

One Metal Mother complete, \$7.50; two, \$14; four, \$24. One Cycle Hatcher complete, \$5; two, \$9; four, \$17; six, \$24.

The booklet "A LITTLE POULTRY AND A LIVING," fully illustrated and describing these machines, and a complete line of the most approved poultry appliances, mailed free.

Cycle Hatcher Co., 214 William St., Elmira, New York

PINE RIDGE FARM

BUFF, BLACK, WHITE AND DIAMOND JUBILEE

ORPINGTONS

Are the down-to-date, low set, blocky kind that are winning at the best shows in the country for us and our customers. We wish you could see our birds as we see them every day, then you would know how good they are. We want you to know that our Buffs are of that bright, even, golden color down to the skin, in hackle, wing bows, back and saddle, with rich, red eyes. Our Blacks are massive fellows with a lustrous green sheen that defies criticism.

In Whites we feel we must tell you that we have some of the best that were ever imported from England; the very cream. And in Diamond Jubilees. Well! We still claim the best that were ever shown. Now just a word about our record

At New York and Boston

The last three years we have won 80 regular prizes on our Orpingtons, besides cups and specials, and we have kept these winners right in our yards to sell eggs from, so that our customers could share with us the good results to be obtained from such grand matings.

Eggs for Hatching: \$15, \$10, \$7.50, \$5, \$3 and \$2.50 per 15. We have a mating sheet that describes our different pens and want you to send for one.

23rd and Arch Streets Philadelphia, Pa.

Twelve Months' Work in the Poultry Yard

By **W. Theo. Wittman**, Acknowledged by All to be One of America's Foremost Authorities and Judges

Starts you in January, and take you clear through the year—telling you just what to do to successfully handle your fowls in the safest and most economical way that is consistent with good business methods, to make the largest success possible with your fowls.

It doesn't tell you how to make two hundred dollars from twenty hens

but it gives you a short, boiled down, and up-to-date treatise on lines that are practical and can be executed with safety. The contents of this book are intensely practicable, and teach a method of poultry keeping exactly opposite to that which is complicated and unnecessary. **Price 25 cents.**

THE POULTRY ITEM

The largest Eastern poultry Journal, published at Sellersville, Pa., 68 to 140 pages monthly. Special breed numbers starts in September and continue until May, 1910. Tells you how to secure larger and more profitable returns from your chickens. Extremely helpful and valuable. Get a-going right in the poultry business. Many are making \$2.00 per hen each year. Are you? The Poultry Item will keep you posted on latest methods and poultry secrets. The Item stops when time is up. **Price 50 cents the year.** Order it now at the following special terms.

A Year's Subscription to The Poultry Item and Twelve Months' Work in the Poultry Yard, only 50c

First prize and color special at Cleveland, 1910

TANNENBAUM FARMS —“VICTOR” STRAIN— Barred Plymouth Rocks

Continue to keep in the front rank at the big shows and there is no reason why they shouldn't as they have been produced from lines that have been winning for the past several years. At Cleveland this year we won first and fifth and color special on hens and second and fifth pens. Our matings this year are second to none, as our “Victor” strain are so named because they combine high class exhibition quality with utility being exceptional good layers.

Our Columbian Wyandottes

Are also getting their usual share of high honors. At Cleveland we won second and fourth hens and second and fourth pens, showing none of our previous winners. At Madison Square Garden we won first on pullet and have added second cockerel and second pen at this same show to our breeding pens. First and second pullet and second cockerel at the Ohio State Fair are also among our list of winners. We have mated a few unusually choice breeding pens. Send for catalogue containing mating list, description and photos of plant, stock for sale, etc.

Winners For 17 Years Layers

Nixon's White Wyandottes

Have made good, not only for myself, but in hands of my customers. If you want deep round breasts, broad saddles and tails, pure white plumage, together with extra layers, write me. My yards for 1910 are mated with birds that conform very closely to new standard requirements and they are sure to produce winners if winners are produced anywhere. My yards contain Madison Square, Boston, Jamestown, etc., winners, or direct descendants. Eggs ready for shipment after January 15, 1910. Write to day for my literature.

Chas. Nixon, A. P. A. Judge and Member, Box 202, Washington, New Jersey

When You Buy Eggs from Blaker's Barred Rocks

You get them from females that are clean, snappy, narrow barred throughout, good in size and superb shape; have low even combs, rich bay eyes and nice yellow legs. Mated with them are elegant males like the one illustrated in this ad. Many are direct descendants of Madison Square Garden winners; others our great Kansas City and Parsons winners. At the big Kansas City show we were the only exhibitor winning in all classes, cock, cockerel, hen, pullet and pen.

14 Superb Matings for 1910

I was head poultryman and foreman for E. B. Thompson for two seasons and have mated my yards with the same care that I did the Great Ringlets, under Mr. Thompson's directions. All say my yards are the most skillfully mated of any ever seen in the west.

Eggs from our Finest Exhibition Matings, same as we set from ourselves at \$3 per 15, \$5 per 30, \$8 per 50 and \$15 per 100. From Special Selected Pens, \$5 and \$10 per 15. Incubator Eggs, \$2 per 30, \$6 per 100.

A. E. BLAKER, Box A, Route 2, Parsons, Kansas

To get eggs from matings of Barred and White Rocks, White Wyandottes and Golden Sebright Bantams equal to any in the United States. \$3.00 per 15, \$5.00 per 30, \$15.00 per 100. Size, shape, color, vigor and each free exclusive farm range.

D. T. HEIMLICH - - - Jacksonville, Illinois

CREGAR'S GOLDEN ROD STRAIN S. C. BUFF LEGHORNS

Our pens for 1910 are of unequalled quality. Every bird in these pens has been selected with the utmost care, not only for Standard requirements but for egg producing qualities also. Quality—not quantity is our motto. All our 1908, 1909 and 1910 New York, Chicago, Boston, St. Louis and Indianapolis, in fact scarcely a bird not a prize winner. Such an array of quality never before found in the yards of any single breeder. A few extra fine S. C. W. Leghorn males and females for sale. We are closing out our entire stock of White Leghorns and can offer the greatest bargains in America for high class birds. Write for mating list.

The Famous PEERLESS INCUBATORS & BROODERS

More than 30,000 in actual use. Every one of them hatching and raising a larger percentage, with less attention and less expense than any other made. No other machine has so many improvements—so many money savers—so many labor savers as the Peerless. Here are a few of the special features:

Automatic ventilation and moisture; cold-rolled copper tank; heat distributing bars; tandem, double-compound thermostat regulator; automatic lamp; acme trip burner with combined damper and flame regulator—this is the safest burner made. It saves half the time, labor and cost of operation.

My Lamplless Brooder—the greatest brooder success of the age. No lamp, no tank, no expense to operate. Raises a larger percentage of healthy, vigorous chicks than any other brooder on the market.

Either Knock-Down or Ready For Operation

I manufacture a complete line of Incubator and Brooder Supplies and fixtures; everything to repair or remodel your old machine or build new ones. I will also make to order anything special you may want in my line.

Send for my combined catalog and book of plans. It is free. It contains more than 100 photographic illustrations, showing step by step how Peerless Incubators and Brooders are constructed and how easily you can build them yourself. Whether you build an incubator or buy one ready made, you will save money by buying from me. Send for my free book today and learn all about the "House of Quality."

MORE PROFITS ON HOGS

My friend:—Have you hogs? Will you accept \$100 extra for feeding them?

Jones fed his hogs the same amount of corn that Smith did. Jones made his gain from 160 to 260 pounds. At 7½ cents a pound this made \$2.25 difference per hog that Smith got out of his feeding over what Jones did, just because Jones did not know how. He was not progressive and Smith was.

Jones' 50 hogs brought him \$975, while Smith's 50 hogs brought \$1,087.50. Smith's knowledge therefore was worth to him \$112.50. It shows that knowing how makes success not only for the farmer as well as the lawyer and banker; it enables them all to make money. This tip ought to be worth something to you; some will make it worth \$100 this fall.

It isn't what the hog eats; it is what he digests that makes the money. Experience is our best teacher. We are all in a school, learning. We could preach you a great sermon on this; but you have no time for words or arguments. You want quick money. It costs the man who first proves an undiscovered fact (which, of course, always existed), but the man doing so is a benefactor as well as an educator of his fellow-farmer.

The principal cost of producing pork is the feed. Prof. Dietrich says "90 per cent of the farmers have nearly everything to learn about how to feed a hog to get the most out of him at the least cost." We can help every one who will be helped to progress; the others will continue to lose the hundred dollars a year.

"For \$1 we will send you the American Swineherd, the aggressive and progressive acknowledged leader, devoted to the swine industry, for 4 years, and will give you as a premium the Progressive, Scientific Feeding Formula for increasing the gain while feeding, fattening hogs, a half pound a day per hog over the customary way of feeding from the same feed given. This hygienic secret made the discoverer a fortune fattening hogs.

It is simple, sensible and just as easy feeding as the old way. Yet it is progressive and scientific. It is of such real value that no sensible man can ignore it. It has been proved so conclusively and repeatedly that we have an abiding faith in it and agree to make good or give money back, making you absolutely safe.

This fair offer is good for 10 days. We also give additional premium, copy of the Pig Feeder's Manual, itself worth double to any hog raiser what you pay us. The paper stops at the time paid to.

RIGHT MANAGEMENT OF THE BREEDERS

A Few Rules for the Beginner—Care During the Moulting Period—Plenty of Fresh Air in the House One of the Main Requirements—Foods Most Conducive to Strong Fertility

Written for American Poultry Journal by Rev. C. E. Petersen, Bridgton, Maine

IT IS generally supposed that it is time enough to make preparations for breeding some time during the late winter months; but to the experienced breeder this is rather late, as he is busy all during the growing season to select the most promising birds and to give them the best of care, that when finally mated they may give him the very best results.

Young stock needs correct management, and from start to finish this ought to be accorded it. Chickens that start in life the victims of ailments caused by improper methods may be saved, but will never make the strong, robust breeders that must be had in these days of strain-breeding, where new blood is seldom or never introduced in the way that the past breeder of poultry understood this term "new blood."

We can only lay down a few rules to the beginner, but they are the experience of many years, and if followed will help the beginner to better success with his fowls, whatever breed he may have taken up.

All during the season of growth, feed only dry food, and give the chickens all the liberty it is possible to give them. Feed several times during the day, never enough of one kind of grain to tire their appetites, and give plenty of room in their coops, all of which should be well ventilated, wholesome and clean; and where it is possible to have the birds roost out of doors during the night without the fear of being molested, nothing better could be done to secure birds of a good strong constitution. We are now writing advice for the young stock that is growing during the summer.

Give the old fowls that are to be kept over for another season all the run of the place if it can be done; if not, give them plenty of green food and a large yard, clean quarters, plenty of fresh, cold water, and after the breeding season take away the male bird.

During the moult, give plenty of fat meat, or soft food with a little linseed oil mixed with it, and a spoonful of carbonate of iron to every dozen fowls, three times a week, and you will be surprised to notice how easily the birds will shed their feathers and what a splendid new plumage, glossy and beautiful, will be the result of this treatment.

During the fall and winter let the houses be so constructed that they will facilitate health, comfort and an opportunity to exercise, without which not much success can be expected.

In the fall we have about six inches of sand and gravel put all over the floors of our houses, and the fowls enjoy this very much and it is conducive to health and cleanliness.

On fine days we open all the windows from the top and let the birds out of doors, even though snow covers the ground—a fork or two of straw scattered over the snow. Clean chaff on the floors, clean out frequently, at least three times a week, and at the same time we attend to the dropping-boards, and we have no trouble with frosty or damp houses during the winter months.

Our houses are made with a pitch roof, single-boarded and shingled, with a good-sized window to let in light and sunshine; and here in our cold and rugged old state of Maine this seems to be all-sufficient, and with me has proven itself so by giving me a lot of healthy, happy, contented, winter-laying

fowls, and with the kind of a winter where the thermometer will run down as low as 30 degrees below zero, and where zero weather is the rule most every night, and not the exception.

Our roosting platform is curtained in front, and on very cold nights we lower this curtain. With this kind of housing, and without any direct ventilation, we have never had a single case of roup in our flock for twelve years. There is nothing that succeeds so well as success, and therefore we intend to keep on in the same old happy way and not bother ourselves with "improved" methods of ventilation.

The feeding problem is not so much of a problem as some try to make it. Good sound food of most any kind in a healthful variety will answer the purpose. We ought to avoid extremes of any kind if best results are to be obtained, and after having continued for any length of time a certain bill of fare it should not be changed for some other all of a sudden, as more than likely it would cause a considerable falling off in the egg-production. Where eggs for breeding purposes are to be produced, care should be taken to avoid anything like forcing. And for that reason the hot mash has no place in the bill of fare daily given to the birds selected for breeding. Forcing for eggs is the bane of the breeder, who, in so doing, may increase the daily output of his hens, but at the same time decrease its quality and fertility.

Strong fertility should be the main object to be attained in the eggs coming from the birds selected for breeders, and no man who has his best interest at heart will neglect this all-important feature, and particularly so if those eggs are sold for hatching purposes to others. Overmating is another thing constantly done so as to produce more eggs from a pen in which some winning bird is the sire.

Where such measures are resorted to so as to increase the income, both in eggs and money, to the breeder, failure only can be expected, as the eggs will not be very strongly impregnated, and, in consequence, hatch poorly. We have always maintained that no sire should reign over a breeding-yard of more than from five to eight females if strong fertility and strong chicks are wanted.

The grains we have found most conducive to strong fertility when used as a food are oats, wheat and corn. And the last we have always used sparingly, as sooner or later it will produce more fat than is necessary for a laying breeding hen to have on her. We have obtained excellent results by mixing two parts of oats, two parts of wheat, and one part of cracked corn. Added to this we have given meat in some form, scraps, ground bone, and this last is a fine food, but not absolutely necessary, and is often found stated by those interested. Green food of some kind should be given ad libitum. Cabbage, clover, apples, roots—in fact, any kind of green food is acceptable at this time of the year. Plenty of water with the chill taken off should be before them, and if a good supply of eggs is wanted, do not neglect this matter. It will have to be done several times a day during some of our cold winter days, and is more or less trouble, but it must be done—a hen will produce some eggs on most any kind of food, but she will not produce any on ice water.

Grit, charcoal, and a good dust bath—and there we have everything necessary for success in the breeding pen as far as the production of strong and livable chicks are concerned, for we of course take for granted that the eggs laid are for hatching purposes.

As to the amount of food to be used, that will depend on the breed and whether the hens are in full-lay or not. If pullets, go slow and watch out carefully so that if they are not laying you will not feed so as to fatten them, which is very easily done at this time. If the flock is laying first-class, give them

all they will eat by scratching for it, as it is almost impossible to overfeed a laying hen. All the rule we can lay down, however, is, use common sense in the matter of feeding as anywhere else, and success will crown your efforts.

What about stimulants? Well, we came near forgetting

First prize White Wyandotte cock, Toledo, Ohio. Bred and owned by George Burkdoll, West Unity, Ohio.

about this matter, for the simple reason that we never use them.

Some of our best writers on poultry culture deplore the old-fashion of "the peppercorn," and one of them (Mr. Lewis Wright) on the same page advises the use of "eggs and brandy administered through a delicate glass tube." Mrs. Arbuthnot's balance sheet, contained in her otherwise excellent little work, "The Henwife," shows £5 5s a year for ale and beer—which was probably not all drunk by the fowls. Mrs. Loudon's ideas in her management of little chicks is rather peculiar. She writes that "Bread-crumbs should be soaked either in wine to strengthen them or in milk to give them an appetite." The peppercorn was bad, the wine worse, the toast and ale little better; but the brandy, even through a

First prize S. C. Buff Leghorn pullet at Chicago, December, 1908. Bred and owned by H. Cregar & Sons, Forest Park, Ill.

delicate glass tube, was the worst or all. And if we scan the advertising pages in our poultry papers we find that matters are growing worse instead of better, as poultry patent medicines are every year growing more numerous and are as powerful for good as they are potent for evil.

Stimulants and so-called "poultry tonics" have no place in

any well-regulated poultry establishment, and certainly not as an accessory to the breeding yard.

A healthful, normal condition of the fowls, with some inducement to exercise their natural proclivities of scratching, is all the tonic we have found necessary. And where a healthful, normal condition is not to be found, a change of conditions is more likely to produce it than a dose of patent medicine.

Do not change the egg boxes or laying places from one place to another, as it retards the laying and more or less eggs will be dropped on the floor and induce egg-eating.

Watch out carefully if the male attends to his duties and leaves no female untouched, as sometimes a male will take a dislike to one of his consorts, and such a hen becomes, of course, useless as a breeder in that pen.

New females should not be introduced into the pen after it has been mated up for some time, as it is sure to cause fighting all around, and this may continue for several days, and is, of course, not conducive to egg-production, and I have known cases where severe injury was inflicted on the female which by the other inmates of the pen was considered an intruder.

Above picture is a good representation of the type of Black Orpingtons as bred on Cairngorm Farms, of which Mr. W. C. Boyle, of Cleveland, is owner. They have issued a fine mating list which gives also a record of prizes won.—L. Stahmer.

Some of these seemingly minor items should be taken into consideration where best results are of a desideratum.

On fine days, shovel off the snow outside the houses, scatter some straw, and let the birds out in the open. We did this whenever the weather would permit for a number of years, with excellent results, and are doing it still, and can see no reason to discontinue it, even though it may be truth that it will lessen the production of eggs, more or less. We are now talking about fowls for breeding, and not about fowls for increased egg-production.

I said "may be," for I do not believe that letting poultry out in the winter is detrimental to egg-production, as has been recently stated. Fresh air, and plenty of it, if not administered through cracks in the poultry house, is as much an essential to egg production as are food and shelter. A few hours in the middle of the day, say from 11 to 1 o'clock, will, even in zero weather, be beneficial, if the zero weather be beneficial, if the sun is out and shining, and shelter from strong winds provided. With all of it, mix a little discretion, and all will be well.

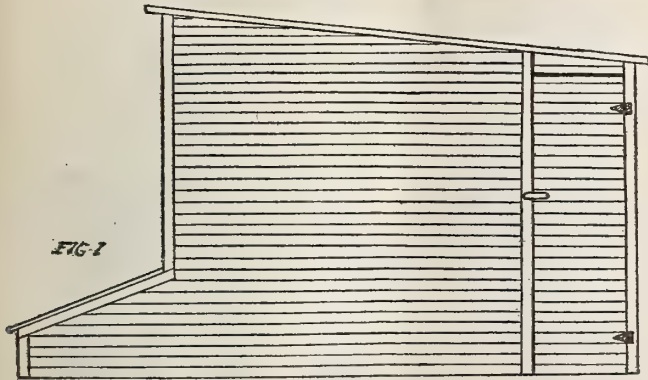

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to Moody Gannaway, Mattoon, Ill., and the second prize to Esther Stratton, Houstonia, Mo.

A WELL-LIGHTED BROODER HOUSE, HAVING INDIVIDUAL HOVERS.

NOTHING is more essential in connection with a brooder house than plenty of light, unless it be fresh air. They go hand in hand. The brooder house I shall attempt to describe has no waste room; is built with no unnecessary and foolish expenditure of money; has light in abundance, and is so arranged as to permit of all ventilation necessary. It is equipped with hovers which are made to fit any house, and which play the part of the sensible old hen about the best of anything yet devised. These hovers may be

bought ready to attach, and the operation is easily performed. In the house herein planned the lamp rests in the hallway and the heat is carried to the hover through a short tube.

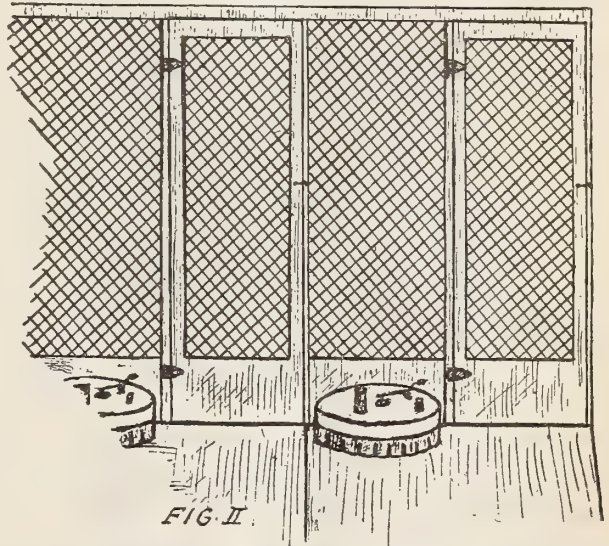

As shown in Fig. 1, this house is built of drop siding, the front, however being almost entirely glass—shown in Fig. 5. Window sash form the roof of the low front section, and Rubberhoid or some similar roofing covers the main section, the roof lying too flat for shingles. With such a roof there is no waste overhead space. The lowest part of the main building may be built just high enough to accommodate the proportions of the average man, unless the owner be above average height, in which case, in order to avoid unpleasant contact of the caput hominis with the roof, I would advise building it some higher. Then the highest point in the roof need be but slightly higher than this, giving it a minimum pitch. In this way less siding is required.

A hall extends through the building at the extreme rear, having an outside door at each end.

Fig. 2 illustrates the partition separating the hall and chick apartments, and at the same time makes plain the position of the hover in each pen. This partition has a 2-foot door opening into each pen at the left of same as you face to enter. The hover lies at the right of the door and directly behind it when opened inward. Wire netting constitutes almost the entire partition, extending to within a foot of the floor, where

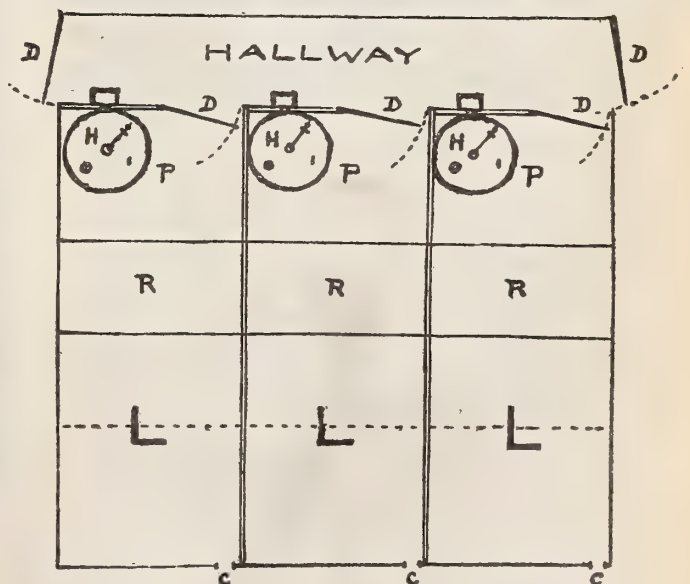

a 1-foot board limits the chicks to their quarters and prevents them from slipping through the meshes of the netting, which they would do if a 2-inch mesh were placed at the bottom, next to the floor.

Fig. 2 represents the entire width of one pen and a portion of another, a dividing partition lying directly between hover in one pen and the swinging side of the door in the next

adjoining. In Fig. 2 this partition is not shown, its position merely being indicated by a line about the center of the floor. (See double lines in Fig. 3.)

In Fig. 3 the hovers are represented by the letter H, and the doors, inside and outside, by D. The platform or elevated portion of the floor, P, upon which the hovers rest; R, the

runway sloping up to this elevation, and L, the lower level of the floor, which extends to the front, where chick exits, C, are provided, to be opened when chicks are old enough to run out into the adjoining yards. These are all shown in Fig. 3. The

dotted line extending across the figure represents the juncture of the low, glass-covered portion with the main house.

Fig. 4 is a cross-section. In it we see the netting partition with board at the bottom. The dark area below this board is a 6-inch space between the ground level floor and the hover platform and runway.

The height of the house is 6 feet in the rear, 7 feet at the highest point, 2 feet at highest point of glass section, and 1 foot at the lowest point, at the very front.

Fig. 5 is the front, with its formidable array of windows. The upright window sash are 3x4 feet and are hinged at the bottom, that they may be opened inwardly at the top for ventilation. One sash to each pen. The sloping sash are 3x8 feet, one sash to two pens, and are hinged at the upper edge, to permit of easy cleaning of this low section of the house. Wire netting tacked upon removable frames retains the chicks while the sash are raised as high as desired for airing the apartments in warm weather. These frames are placed beneath the sash so as not to interfere when the sash are down.

The dimensions of the hover platform are 3x4 feet; of the runway, 2x4 feet; of the lower level of the floor, 4x5 feet. The hallway is 2 feet wide, making the building 12 feet from front to rear. Each pen is 4 feet wide. The hovers are about

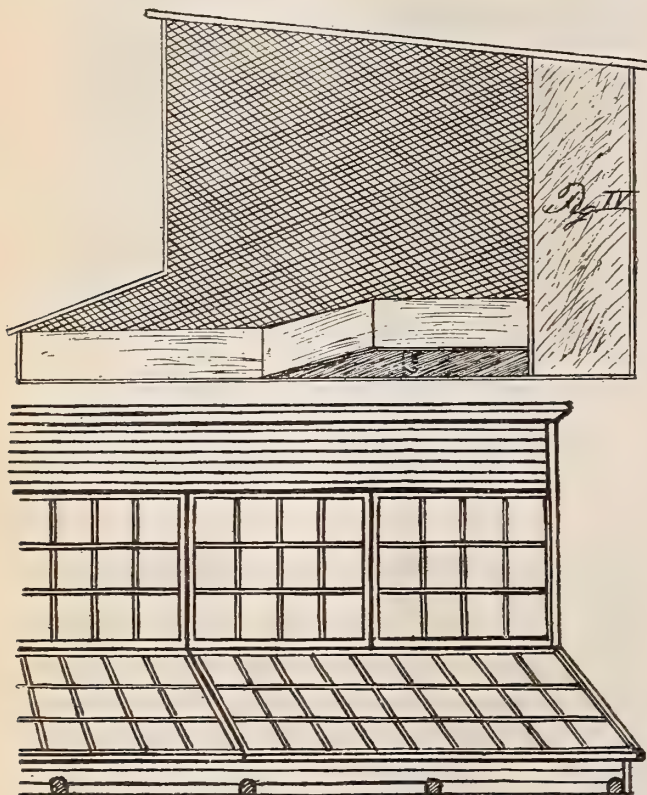

FIG. V

2 feet in diameter. Exits, C, are 4x4 inches, having hinged doors.

When chicks are too large for the hovers, roosts may be placed in the pens if desired. Moody Gannaway.

Mattoon, Ill.

HOW TO PREVENT GAPES.

THE losses of little chicks from gapes are a great drawback to the chicken business. What is more discouraging than to see your bright, lively little puffballs, which you have tended so carefully for their first week or two, begin that steady, regular upward stretching of the neck—gaping? And if by chance—and a great deal of work—you happen to cure a few, their vitality is so depleted that they can never grow up to be the chickens that they should have been.

But gapes can be prevented—99 per cent of it—cheaply, easily, even though the chicks have access to the worst gape-worm-infested ground! The secret is lime, or rather in the method of using lime. This is the way to do it, and if these directions are carefully followed, gapes need never bother you. Take a long, narrow box of heavy pasteboard about 12 inches deep, 3 inches wide and 2 inches thick. Some of the heavy paper cartons in which come large bottles of patent medicines

are of suitable shape and size. An empty Pratt's Poultry Regulator box, 25-cent size, is ideal. The box must be open at one end and tight everywhere else. Fill the box about one-third full of dry, well-slaked lime. When you go to fasten up the chicks for the night, take the lime-box with you, and, holding it at a slight angle, but not enough to make the lime run out, shake it gently, at the same time knocking it against

A noted S. C. White Leghorn winner. Bred and owned by Harmon Bradshaw, Lebanon, Ind.

something, till the air of the coop, or wherever the chicks are confined, is filled with the fine white lime-dust. Then shut them up closely to breathe the lime. The object is to get all the air of the chicks' quarters filled with lime and to confine this lime-filled air so they will have nothing else to breathe. Of course if the weather is hot one may go around after half an hour or so and give them a little ventilation. The treatment can be repeated in the morning, but at night is generally enough. But it must be done every night; as "Eternal vigilance is the price of liberty," it is also the price of freedom from gapes. Begin the treatment as soon as the chicks are settled in their regular quarters; at least by the time they are

Packing room and pigeon loft on Waterview Poultry Yards, Hempstead, L. I., N. Y.

three or four days old, or when they begin to go on the ground. It is not necessary to put any lime on the floor of the coops or anywhere else except in the box, from which it must come forth as a cloud of fine white dust. The shaking of the box is something of an art, but with a little practice one can soon learn to make a fine lime-dust without spilling

the lime. The treatment should of course be continued until the chickens are too old to have gapes.

We have followed this method for years, with unvarying success. Last year one of our neighbors who had in former years lost great numbers of chicks with gapes decided to try our plan, and had not a case of gapes until she was called away from home for a few days and the liming was neglected.

The only trouble with this treatment is its simplicity. To an experienced poultry-keeper who has tried many expensive and troublesome gape remedies, with poor success, it sounds too easy. It is "to the Greeks foolishness." And then they say, "Oh, I've tried lime; it's no good." But how have they tried it? By putting it on the ground and on the floors of the coops, not remembering that the seat of the gapes is the chick's windpipe; and in order to cause the lime to reach that windpipe, it must be in the air which the chickens breathe.

Houstonia, Mo.

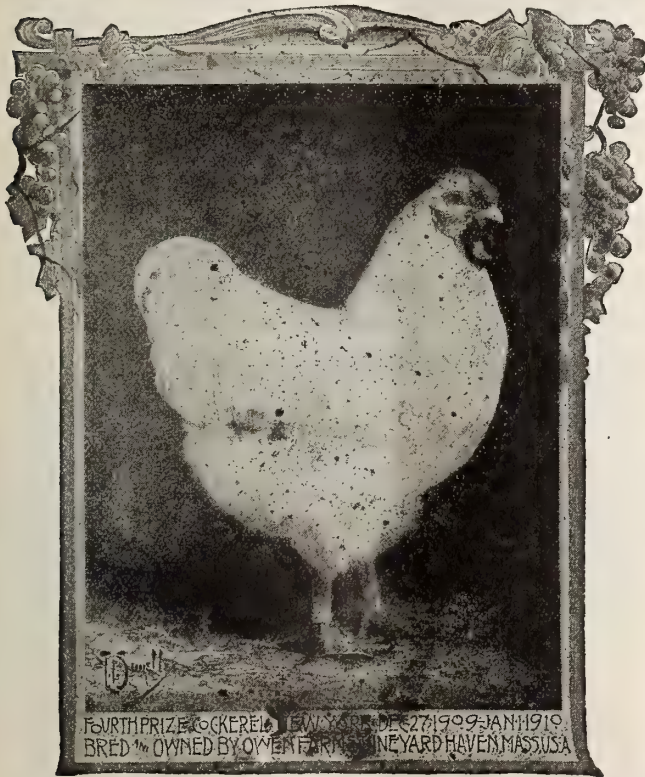

Esther Stratton.

POULTRY FOR PROFIT

IN our day, all subjects are looked upon from the standpoint of profit. He who starts in the poultry business, starts with an idea of the profit to be derived therefrom.

Convince him that there is no profit in the business, and he is sure to adopt something else. If it were not for the profit derived from growing poultry, there would be but very little raised.

There are some men who raise poultry for the love of the

birds. I know some men who would raise chickens if they knew they were doing it at a loss; but even though we love the birds, and love to see them around, we are apt to love them still more if they are paying us a good profit on their care and maintenance.

In order to make poultry raising profitable, there are a number of things to be looked at and which we should thoroughly understand.

First—Housing. No poultry can be profitable unless properly housed. The house should be light and airy, yet without draughts, and yet with a dark corner for nest room—hens prefer a shaded spot to lay in—free from dampness; warm enough for comfort in winter, yet cool enough for comfort in summer; plenty of roost room.

Hens in winter will require about six inches per hen on the roost, as they love to get close together that they may draw heat one from the other. In summer they will scatter in order that they may keep cool; so if you have fifty hens, it is advisable to give them roost room for seventy-five or eighty.

I am not going to give directions for building a house in this article, although I have had a wide experience in housing

poultry, but I am more on the subject of how to make poultry profitable, and housing is the first point to look at.

The second is how to avoid mortality in the chicks. The old-fashioned way used to be: Mix up some corn meal dough in

Harmon Bradshaw, Lebanon, Ind., and one of his celebrated S. C. White Leghorn winners.

cold water, dump it on the ground and leave the chicks to do the rest.

Experience has taught me that a dry feed for young chickens not only avoids that dread disease, bowel complaint, but starts

them along with a more rapid growth. I feed cracked rice. My chickens get nothing else after the first feed, which is bread and milk—bread merely moistened, not soaked—for ten days. Then I feed pin head oat meal mixed with the rice, wheat when they are big enough to eat it, an occasional feed

of barley which has been heated in the oven, and the sharp points of the hulls rubbed off.

Feed the young chicks five times a day, and divide the time evenly. I feed at six and nine in the morning, twelve o'clock noon, three and six P. M. Then I scatter a little light feed in the trough in case the chickens are up before I am. Cool water three times a day.

I take old crockery and pound it up fine, scatter it around my coops that they may have plenty of sharp, fine grit. No glass; it is dangerous.

Chicks prefer white grits, therefore you will find the crop and gizzard well supplied with white sand in chicks that are allowed to run at large.

Under this system of feeding, he who has never tried it will be surprised at the rapid growth.

This is one way to make poultry profitable; but one will say: My hens are weakly and breed weakly chickens. Now, how can I get over this? The most simple thing in the world. Discard all narrowhipped hens; discard all hens as breeders that lay a long egg. Pick for breeders, hens with broad hips,

ply of green food—no worms and bugs, no more animal food—the egg supply falls off.

Now, how shall we keep up the production of eggs to make it profitable? The answer is simple. An abundance of green and animal food. An onion fed once in a while to keep up

An unusually fine specimen of Ira C. Keller's Golden Wyandottes. Seldom will you find a better laced hen than the "Queen of Brookside," and winning first prize at the late Cleveland show was easy for her.—L. Stahmer.

rather coarse head—unless you are breeding for the show room—and hens that lay a medium sized, short, round egg. Don't pick your biggest eggs or your smallest. Best results come from the medium sized eggs.

I know an old man in this town who is now out of the business, who used to produce eggs as much alike as peas out of the same pod, as far as size and shape was concerned. They would vary only in color. I have known him to get from three to five cents a dozen over the regular market price, on account of uniformity of size and shape.

Now a word on egg production.

It seems to be a hard thing for the majority of people to get a fair production of eggs in the cold weather. Well, I wonder if they stop to think that in the winter time they must furnish some of the material that nature furnishes in the summer time. A handful of grain may be all right in the summer time, because nature furnishes green food and animal food, such as bugs, worms, grasshoppers, etc. Now, when the cold weather comes, and they are cut off from their sup-

TURKEY RAISING

Preparing Turkeys for Market—Feed and Free Range—Care of the Mother Turkey—Feeding the Young Poults—Preventive of "Blackhead"

Written for American Poultry Journal by J. C. Clipp, Saultillo, Indiana

TOO many turkey growers have the idea that just before Thanksgiving is ample time to begin preparing their turkeys for market; but from several years of careful breeding, with close observation, I have discovered that this practice was a mistake, provided we wanted our turkeys large for the Thanksgiving market; and no other market, I find, wishes as large turkeys as the Thanksgiving market, except the fancy exhibition trade. As Christmas requires less turkeys than Thanksgiving, we make a special effort to get what market turkeys we have to offer ready for the Thanksgiving trade, because, as a rule, it pays more than any other

market for large, fat, plump turkeys; yet it is not always the best market, as it will be remembered that only last season the Christmas market afforded a better price for all grades of turkeys than the Thanksgiving markets. However, it will pay to make special effort for the Thanksgiving market, and when the event arrives, if circumstances and existing conditions indicate for Christmas, we have the turkeys in prime condition to run over a few weeks longer for this promising advance in prices. You will find that instead of beginning to prepare the turkeys just before Thanksgiving, it will pay you to begin just as soon as they are hatched. Remember that the first two months of a turkey's life is the most critical time, and the feeding of these two first months greatly determines the condition of the turkey at market time. It matters not what market you expect to consign to, you must have your turkeys in first class condition in order for them to bring the

top price in the market. I don't wish to convey the idea that we must feed the poults heavy at this age in order for them to develop into prime specimens, but they must be fed intelligently and just in the proper amounts. Turkeys require but very little artificial foods if on range, and it is almost useless

First prize White Wyandotte pullet, St. Louis. Owned by F. Gage Cutler, Carthage, Ill. This was probably the largest and finest White Wyandotte pullet class shown in the United States this year.

to try to raise them otherwise than on liberal free range. I find that if we can tide the poults over the first two months of their existence, we feel assured of being able to market the majority of poults we hatch. It is not wisdom to feed the poults a heavy fattening ration from the time they are incu-

EL RENO, OKLA.

A prize-winning R. C. R. I. Red hen. Bred and owned by R. B. Bretz, El Reno, Okla.

bated until they are marketed. If you attempt such practices even if it is dry, as lice multiply very fast on turkey poults up to the matured age. Feeding on heavy fattening foods does not agree with poults, for the reason that they are of a

wild nature and will not stand for excessive artificial feeding. All that is necessary in raising turkeys is to provide them unlimited range and keep them free from lice. If you give them up to the management of the mother turkey you will find they will free themselves largely of lice by dusting, if the

One of the winning White Wyandotte cockerels at the late Cleveland show. Bred and owned by the Co-operative Breeding & Hatching Co., Tiro, Ohio.

weather is dry; but if the spring is wet and damp, lice will soon overcome them and death will claim them as its own. It is not good management nor judgment to allow the poults to run at large without any attention whatever regarding the lice, even if it is dry, as lice multiply very fast on turkey poults

One of the breeders of F. S. Nicholson, Otisville, N. Y. A descendant of many generations of winners at such shows as Boston, Hagerstown, Troy and Johnstown.

and will possibly increase faster than nature will annihilate them with dust from mother earth. The feed is not so important as the care and management. If the poults have the

range and are mothered with a turkey mother, they will procure quite enough food from the fields, with but little artificial feeding. It is the overfeeding that kills turkeys, and not hunger. Poults must have some feed and special care during the first ten days of their existence, but after they can easily follow the mother hen they will require but very little feeding artificially. Wheat bread soaked in milk seasoned with pepper is about the best ration we can give young poults. As field and weed seeds are their natural grain food, I begin with feeding the prepared chick foods as early as possible; in fact, I feed it or place it before them about the third day, so that they will learn to pick at it and learn that it is good for them, and within a very short time I have them well on to a dry grain ration, which is much better for them than any wet soft foods ever given them. I am not much in favor of soft foods of any kind for poults of any age. Hence, I lose but few chicks or poults that are hatched the natural way, from bowel troubles. The very best thing we can give poults or chicks is a liberal amount of charcoal and broken-up wall plaster. Turkeys will eat readily of mortar or wall plaster,

which is exceptionally fine for them, as well as charcoal. The hotter the weather, the more charcoal or lime they should have. In the fall, when preparing for market, feeding freely on corn, charcoal and wall plaster broken up fine, is a great saving of grain and prevents bowel trouble or "blackhead." Nothing is more provoking or more disappointing than to hatch off a fine lot of poults and have them all die from overfeeding or killed by lice. Begin right at the very first feeding to get your poults properly matured and well fattened for the Thanksgiving market, and you will find your turkeys will be much plumper than they would otherwise.

THE BUYER VS. THE SELLER

IF we would listen to some people they would have us believe that all poultrymen are dishonest. This I am glad to say, is far from the truth. In fact I believe there are very few poultrymen that want to be deliberately dishonest. There are a few I will admit but they are scarce and I want to tell you right here that there are thousands of honest men and women in the poultry business—men and women that want to do what is right with their fellow men and be right with God. If we are right with God it will not be hard for us to be right with our neighbors and fellow men.

Show me a man that loves God with all his heart and I will show you a man that is doing all he can to make others happy and a man that loves his neighbors and friends and I might add his enemies. On the other hand show me a man that is continually fighting with his neighbors and I will show you a man that don't care whether he pleases God or not.

It is the same way in the poultry business. If a man wants to do what is right he will not be fighting with his customers all the time.

Many thousands, yes, millions of eggs for hatching, will be sold this month and next. Many buyers will be more than pleased with results and many will be very much disappointed. When a man gets beat it is most generally his own fault. This is not always true but very often is the case. Don't think that everyone you deal with is going to try and skin you. We know some people are always so afraid of getting beat and as a rule these are the very ones that do get beat.

I feel sorry for the man that thinks everyone is dishonest but himself. I would hate to have such a poor opinion of my friends and neighbors.

Now, when a buyer purchases a setting of eggs from a

letter. This is often done, but nothing ever gained by it. If you want a square deal yourself you should be willing to act square with others and the man or woman that writes an insulting letter is not doing what is square, by a long shot. If you have reason to complain and feel that you must do so just sit down and write the breeder a real nice letter telling

WHITE HOLLAND TURKEYS.

First and second hens, New York, 1909-10. Royal Farms, Little Silver, N. J.

him in a decent way that the hatch was a failure. If he is half square he will be glad to make good and willing to send you another setting at half price or probably send you good eggs for the infertile ones if you will return them to him. It is hardly fair to expect a breeder to send you another setting free unless he has some way of knowing that the eggs you got were infertile. You must remember that there are dishonest buyers occasionally as well as a black sheep among the breeders and it is hard for a breeder to tell who he is dealing with. Sometimes we get reports of poor hatches or "all eggs infertile" when they are hatching well at home. Such reports look rather dubious but, of course, when a breeder don't make good there is always a multitude to yell "dishonest," so the poor breeder has to either send more eggs when probably he is already behind on orders or else make good some other way.

There is not one breeder in a hundred that don't want

FIRST PRIZE GOLDEN WYANDOTTE COCK CLEVELAND 1909
BRED AND OWNED BY
IRA C. KELLER

PROSPECT O.

breeder he is very apt to expect too much. Sometimes I think customers expect eggs to hatch better when they have been shipped a hundred or perhaps a thousand miles than they would expect eggs to hatch that were not shipped at all. It seems to be human nature to expect too much but we should not be unreasonable in our demands. Don't expect the earth. If you raise a good pair of fowls from a setting of eggs you have your pair at a very reasonable price. If half of the eggs hatch after being shipped a long distance you have no room to kick. We have known nearly every egg to hatch after they were shipped a great distance and such cases are quite numerous. If, for any reason, you fail to get a fair hatch you should make sure that it is not your fault before you complain to the breeder. Very often breeders are "roasted" about poor hatches that is not their fault at all. If your hen does not set well, you must remember that this is no fault of the breeder's and you are not doing what is right by asking him to make good in such a case.

Don't get high-strung and write the breeder an insulting

BUFF PLYMOUTH ROCK.

First cock, St. Louis, Mo., Dec., 1909. Bred and owned by W. J. H. Goetz, 1150 Cadillac Ave., Detroit, Mich.

to please his customers and nearly all of them strive to do so. Now when you do get a good hatch it is your duty as an honest person to write the breeder of whom you bought your eggs and thank him for honesty in sending

you good eggs. Every breeder likes to receive such letters from his customers and when you are pleased "say so."

Now, Mr. Breeder, you should do your part as well as the buyer. You should never be satisfied to have a displeased customer. I don't care if you are in the right you

First prize S. C. Rhode Island Red cockerel at Huntington, Ind., January, 1910. Bred and owned by Longfield Poultry Farm, Bluffton, Ind.

had better lose money by it than to have one displeased customer. Always try and put yourself in the other fellow's place and see how you would feel if you were in his place.

BUFF PLYMOUTH ROCK.

First pullet at Detroit, 1909. Bred and owned by W. J. H. Goetz, 1150 Cadillac Ave., Detroit, Mich.

We remember once of a man that purchased a setting of eggs from us that had been very unfortunate in his past experience in buying eggs for hatching. I assured him I

would do what was square, so he sent me his order. I shipped the eggs and when he received them the express company had in some way jammed a hole in the basket. The eggs hatched him only one chick if I remember right, and of course he was disappointed. I offered him another setting at half price but he seemed to think this was only more bait, so I sent him a setting free, from which he got a good hatch and today he is one of the best customers I have. It pays to go a little more than half way. We have often lost money just in order to please a customer and in the end I feel I done right. What would you have done brother? Would you let him be displeased? It never pays.

Remember a satisfied customer is your best advertisement. You can't afford to have enemies. They will do you harm but a satisfied customer will do you good. It often pays to put in one or two extra eggs and I find a customer is very grateful for such little acts.

Now, in conclusion, I want to say to both buyer and

GOLDEN ROD.

First Buff Rock pullet, Kansas City, 1909. Bred and owned by E. L. Delventhal, Warrenton, Mo.

seller be reasonable. Use good judgment. Don't complain unless you have good reasons. Do your part and try and make it pleasant for the other fellow and I assure you it will be easy for you to get a square deal and get a good profit from eggs bought for hatching.

Mercer, Pa.

Plummer McCullough.

WHITE DIARRHOEA

WHITE diarrhoea has swept away more young chicks than any other one disease, at least in this section of the country. Every season, especially late in the season, they die by the thousands. After it once gets headway there seems to be no remedy, but there is a preventive.

A neighbor of mine was making a success of poultry and was gaining considerable ways up on the ladder called poultry fame when white diarrhoea struck the plant and the ladder collapsed. His young stock died by the hundred until he had lost more than 80 per cent of his chicks.

My own stock was attacked and I lost more than my neighbor, almost my entire hatch of over 500 chicks. What did survive were weaklings. We laid the cause on the incubators,

brooders, feed, parent stock and goodness only knows what else. Generally the incubators get credit for the trouble, very often the brooders, too many in one compartment, wrong kind of feed, too much water, all sorts of causes. Some or all may cause bowel complaint, but not white diarrhoea—it is a germ that causes it and is strictly a germ disease.

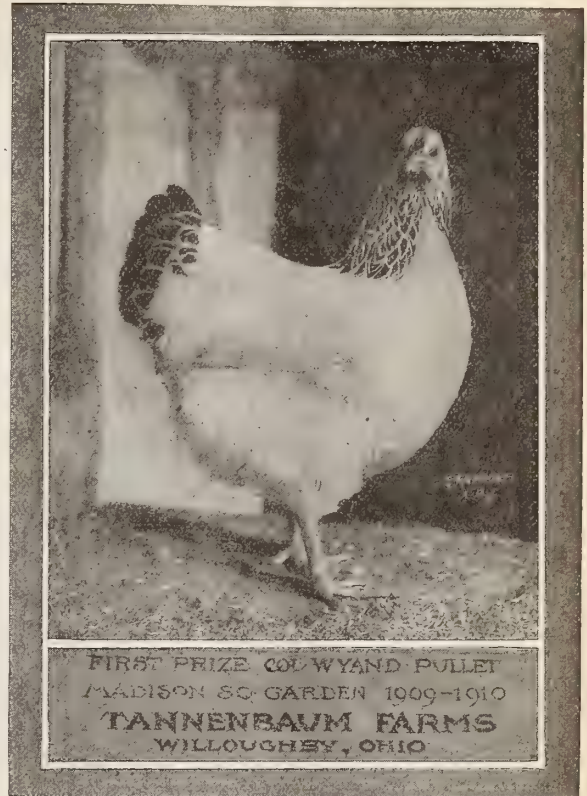

Following is an experiment which I conducted last season in order to find out more about the disease. On April 15th I had a hatch come off of 102 chicks (S. S. Hamburgs), which were placed in a brooder; brooder was in a house, No. 1, 16x30 feet, dirt floor. Chickens were fed for first week on hard-boiled eggs with grit, after first week eggs were discontinued and corn bread, wheat, cracked corn, and a small per cent of beef scraps formed their ration until three months old, with plenty of fresh water and grit. Of course, of these 990 were raised to maturity with no signs of any bowel trouble. I had another hatch come off April 20th of 107 chicks which were placed in same sized brooder as ones above mentioned. Brooder was placed in a house, No. 2, 12x20 feet with dirt floor, but had been used the season before in raising young stock in, were fed practically the same amount of the same kind of food. At about 10 days of age they began to show trouble and at the end of one month 13 of the 107 survived, and of these three were raised to maturity. On May 3d I

This convinced me. Later in the season I cleaned out house No. 2 and put in fresh dirt (clay) and overhauled things generally and had good luck with a July hatch.

The coming season I shall thoroughly clean up all brooder

placed in an incubator 127 eggs and on same date set five hens on 75 eggs. May 22d incubator had completed a hatch of 98 chicks, fine, strong fellows. May 23d the five hens proved to have hatched 61. Two of the hens were placed in the house No. 2, 12x20, where the mortality visited the former incubator chicks, with 32 chicks of their own hatch and 8 of the incubator chicks, while house No. 1, 30x16 feet, was given charge of the 29 remaining chicks hatched by the hens and 61 of the incubator chicks placed in same brooder as hatch of April 15. The remaining 29 incubator chicks were given to two hens which were placed in new coops away from where there had been any chickens of any kind for four years. Well, I had them pretty well mixed up, they were all fed on a prepared chick food and oat flakes with water and grit fed in proportion, so each flock would get same amount of food. Of the 40 placed in house No. 2, 12x20 feet, 5 reached maturity. The white diarrhoea came in due time and left the small remnant. House No. 1, with 90, came out at 12 weeks with 78 and the hens that were removed to new places raised 28. Would have raised all, but hawk took one.

houses and runs and see if the disease cannot be stamped out on my place. I cannot see any difference in the incubator hatched and the hen incubated chicks while growing or after

First White Wyandotte pullet at Youngstown, Ohio, 1910. Bred and owned by F. D. Sutton, Youngstown, Ohio.

maturity. Some think filth causes white diarrhoea, but I have seen chicks thrive in all sorts of coops and almost all sorts of feed.

H. H. Swit.

Sink Grove, W. Va.

POULTRY ON A CITY LOT

PROFIT as well as pleasure; care of incubators and brooding the chicks.

Poultry on a city lot may be a source of profit as well as pleasure. The idea that chickens will not thrive unless they have a large amount of ground to roam over is wrong, as there are hundreds of back yard poultrymen who have

First prize R. C. Rhode Island Red cockerel at Ft. Wayne, Ind., January, 1910. Bred and owned by Longfield Poultry Farm, Bluffton, Ind.

won, and are still winning the blue ribbon in our principal shows, and have heavy laying, and as healthy stock as that raised on a farm. No doubt there are lots of people who have made a failure in poultry on a city lot, the cause though is lack of care, filthy yards and houses. As the healthiest of poultry will not thrive in filthy, diseased breeding yards and houses.

Poultry to be profitable on a city lot should have a clean, dry house of sufficient size to accommodate the flock; one of a southern exposure is preferred, with a window that should be on hinges, and the upper half of the glass removed and replaced with muslin or burlap, so as to provide plenty of fresh air, as this is a very important factor in keeping poultry healthy. Then the roost should be made about three feet from the floor, and a dropping board about ten inches below the roost. It is best to make it so it can be removed for cleaning and airing. The nests can be put under the dropping board so as to be darkened, and should have fresh, clean straw every few weeks. This can be made out of orange boxes or soap boxes which can be obtained at any grocery.

Feeding is another important part.

Feed nothing but sound, clean grains, and fresh table scraps. A mixture of oats, cracked corn and wheat make a good morning feed with some green food at noon, and at night another feed of grain about twice a week. A mash composed of table scraps, clover, bran and beef scraps can take the place of a feeding of grain. Then there should be a plentiful supply of fresh, pure water, also grit, charcoal and oyster shell.

Keep your yards clean by scraping and sweeping them every week.

Next comes the most interesting part of the poultry business; the hatching of the chicks.

In saving eggs for hatching, whether for incubators or hens, care should be taken to select only eggs of even size without rings or spotted shells. They should be kept in a box or basket at a temperature of about 50 degrees. In setting a hen a quiet, darkened place is best. Give her a nice, roomy nest with plenty of straw, and have food and water before

her at all times. Thoroughly dust the hen two or three times during the hatching, and just before giving her the chicks, with a good grade of insect powder.

Now as to incubators. I believe that one of the greatest causes of poor hatches is due to the rough handling of eggs during incubation. Great care should be taken in turning and testing the eggs, as it does not take much jarring when the eggs are at a heat of 103 degrees to ruin them, and the continuous tampering with the regulator will cause a great variation of heat, and I have found this to be a great fault with a great many beginners. Regulate your machine before putting in the eggs and if the temperature goes too high turn the light down a little. Eggs should be as fresh as possible and clean. I would advise putting a piece of open mesh, cotton flannel or muslin in the bottom of the egg tray, scalding the cloth out every third or fourth day. At turning time this also helps supply moisture and the results will be a better hatch. Do not crowd the eggs in the tray but put in what it will hold comfortably. At hatching time it is best to darken the machine by hanging cloth over the glass door. Keep the machine closed and do not open it while the chicks are hatching unless it becomes crowded. When the chicks are all hatched they should be removed from the incubator to the brooder, which should have been heated to 95 degrees under the hover, where they should remain until about 48 hours after hatching. Then they will be hungry and steady on their legs.

Their first feed should be grit and charcoal, with a small amount of bread crumbs slightly moistened with milk. This should be given them for the first two days; then a good chick feed will take its place. When they are about a week old give them some sand and clover or chaff to scratch in. Learn them to exercise and scratch for their feed. After ten days some beef scraps should be given them. Care should be taken not to feed too much at first. Green food should be given after a week. Tender leaves of lettuce or lawn clippings are easily obtained and properly fill the bill. Give plenty of sunshine and fresh air, keep the brooder clean, give clean, pure water with the chill taken off.

Do not handle and pamper the chicks as this will make them tender. It is best to kill all runt or cripple chicks, as they are a menace to the others, as they will cause crowding, which will surely cause the death of a great many of the chicks.

Care should be taken not to over-heat or chill the chicks, and the temperature should be gradually reduced each week. After they are six to eight weeks old no heat is required in the spring months. They should have larger grain, plenty of

RED CHICKEN MITES

ONE of the worst external parasites of poultry, against which the poultryman and the farmer have to contend, is the common chicken mite. There are other species of mites which attack poultry, but do less damage. This blood-thirsty pest causes great loss to the poultry industry of this country by killing adult fowls and chicks as well as cutting down the egg supply.

Hens which are attacked by mites cease to lay, become poor in flesh, the feathers roughen and fall out. The head becomes pale and the bird presents a sickly appearance. These symptoms are caused by the irritation and loss of blood due to the nightly visits of these greedy parasites. It seems scarcely possible to believe that such small pests could kill full grown fowls, but they come in such large numbers that their total capacity for blood is enormous. Their ravages on the setting hen are most pernicious, they having access to the hen at all times, causing a very rapid loss of blood. Attacks upon the setting hens often result in the hen leaving her nest or in her death. In either case the hatch is spoiled. When a hen does withstand the attack of these mites, the newly hatched chicks are attacked as soon as they emerge from the shell and are often killed in a few days. The mite problem is the greatest the poultry raiser, who hatches with hens, has to contend.

Description and Habits.

The full grown mite is about one-twentieth of an inch long and is somewhat flattened in shape and can be plainly seen with the naked eye. After feeding they are somewhat reddish in color. They have six to eight legs, depending upon their age. Unlike the louse, the mite does not live on the bird at all times, except in extreme cases. It generally attacks the fowls when on the roosts or on the nests. Therefore, an examination of the birds will not always discover the pests. Their presence can be discovered generally by carefully examining the under part of the roosts or nests. It requires a very careful examination to discover mite patches when there are but few mites present, as they are hidden away from the light, but in cases where they have been allowed to multiply freely the patches increase in size and spread over the exposed surface of the walls, roosts and nests.

Remedies.

The best remedies for mites are cleanliness, sunlight and spraying with a good disinfecting solution. The poultry-house should be equipped with all movable furniture. The roosts, nests and every other appliance in the house should be made in such a way that it could be easily taken out and the house given a complete cleaning and disinfecting, reaching every crack and crevice. The solution most commonly used and as nearly effective as any is a three part kerosene and one part crude carbolic acid solution, or most any of the coal tar prepared solutions. Any of these solutions can be applied most effectively by a sprayer, as it penetrates every crevice better than when applied with a brush and unless you disinfect the place thoroughly you might as well make up your mind to abandon the chicken business and raise mites. Do not let once be all you do, but in several days after the first disinfecting go after it again, as there will be a new supply which has been hatched from the eggs that had been laid before your former cleaning. Your cleaning should be done every few days for quite a long while, as it is an endless task to exterminate these mites. In setting a hen, whether you have lice or mites or any other pests, it is well to clean the nest thoroughly and in the crevices of the box pour a small amount of crude carbolic acid; then fix the nest as you usually do and the last thing before putting the hen in, dust her well with some reliable insect or lice powder. Have for your motto, "Watchfulness, cleanliness and plenty of sunshine."

Chambersburg, Pa.

E. H. Keefer.

BROODING THE CHICKS

THIS article is not intended to help the large poultry raisers who have hot water systems in their brooder houses, but is intended to help the small fry who raise their chicks in individual brooders.

The outdoor brooder never appealed to me very strong for raising early chicks, because during stormy weather the chicks must be kept penned up, which goes against their health and development. My ideal is a small colony house 4x8 feet, which will hold an indoor brooder, for 100 chickens. In case of stormy weather the chicks have the run of the house, and scratch in the litter for their food and exercise. The brooder

is divided, having fifty in a flock. When the brooder is no longer necessary for the chicks it is removed, and the chicks have the house until removed to winter quarters.

More chicks die from being confined too close in the brooder than any other cause. Have a warm hover, but have a cool exercising room where the chicks can get around and scratch. Get the chicks on the ground when three days old, or before; there is something about being on the soil that invigorates them.

The feeding question is an unsettled one, but I size up the different methods this way: It matters not what you feed, if the brooders are kept at the right temperature, the chicks have exercise, grit, and are not overfed. We have fed with good results, bread soaked in milk and squeezed dry, cracker crumbs, rolled oats, steel cut oats, and commercial chick feed, but the other conditions must be right or no feed will save the chicks.

If the outside temperature will permit, lower the brooder temperature a degree a day, harden the chicks to the cold, rather than to pamper them with too much heat. Do not feed newly hatched chicks for 48 hours, but keep them warm and give them fresh, pure air to breathe. Select a brooder that is close to nature. The chick's body is under the hen, but its head is out in the pure air. This is the plan your brooder should be built on, a warm hover but fresh air to breathe. You cannot expect to raise strong, healthy chicks if they are compelled to breathe hot, lamp-fumed air! it would soon weaken an adult person, let alone a newly hatched chicken. Look well before you purchase a brooder and do not buy a poor one to save a few dollars. A good brooder will last for years and is a profitable investment. Many chicks are lost each year because people try to economize on brooders. Manufacturers are to blame for this, as they over-rate their brooders. Chicks will grow faster if in small flocks. We never put over fifty in a bunch. A brooder that will be large enough for 100 newly hatched chicks will be crowded in two weeks. Here is where the loss comes on many brooding systems. The weak chicks go to the heater first; later the strong ones come and pack the weak ones close to the heater, where they stay all night. In the morning there are a few dead ones to throw out. A few nights like this, and our flock is diminished considerable; with a big chunk of profit gone in the same direction.

Overfeeding is another bane which takes many chicks in their early childhood. Because a chick will stand and eat all it can hold is no reason why they should be fed that way.

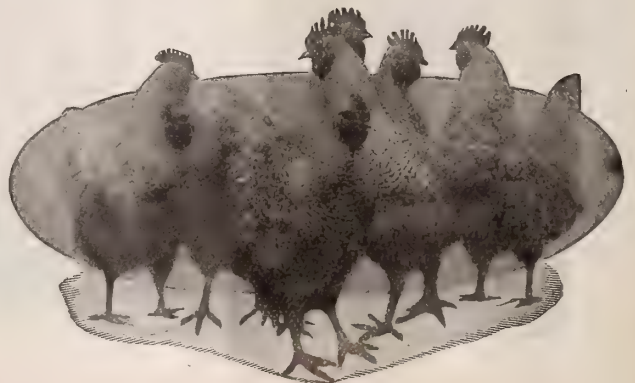

Make the chicks scratch for their food by scattering it in chaff; feed a little at a time and at least four times a day for first week. Have regular hours for feeding, so the chicks will not expect food every time you approach them.

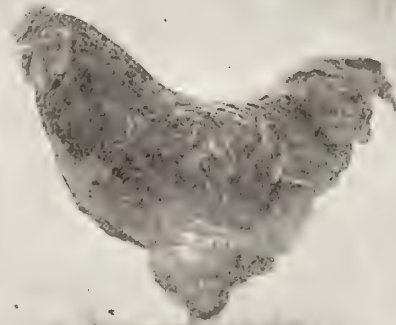

Some form of green food should be supplied. Lettuce is probably the best early feed. Get the chicks on grass as soon as the weather will permit. This is nature's green food.

To keep our chicks healthy we must clean out the brooders at least twice a week, clean out chaff and all and replace with new. Hoppers containing charcoal and chick grit are kept in the colony houses from the start. It is surprising how much of these they will consume, and are necessary to the best development of the chicks. After the first week commence to feed animal food of some sort. To prove to your own satisfaction that it pays to feed it, feed to one flock and give another flock the same rations minus the animal food, and in three weeks you will be surprised at the difference. If we would raise the biggest per cent of the chicks we hatch, we must have the right kind of brooders. Keep the temperature right, make the chicks exercise, do not overfeed and keep the brooders clean.

OUR GUARANTEE.

We guarantee our subscribers against loss of any fraudulent misrepresentation in any advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

Our June Issue

Owing to the increased interest being taken in the Rhode Island Reds and the numerous requests on us from our subscribers for more detailed information about this variety, we are going to devote a considerable amount of space in our next issue to the Rhode Island Reds, and will give some very interesting reading matter from the pens of foremost breeders of this variety in this country. All of which, we trust, will be of great benefit, both to the variety and to our readers.

Delegates From Branch Associations

We have said it a thousand times, and say it again. The A. P. A. is going to get itself down on a delegate basis some of these fine days, and then each state will be a branch and pay its delegates' expenses in attending the annual meeting as well as caring for all the matters which come up in its section. Robinson rings the bell another shot in what he says about the annual meeting and the general representativeness of it. This in the April Farm Poultry. Read it:

A man pays \$10 for life membership in the association. This gives him for life all privileges of membership in the association without further expense—except the expense incidental to availing himself of the privileges of membership. The only privilege of membership he can exercise without considerable expense is the privilege of voting for general officers by mail ballot. That and the privilege of taking part in meetings are all the privileges pertaining to membership—except, of course, the possible privilege of holding office.

The average expenses of those who attend meetings of the association cannot be much less than \$25 per meeting, even with a majority of those in attendance coming from places near the place of meeting. Probably very few members ever attend a meeting of the association when the cost of attending such meeting

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

does not exceed the amount of the life membership fee. Those who come from a distance pay much more for the privilege. Kansas and Oklahoma members attending the meetings at Niagara must have spent \$75 to \$100 each for their privilege. That's about what it will cost the New England members who go to St. Louis.

Very few members, as individuals, can afford to pay for the privilege of taking part in meetings of the association, particularly if to the expense must be added loss of time or salary. That is how and why it happens that so large a proportion of those attending the meetings are representatives of the press and—in general—people who have some special business at the meeting for which their expenses are paid, or on account of which they feel justified in paying the expense out of their own pockets. Will anyone maintain that this is a healthy condition of affairs?

What the association needs most at this time is to make membership of more value to the individual member. If it cannot do so under the constitution as it stands, the constitution should be made to conform with the need.

The association should not only undertake more for its members, but it should be so constituted that members will have greater privileges within the association. The only practicable way of bringing this about is by developing the branch organizations. The branches have to be something more than mere recruiting stations for the general association. It is in the branch that the individual member must exercise most of his privileges, and through it that he must get most if not all of the direct benefits of membership in the association.

Keep Plugging

It requires that any man or woman who enters the poultry business be more or less of a plugger. That quality of staying by a thing till it is a success is the one dominant note in the personality of the successful poultry breeder. If

things do not come your way at the first throw of the tricks that you may have up your sleeve, an eternal sticking to the game will bring them. Perhaps it is the egg trade that you are fixed to care for but which it seems does not come. It may be that you do not make headway in getting out the number of chicks which you will need for the trade the coming fall. Nothing but a constant keeping at the hatching end of the work will bring you returns. Early hatches may not be all that you would like and if this is so you cannot do better than to prolong the hatching season a few weeks and push the chicks harder than ever when they are at the forcing stage.

In the case of working for trade which does not materialize one must use his gray matter and look about for the weak points in his attack. The business is to be had if we get in after it right. One of the cardinal points that gets business, if followed, is the right kind of follow-up matter. We do not know of a thing in the whole scheme of getting business among American fanciers and breeders that needs more attention than the matter we use in keeping after the inquiry once that it asks for prices and lets us know that it is in the market.

Good printed matter does more to get orders than all else. We know this because we have seen so many breeders make a success of the business who were very particular about what they sent out in this line. Whether we get our share of the trade or not all depends upon the efforts that we put into going out after it. Not long since we learned of a breeder who thought that because he once made a fizzle of hatching with an incubator he could never make such a task succeed. He built up a nice trade. He could have more business, but by hen-power he could not rear the number of chicks to meet it. He was turning away business because he had no stock to offer. But during the night, as he wondered how to care for the trade he was losing, he determined to try it again and make a success of it if there was that much stick-to-it in his mental equipment. He

installed two incubators and began to learn the art of incubation all over again and tried his skill with cheaper grades of eggs till he had some confidence in himself. Today he is making a go of it and getting the trade that once was getting away. He prefers incubators to hens now and is doing well with both. What he thought was a great deal of work and worry has come to be nothing more than a part of the daily routine. Coupling some common hen-sense to the incubators, which were standard in make, and needed but a few brains to operate them, he is making a nice thing out of what he once thought he could never succeed at.

Science Hard Hit

The following we take from "Gleanings in Bee Culture." It is a rich item and we appreciate it owing to the fact that we were somewhat taken in with the instrument when it came out in England some time ago and told successfully the sex of the animals or eggs placed under it:

At the recent poultry show at Madison Square Garden, New York City, among the novelties there was a "sure thing" egg tester, the invention of W. Gunnerson, of No. 20 Garden street, New Rochelle, N. Y. The inventor claimed that his device would not only tell an unfertile egg from a fertile one, but would also determine the sex. The device was a small pendulum which was held over the egg to be tested. If it swung around in a circle it indicated a cockerel; if back and forth in a straight line, a pullet; and if it remained stationary, an unfertile egg. I devised a plan to test the machine; and, accompanied by Frank Rodgers, of Farm and Poultry Magazine, brought an egg for Mr. G. to test. The device was placed over the egg and commenced to whirl around in a circle. Mr. G. pronounced it a very fertile egg, and, if placed in an

incubator for twenty-one days, it would hatch out a cockerel, and he would bet \$100 on it. I then took the egg, and, in the presence of about fifty people, broke the shell and stated that it was a hard-boiled egg, and showed it to the spectators. Mr. G. said he did not care—there was life in it, anyway. The joke of the boiled egg spread all over the Garden, and next morning Mr. G. was kept busy testing eggs which, on breaking, all proved to be boiled, and the management then took a hand in the game and ousted Mr. Gunnerson from the Garden.

Do It Yourself

We all acknowledge that the fancy is growing here in America. That this is true in fact, we have but to point out that while adherents of other breeds do not dwindle, the newer ones still gain ground. For instance look at the Partridge Plymouth Rocks. They are growing in popularity daily and in the near future we shall see some very fine classes at the shows. They are meritorious birds and will appeal to many who like a good looking bird, with a richness of color that still attaches to the name Plymouth Rock. We saw something in print a while back about the Partridge forcing ahead of their sisters, the Silver Penciled variety, and those who are on the firing line know that what the Silvers need is a Noftzger behind them. The future of the Partridge Rocks will be largely built on the excellent foundation that Mr. Noftzger has provided for them.

We must have more varieties in the American fancy if we are to keep up the interest of the fancy. We see the Cuckoo Orpingtons and Wyandottes of the same color coming. They are going forward abroad and will go ahead here if they have the right men behind them. It makes no difference what sort of a breed you might pick upon to develop and push, if you went at it like a Keller-

strass or a Noftzger or a Bright or any of the hundred and more well known men who have made money in the business as well as having put some money and a lot of brains in it, you would do as well. There is no doubt about it. In the poultry game the opportunities are lying about thick and deep. They abound in all sections. Carry the message and you will find it worth the while.

The Timely Kicker

'Twas Shakespeare, dear Shakespeare, who said that we would ever have the kicker with us. He knew that kickers even existed in his day for did they not kick on his plays and has it not remained for the play-goers of today to appreciate him thoroughly? Perhaps he used to listen to some of the gossip of the kickers who foregathered at the ale houses and the coffee tables in the quaint little "pubs." of long ago while they were reviling John Doe and Richard Roe for sending them quitters or else eggs from dunghills. It has been said that this Shakespeare wrote on every topic under the sun. We have not as yet come upon anything he wrote about the ancient methods of satisfying kickers who have bought fowls and eggs.

There are so many brands of kickers and they come in such assortments that we would not dare classify them or even attempt it. The one most in evidence right now is the fellow who placed his order late and expects the poultryman or breeder to ship his eggs for hatching the same day that the order was received. This is the season of big business. It has come and the breeders are all busy filling orders and currying favors with the hens so they will shell out more eggs. Let us all be patient till we have been served. If you have to wait a couple or three weeks to get the eggs you have ordered, then thank goodness that you have at last received them. Put

YOUNG'S STRAIN S. C. WHITE LEGHORNS

I HAVE NO OTHER BREEDS

Another great victory at Madison Square Garden, New York

Again winning for the eleventh time more prizes than all of my competitors combined

After having 119 of my best young birds stolen, my winnings were as follows: Cocks—1st, 2nd, 4th, 5th. Hens—1st, 5th. Cockerels—1st, 2nd, 3rd, 4th, 6th. Pullets—4th. Pen—2nd. Special for best display, special for best male, special for best color male, special for best shaped male, special for best female, special for best head female, special for best shaped female. Spratt's Gold Special for best Leghorn cockerel, any variety, hatched 1909. State Cup for best display. Elm Trophy for best male. Silver Medal for best male. Bronze Medal for best female.

You cannot win without my strain. It is the greatest laying strain on earth. Why fool away your money purchasing eggs and stock elsewhere, when you can buy from a strain that has been line bred, trap nested and established for 35 years, for the same money or less?

The following are the male birds that are heading my thirty yards this year:

the hen on them and then watch that hen. Do your part to get all the good from those eggs that is in them.

Crevecoeurs Wanted

Wm. McDaniel, 315 N. Lehigh avenue, Sayre, Pa., is in the market for some first-class Crevecoeurs. Those who have this variety for sale should write him and mention American Poultry Journal.

Notes of the Month

Higgs—One thing is sure, Jiggsy—that man Hicks is either going to tame the lions or else—

Jiggs—Get his anatomy fearfully mauled when he gets into the cage of beasts at St. Louis.

Sam Nofztger writes us that a pen of his Partridge Rocks are in an egg-laying contest somewhere in New York and are leading a field of picked colts, to use a horseman's expression. Sam says that if they have the luck to win it will be the first good luck that has happened to him in a coon's age. Here's hoping!

The line-up behind Quisenberry is mighty strong out in the entire chicken country. It looks like Tom for the board this time.

A number of years ago the wishbone of a chicken was hung over the front door because the first man to enter under it was the man whom daughter was going to marry. Nowadays we hang the wishbone over the door to show the good people that we can afford chicken.

There was some talk of a Poultry Train being sent through the state of Iowa to disseminate a little more poultry lore among the farmers and their wives and others who were so situated that they could keep chickens. Whether the chicken train materialized is more than we can tell, as we saw no more about the idea in the Iowa papers. It would be a good thing for the state poultry interests.

They also say that the German poultry fanciers are trying to get up a line of their breeds to bring over to the next Missouri state show. We welcome them with open arms. The more the merrier. Nothing would be more educational than a complete array of birds of all breeds as they are bred in Germany.

You can plan to get your outing down at St. Louis this summer. Why not? It is now a cinch that the A. P. A. will meet there and we are to have all the free entertainment that the burg on the Rhine can scare up.

Line Orr is still holding off and says he will go to St. Louis, nit, if this town gets it. I have seen the time when Line had a great lot of fun in San Louey.

If Milo Hastings is not getting his in the journals for April we do not know how one could get advertising for nothing. Robinson says he is a crafty lad.

Robinson suggests that the nightmare that keeps Curtis awake nights is that there is a conspiracy in the west to dethrone Crawford and Curtis and beat Fishel, as well as put the association in the hands of Hewes, Hicks and Richards. Well! Not while the west is on the job.

Purvis had to tell his readers that he was on the job with Poultry, for from his late obituary notice in R. P. J. the impression got out that he was about to seek other fields and pastures new. Nothing to it.

"We, the undersigned," who resigned from the Black Wyandotte Club, created a ripple which reached from the Atlantic to the Paphysic, perhaps.

The Stockkeeper asks and answers itself with a good one: If a pretty pouteress marries a pillmonger, why may she be said to make a bad bargain? Because she lets him have a "duck" and gets but a quack in return.

The Reds are certainly traveling in England. They are going so fast that the English, too, have had club troubles. Nothing like advertising a breed to make it a goer.

It looks to the man who reads Trafford's "One Way of Doing Business" that he is afraid to name the flagrant person he assumes to attack.

Texas now boasts a branch of the A. P. A. and J. G. McReynolds has been selected as president. What do you know about that?

A REMARKABLE RECORD.

W. Etzensperger, Willoughby, Ohio, breeder of Single and Rose Comb Rhode Island Reds, at the late Cleveland show won seven first prizes, which is more firsts on Reds than was ever won by one party at this show. His S. C. Red cockerel was such an extra good specimen that Lester Tompkins, who gave him first at Youngstown, together with the other judges, picked him out for the A. P. A. gold medal special for best cockerel in the show. He was also awarded the A. P. A. silver medal for the best cockerel in all classes, including English, American, Asiatic, etc., an honor that is considered the greatest a breeder can receive. He has refused \$100 for this bird.

Mr. Etzensperger also breeds S. C. White Orpingtons and won first on cockerel at Cleveland in competition with some of the most noted birds in the country. Our representative handled a number of his birds, and says that the quality is superb. He has a few choice cockerels yet to spare in both varieties. Write him and mention American Poultry Journal.

NOTICE.

Just as we are going to press we receive a letter from the White Feather Poultry Farm, Rocky River, Ohio, in which they inform us that they have decided to reduce the price on their S. C. White Leghorn eggs to one-half. This will be welcome news to many of our subscribers, who desire to secure some of the noted "Snow Fluff" strain of S. C. White Leghorns, as they can now secure eggs from their best pens at \$2.50 per 15. These people guarantee satisfaction and are in a position to back up this guarantee to the limit. Write them at once and mention American Poultry Journal.

Read the address on your American Poultry Journal carefully. If it is not absolutely correct please write the publishers at once, as it may cause delay in delivery at a future date.

PITTSFIELD

FIRST PRIZE COCK BOSTON SHOW 1910,
PITTSFIELD POULTRY FARM, PITTSFIELD ME.

First Boston Cock

Can furnish you hatching eggs, day-old chicks and breeding birds from their winter laying, profit paying Barred Plymouth Rocks that have made their plant successful and famous; the kind of stock that is adapted to farmers, egg farms or broiler plants; that is really bred to lay and matures rapidly. Or we can furnish you the quality of stock that won for us

At Boston, 1910, 1st Cock, 1st Exhibition Pen Chicks, 2d Hen and Eight Other Regular and Special Prizes

This winning was made against the biggest and best known breeders in this country and proves conclusively that we have the **leading exhibition and utility strain of America.**

Our exhibition matings contain all of our Boston and other winners this season. They are correctly mated for best results and will produce winners for you at any show next season. We will sell eggs at our established price from all pens of \$4 per 13, \$12 per 50, \$24 per 100, or at special prices for all eggs from one pen. Results guaranteed. We will mail a detailed list of matings on request.

While we are justly pleased with our record with fancy birds, we take special pride in our reputation as successful breeders of a **healthy, vigorous, money-making utility strain**, such as nine out of ten of you want. The object of this plant is to supply eggs and stock for breeding purposes, and all of our efforts are in that direction.

Every bird in our breeding pens is a carefully selected, healthy, vigorous, range-reared individual, selected for type and possibilities. Eggs or chicks from this stock are sure to give you permanently satisfactory results.

No Barred Rock plant in the country is so well equipped to handle large orders for chicks or eggs promptly, and none takes more pains with small orders. We guarantee safe delivery anywhere, and good hatches.

Price of Utility Eggs: \$1.50 per 13; \$4.50 Per 50; \$7 per 100

Day-Old Chicks: \$6 per 25; \$10 per 50; \$15 per 100

Your satisfaction is the key to our success, and we guarantee it

We have a choice lot of breeding males and females on which to quote you prices if interested. **Do not lose sight of the fact that Barred Rocks are the greatest of all American birds and best adapted to American conditions.** Illustrated catalog mailed free on request. It is worth reading.

LETTERS from our SUBSCRIBERS

Editor American Poultry Journal:

Dear Sir:—I am a boy twelve years old and take great interest in poultry. I find in keeping poultry they need attention; if this is neglected the owner suffers loss. Pip is a great annoyance to all poultry men. The bird appears dull and does not eat; the comb is bluish. You will find a white shell on the tongue. Draw the tongue out of the mouth upward toward the side and close the beak gently. Take a pen

Editor American Poultry Journal:

Dear Sir:—In reply to, "What's your experience," in the April issue, would say that I built last fall a house 10x36 feet, rear 5 feet, front 7 feet. It was simply square edge hard pine boards nailed to 2x4's at top and bottom. The rafters were 2x4's set at 2 feet on centers. The whole was covered with Amatite Roofing. It faces a little to the east of south. The interior I have arranged so that I can throw it

in which all whole grain was fed both morning and evening, supplemented with Park & Pollard's dry-mash. At noon sprouted oats or other green feed was fed.

Use Potter's roosts and nest outfits.

The muslin curtains were always open when it was not storming or the wind blowing too hard from the south, if the thermometer was above zero.

Just before zero weather set in last winter the roosts were covered with large dry goods boxes which were made tight except in front, which was open, over which I kept burlap curtains when the weather was at zero or lower.

All winter there was not the first sign of a cold or a frosted comb among the fowls.

In the east end of the house we kept a few S. C. W. Leghorns, which went through as nicely as the Orps. There was no male bird with the Leghorns, but the cock with the Orps had the same treatment as the pullets.

Since the pullets (both breeds) commenced laying last fall they have given us a 40 per cent or better egg yield all

First prize White P. Rock pullet, Detroit, 1909. Bred and owned by Lyman H. Hill, Jackson, Mich.

This beautiful Black Orpington cock is without doubt one of the best that has ever been shown in the West. He fairly sparkled with lustrous green sheen and his owners are to be congratulated on having such a fine male for their breeding pen.—L. Stahmer.

knife and loosen the shell at the end and it will come off. This is the pip. Dip it in lard and pepper and give it to the fowl. The next day the bird is as well as ever. I think flower of sulphur a very useful article, when sprinkled around setting hens, and their feathers dusted with it will keep off lice. After cleaning the poultry house make a small fire in the middle, cover the fire with sulphur, then smoke will arise. Close all doors and windows for about fifteen minutes, then open them. It is a great purifier and kills all germs and lice. If a poultryman reads the American Poultry Journal he will find very many useful hints.

Baltimore, Md.

Louis Strott.

all into one pen or six, making each 6x9.

The building is set on a concrete wall 6 inches thick and 1 foot high. In the west end I have a door 2½x5 feet. In front of each pen I left an opening 3x5 feet (1 foot from sill and plate), over which was placed 1 inch mesh wire (should have used ¾ inch, as sparrows can crowd through the inch mesh). Two-thirds of each opening was covered with a storm sash and the remaining third was covered with unbleached muslin curtains.

The soil is of a gravel nature and the interior of house was raised about 6 inches by filling, on which the litter was placed from 6 to 12 inches deep,

through the winter and at present it is about 80 per cent. How long they will keep it up I cannot tell.

The house is protected a little from the north wind (we have no east wind), but it catches the south and west full force.

It is perhaps not necessary to state that the hens never lack grit or water (chill taken off).

Our weather often goes to 20 below, which it did once or twice during the winter. Seven years ago it went to 38 below for two nights. Hoping that this may help someone, if published, I am,

yours respectfully, A. M. Becker.

Editor American Poultry Journal:

Dear Sir:—I read so very many interesting articles of the different breeds of fowls, that I wish to mention the merits of the Seilian Buttercups. For the production of eggs there is no other breed of chickens that approaches them. The Leghorns, Hamburgs, Wyandottes, even the R. I. Reds, are not in it. They are left in the distance. Buttercups are non-setters, and lay practically all the time, even when moulting. They lay large, pure white, pretty eggs and are very beautiful chickens. They are very tame and friendly, active and great foragers. They also require less food than other fowls. If given free range they require very little food, except in winter. Another thing in their favor, they are extremely vigorous and hardy. I have never had one case of roup. If any one is looking for eggs, Buttercups are the fowls.

Easton, Md. Mrs. J. S. Demaresq.

Editor American Poultry Journal:

Dear Sir:—Fire today destroyed a portion of our brooder house, caused by an explosion of oil heater, destroying over 200 January and February hatched chicks, every chick we had, and all from our best matings; chicks to value of \$300 burned to death. Strong southwest gale blowing, and only the help of neighboring farmers, forming bucket brigade, stopped the flames and kept them from destroying the entire brooder house and getting to the breeding houses.

We have, however, several large machines due within a few days, of exhibition stock, and although this is a serious set-back, it will not keep us from furnishing stock for the season's fall trade.

Huber Bros.

Kenosha, Wis.

Editor American Poultry Journal:

Dear Sir:—On reading your paper I see you want to know of muslin fronted houses in this country. In reply will say:

I am not a big breeder, but think that there is no other business than the chicken business.

Four years ago I built a hen house 12x32 and 12 feet high. I have an upstairs in it for litter store room and other supplies. I did not put in muslin curtains the first two years and my chickens all got sick during the first two winters and I lost about half of my flock. So on the third winter I put in two muslin curtains and my chickens were all healthy. I have two curtains on the south side 2x4 feet and my building is double boarded, plastered and cement floors. Previous years my walls were always sweating in cold weather and my chickens all contracted a cold, but since I put in curtains my walls never sweat and my chickens were always ready for their feed. I have had Aneonas in this building and have not even had a frosted comb, and had plenty of winter eggs.

A Reader.

GALVESTON, TEXAS.

"What may be well considered as a decided departure from the ordinary run of things," says Mr. Frank James, "is the Poultry and Pigeon Show that is to be one of the features of the second annual Cotton Carnival at Galveston, which important event takes place this year from July 30 to August 15, inclusive.

"It has always been a mystery to most

people why shows could not be held at this time of the year. Of course, the argument will always be advanced that the weather is so hot, but Galveston with her position on the Gulf of Mexico, right in line with the sea breezes that constantly blow during the summer months, is in a class by herself when it comes to genuine cool weather, and all the more will it be so in this instance, when you consider that buildings and coops are to be built that will have special reference to this feature.

"Galveston's hotels and boarding places are always full of visitors at this season who are away from home for rest, comfort and recreation, so there is every

reason to believe that 'My Lord Rooster and My Lady Hen' will also look upon it as a decided change for the better in their usual surroundings.

"When these facts are more generally known it is hoped by the management that many of our leading progressive fanciers will at once make every effort to get up their usual fine exhibits. It is also intended to hang up a series of cash prizes that will make it quite an object to the exhibitors, and there will be a series of cups presented that will be of as fine a character as any ever yet offered in a show of this kind. A strong committee of arrangements has been formed, who will have in hand the placing of coops,

Hall Mammoth Incubators Are Known by the Chicks They Hatch

The Hall Mammoth Incubator has worked its own way into public favor. It was a **success from the start** because it supplied in a thoroughly satisfactory way the growing need for a machine that would enable the poultryman's business to **expand automatically**,—without the repeated installation of new incubators.

The Hall Mammoth Incubator is **substantially built**. It is **easily and economically operated**. Its **plan of incubation is absolutely correct**.

Anthracite coal is the fuel used. There is **no danger** of explosion of lamps and **injury** to the eggs and chicks from **poisonous fumes**.

THE HALL BROODER SYSTEM

Half of the Hall reputation is based on the Hall Brooder System.

There are many advantages possessed by the Hall Equipments, and the net result is: **Larger hatches and heavier, stronger chicks that live**, with the cost of production and rearing reduced to a minimum.

Write for our free catalogue. We would like to get personally in touch with you and tell you more about The Hall Mammoth Incubator, Hall Brooder System, and Hall Self-Regulating Furnaces.

The Hall Mammoth Incubator Co.
UTICA, NEW YORK

etc., and the policing and management of the exhibits. This committee has been chosen from those who have the most knowledge and experience in the matter, and it goes without saying that every one that uses the advantages offered will have reason to be pleased therewith.

"Mr. J. V. Keeler, of Winamac, Ind., who has been so long and favorably known by our breeders, has been chosen

their fowls, and it is hoped that this feature will add to the general interest. All inquiries will have prompt and careful attention, and you are urged to avail yourselves of the opportunity."

NEW BERLIN, N. Y.

The Unadilla Valley Poultry and Pet Stock Association of New Berlin, N. Y.,

The officers were elected as follows: President, F. R. Pardee, New Berlin, N. Y.; vice-president, J. D. Grover, New Berlin, N. Y.; secretary-treasurer, R. F. Talbot, New Berlin, N. Y. Show dates are January 23-27, 1911; judge, J. D. Jaquins. It is now conceded that the New Berlin show is one of the leaders of New York state.

BELLOWS FALLS, VT.

The Connecticut Valley Poultry Association was recently organized with twenty-two enthusiastic members.

Officers: President, Rev. A. C. Wilson; vice-president, G. D. Clark; treasurer, W. G. Freeman; secretary, A. T. Pierce.

Intend to have first show in December or January. Score cards to be used. Will offer cash and other prizes.

We offer \$5 in gold for the best essay, not to exceed 300 words, "Why Should People Outside of Fancier's Join Poultry Association?" Must be in hands of secretary June 1.

In view of the fact that Bellows Falls is one of the best railroad centers in New England and the association backed up by live poultry fans, it should be a success.

We extend a cordial invitation to all interested in poultry to join us. Membership fee \$1.

TRI-STATE ASSOCIATION, MEMPHIS, TENN.

We have just received a copy of the directory of the Tri-State Poultry Association of Memphis, Tenn. It is very tastily gotten up and shows that the Memphis boys are hustlers, and that the Tri-State Poultry Association is one of the largest and strongest organizations in the country.

They had a show last fall that was a record-breaker, and everybody is hustling for a much larger and better show this fall, which will be held during the Tri-State Fair, September 27 to October 4, 1910.

Write C. L. Baker, secretary, 292 Madison avenue, Memphis, Tenn., for information regarding show.

CRESTON, IOWA.

At the annual meeting of the Hawkeye Poultry Association W. H. Sprowl was elected president; J. M. Scurr, secretary. Twelve silver cups were provided to be awarded at the next show to be held the second week of January, 1911.

A. B. Shaner has been secured as judge. Liberal cash and merchandise specials will be provided in addition to the regular percentage premiums, and every

from amongst a crowd of equally well known poultrymen to act as judge of the poultry. The judging will be done in the first few days of the carnival, and it is intended to allow exhibitors to withdraw their birds at the expiration of that time, provided they replace them with others. Certain specified days will be allowed for exhibitors to sell or exchange

held their annual meeting Feb. 28, 1910, for the purpose of incorporating the association and electing the officers of the year.

The following directors were elected: A. W. Morse, C. D. Burch, R. F. Talbot, F. H. Pardee, David Pugh, C. H. Sponable, Wm. Bell, W. E. Decker, F. W. Shaw, all of New Berlin, N. Y.

ORPINGTONS

BUFFS, BLACKS and WHITES

My elaborate 30-page, 8x10 catalogue is complete and will be mailed for a dime. It tells the story of the famous Byers Strain Orpingtons. The best colored birds each season are hatched late. My regular prices on eggs run \$5, \$10, \$15 and \$20 per 15. After May 15 I will sell eggs at half price. The quality of my matings is superior and the same in Buffs, Blacks and Whites. READ THIS AGAIN.

C. S. Byers : Orpington Specialist : Hazelrigg, Indiana

You are familiar with my phenomenal records for the past twelve years in Orpingtons if you have watched the advancement of this wonderful breed. I won more premiums on Orpingtons at 1908 and 1909 Chicago shows than any other exhibitor. I have supplied winners for the largest shows in the United States and Canada in the past and will continue to do so in the future. There's a reason.

Anyone can write catchy advertisements to catch the unwary for pecuniary gain only but I have been and am in the business to stay and YOUR BEST INTERESTS WILL BE SERVED.

I have the quality of the hour in line bred birds that can be depended on. That means all in the establishment of a reliable flock.

It tells the story of the famous Byers Strain Orpingtons. The best colored birds each season are hatched late. My regular prices on eggs run \$5, \$10, \$15 and \$20 per 15. After May 15 I will sell eggs at half price. The quality of my matings is superior and the same in Buffs, Blacks and Whites. READ THIS AGAIN.

effort will be made to make this the biggest show ever held by the association.

J. M. Scurr, Secretary.

EVANS CITY, PA.

The Evans City Poultry and Pet Stock Association will hold their "Fourth Annual Show" January 10-14, 1911, in Firemen's Hall, Evans City, Pa. This hall is one of the best in this part of the state and the association intends to make this show the best in the county.

This association has already made a reputation for its honest and square dealing, and the officers recently elected intend to keep this association in the front rank.

J. F. McFarland,
Secretary.

WOONSOCKET, R. I.

The sixth annual exhibition of the Woonsocket Poultry Association will be held in Harris Hall, which is one of the best lighted halls in New England, the same week as usual, Dec. 15, 16, 17, 1910.

Single cooping, good judges, large regular premiums, and a big list of cash specials, together with the good management that has characterized the show in the past, we expect will make it more successful than ever next December.

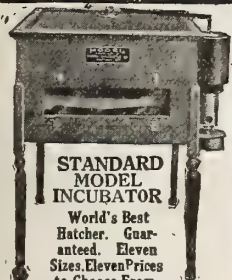

C. O. Smith, Secretary.

White Plymouth Rocks and Rose Comb White Leghorns are the two varieties bred by E. H. Reichert, Virden, Ill., and he is prepared to supply eggs of either variety that will hatch good, strong, healthy chicks, and will guarantee satisfaction. Write him now and mention American Poultry Journal.

SUPERIOR C.

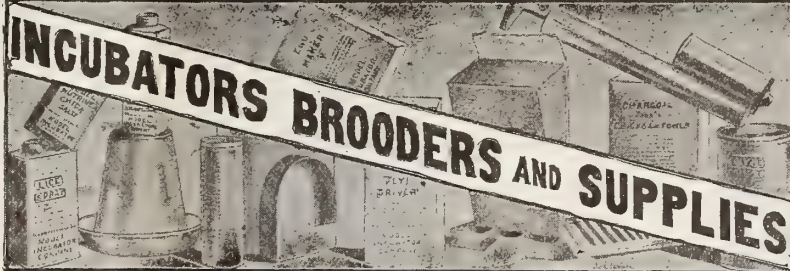

Second prize White Wyandotte cockerel at Kansas City, 1910, his first and only show. One of the best ever hatched. Bred and owned by George H. Rudy, Mattoon, Ill.

TALES OF SUCCESS in the Poultry Business are generally the outcome of good judgment in buying one's supplies and selling one's products. You will always find that the successful man uses care in choosing his incubators. He selects machines that he knows will hatch many and strong chicks. He buys brooders that can be depended on to keep an even temperature. He knows that it is not only the first outlay that counts, for when one buys cheap goods very often

a whole season's labor and time is lost. You have heard the saying "Take care of the pennies and the dollars will take care of themselves." In no business is that so true as in poultry-keeping. It's the little things that tell in the end. Lice must be fought before they get ahead, and the best Lice Dust is none too good. House-mites must be exterminated with a good strong Lice-Spray. Disinfectant that disinfects—in fact your whole equipment should be thoroughly depend-

able and of superior quality, if you intend to succeed. Let your Food Holders and Wall Founts be of heavy galvanized iron, especially when they cost no more than the low-grade kind.

"MODEL" INCUBATORS, BROODERS and POULTRY SUPPLIES, are unequalled in quality. They are for sale by dealers, hardware stores, seed and implement merchants, and feed stores all over the country. Ask for them, and don't be satisfied with any other kind. Write us.

IF YOUR STOREKEEPER DOES NOT KEEP MODEL SUPPLIES

BUY DIRECT FROM OUR FACTORY AND LABORATORY

It is most important that you should have Incubators and Brooders of Quality. The "Models" hatch more chicks and stronger than any other. They are Used and Recommended by Large Practical Poultry Farms, Government Experiment Stations

and Duck Growers; also with great success by Beginners in Poultry Keeping. Save your chicks from sickness and diarrhoea by using Model Nutrine Chick Salts. Dust them with our Lice Spray. Disinfectant that disinfects—in fact your whole equipment should be thoroughly depend-

This all helps you on the road to success. All our goods are guaranteed. Send them back if not satisfactory. When in Buffalo call and see our Factory and Laboratory. We want Poultry Keepers to be our agents. Write for terms.

CHICK CHATS

by H. P. Schwab

This department is open to all readers and advertisers in the eastern territory and all are invited to send in all poultry news items that come to their attention. Address H. P. Schwab, eastern representative, Irondequoit, N. Y.

On the road, visiting poultryman.

April, May and June are the best hatching months.

For the early shows April and May are best. But for the January and February shows the latter part of May and early June give best results.

When hatched keep them growing all the time; don't let them stand still

Easton, Pa., has also a pen of bull dogs. We met them but did not write them up. They surely were considerable in this case.

Did you notice the two grand Barred Rock males in last issue? Grove Hill birds have a quality of their own, both in life or from the artist's work.

These cuts are the work of C. H. Latham, Lancaster, Mass. Mr. Latham

one days are still there. Surely we have much to live for.

J. D. Koons, Trichler, Pa., has been elected justice of the peace of his town. Between his White Rocks, Buff Wyandottes and this job he is liable to keep out of mischief.

Look through the American Poultry Journal. Its line of advertising is pulling its circulation astonishingly.

Henry D. Riley placed himself and his automobile at our command. It is a real treat to visit breeders in this way and we want to publicly give thanks.

Philadelphia has made good. We attended the annual meeting of the Poultry Association there. Great preparations are being made for the next show. Go to the Philadelphia show is the best word, and take your birds.

John H. Hallock has good reason to brush up some since his sweep at Boston on White Leghorns. His catalogue is a beauty. Better send for one.

Editor De Lancy of the Item was also looking around. His work surely has been most successful, and is fully deserved. The esteem he holds of all who know him, has been well earned.

The F. P. C. Poultry Foods and Remedies put up by F. P. Cassall, Lansdale, Pa., have been on the market with success for many years. Send for their circulars and mention this journal.

Do this at all times. Give us the credit due us. It will help and benefit us. All helps to make a better paper.

See the letters under the heading of "Letters from Our Subscribers" in this issue. Don't you wish to express your opinion on some subject? If so address your article to the editor. These articles help the good cause for which you are working.

EGGS HALF PRICE.

Miss Alice M. Hedges, Pana, Ill., the well-known breeder of pedigreed White Plymouth Rocks, is offering eggs at half price from her best pens for the balance of the season. Send for full particulars.

I am going to have a position at the seashore next summer, and want to make myself several pretty dresses while I have time this winter. My means are small. How can I spend what I have to best advantage.

Sweet Sixteen.
You can make as pretty a dress as a frock from Simpson-Eddystone Prints as any girl of sweet sixteen can possibly want, and you will be surprised at their moderate cost.

These beautiful cotton goods are so dainty, and the designs so pretty and stylish that they look like much more expensive materials.

Robert Bretz, R. 3, El Reno, Okla., breeder of R. C. R. I. Reds, makes the announcement that from May 15 to June 15 he will sell eggs from his best pens at one-half price. This is an opportunity that our readers should take advantage of to improve their stock and raise some prize winners, as Mr. Bretz certainly has the kind that win.

G. M. King, R. R. 1, York, Pa., breeder of Barred Plymouth Rocks, is making special prices on eggs for the balance of the season. If you want large, vigorous and beautiful birds you should order a set of two of eggs from him now. He has the kind that will please you and he satisfies his customers.

Second White Wyandotte cockerel at Boston, 1910. Bred and owned by J. W. Andrews, Dighton, Mass. Mr. Andrews won first, second and sixth cockerels in competition with the best class of cockerels ever shown in America.

a minute. Feed in variety, and keep free from lice.

Pennsylvania is a great state. Nearly all hills, but its poultrymen are on the level.

J. S. Haupt, the Orpington specialist,

besides being a Plymouth Rock artist, is one of our best known breeders. Write him for prices on work.

While in Philadelphia we could not resist the temptation to again visit Independence hall and view Old Liberty. The bell and the memory of by-

A FEW FACTS ABOUT S. C. W.
ORPINGTONS.

NOTWITHSTANDING the popularity and enormous demand for Single Comb White Orpingtons, little is found in the press regarding this valuable variety and its characteristics. It is a matter of little concern as to the origin of this variety, and since authorities differ on this subject, I shall not burden you with the information I have gathered on this subject, but to touch on the inherent and predominant characteristics will be of value.

For some years after their introduction into the states this variety had a struggle for life. It was difficult to induce American breeders to take up a new white variety, but when the public learned the value of Orpingtons as a commercial fowl, the demand began to increase, and prominent breeders who were real fanciers began to push them, and today the demand is enormous. Whether he be an amateur, or expert breeder, any one can make money from White Orpingtons. This is true more or less of all Orpingtons. Why? Simply because Orpingtons have the merits that go to make up typical commercial and fancy fowls.

As in all other varieties, however, White Orpingtons have their common defects, most prominent among which are lack of uniformity in type and brassiness in plumage in male birds. Both males and females, as a rule, run too small, are too long in leg, too narrow in body, too long and too high in tail and too long in neck. An Orpington should be broad and deep, with well spread tail, of medium length, short and heavy in shank and a cobby bird. In male birds of such type it is extremely difficult as yet, to produce pure white plumage. For this reason typical White Orpingtons that are pure white in plumage, command, and are worth long prices, and dear reader, don't annoy a prominent and reliable breeder asking him to price and thoroughly describe such a bird if you have but a few dollars to invest, or if you are unwilling to pay for such birds what they are worth. Those contemplating the purchase of White Orpingtons will bear in mind that the demand for such specimens is enormous, and this demand comes largely from a class of buyers who are willing to pay the price. Such will be the conditions for some years to come. The extreme scarcity of such birds means success and a rich harvest for the fellow who owns and produces such birds, whether he be a large or small breeder. Invest in White Orpingtons, be willing to pay what they are worth, study their characteristics, and you will make good. See to it that you get what you order, but be sure you are right in the criticism of the stock purchased if not just satisfactory. It is the purpose of all reliable breeders to please their customers, but they are many times censured without sufficient cause, all because the purchaser is unfamiliar with the characteristics of the variety.

In conclusion let me mention that in S. C. White Orpingtons it is not a question of whether you can dispose of stock, but a question of having the stock to dispose of. They sell. The live merchant doesn't carry a dead line; he handles the brand that moves. Hazelrigg, Ind. C. S. Byers.

D. E. MACGOWAN, Prop., 1129 COLLEGE ST., MEMPHIS, TENNESSEE

The Buffalo Incubator Chas. A. Cyphers

Made By

Has Made Good

THE CRYSTAL SPRINGS POULTRY CO., Oil City, Pa., markets 75,000 ducks and chickens per annum. The following letter from them speaks volumes:

"Have just completed a hatch with the Buffalo Incubator, and beg to advise you that it is the largest per cent of fertile eggs taken off this season—ninety-three per cent.

"We have ninety-seven machines of different makes, but the Buffalo is far superior to any of them. It takes less to heat it, is more easily regulated, is scientifically simplified in every respect, and certainly far ahead of any incubator on the market today. After my thirty years practical experience in the poultry business, I say to you, do not change it. In the Buffalo you have a world beater."

Patrick McEvoy, Manager.

Send your order today. Prompt shipment guaranteed. State size wanted and enclose price with order. I guarantee the Buffalo in every way to be the best incubator ever offered at any price.

Get out of the rut

Give your buildings the benefit of progress—same as you give the farm itself. Cover every building on the farm with Genasco Ready Roofing—the economical roofing that protects and lasts.

Genasco Ready Roofing

is made of Trinidad Lake asphalt—Nature's everlasting waterproofer. It prevents cracks, breaks, and leaks, and does away with damage and repairs. Easily applied without experienced help.

The Kant-leak Kleet does away entirely with cement and large-headed nails. Keeps seams absolutely watertight. Saves time in laying. Makes a beautiful finish. Ask for Genasco rolls with the Kleet packed in them.

Ask your dealer for Genasco. Mineral or smooth surface. Be sure you see the hemisphere trade mark. A written guarantee, if you want it. Gold medal (highest award) Seattle, 1909. Write for samples and the Good Roof Guide Book.

IRON AGE

Wheel Hoe, Hill and Drill Seeder.

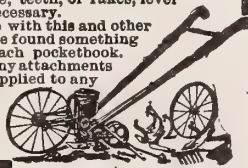

Whether the man of the house or the lady of the house or the small boy makes the garden, all of the necessary work is easily done when you use one of these tools. Does A DAY'S WORK IN 60 MINUTES.

Not only does this tool do the work more easily and better than in the old way, but you can get over your ground more often, keep the weeds out entirely and keep all of the moisture by constant cultivation. You can open furrows, sow seed and cover and roll it, mark your next row, trim out the weeds and cultivate with hoe, teeth, or rakes, level the piece of ground, ridge your rows, if necessary.

Thirty or more combinations are made with this and other "Iron Age" garden tools—in the line will be found something to fit each one's particular needs and each pocketbook. Prices run from \$2.50 to \$12.00. A great many attachments are furnished and made so they can be applied to any one of several tools, old as well as new.

Write for complete "Iron Age" catalog to-day and see which one answers your purpose best. Address

BATEMAN MFG CO., Box 563 Glenloch, N.J.

THE REDS FOREVER.

Do I really like the Reds? And, do I really believe they are the one and only breed worth while since Moses smashed the ten tablets? Or was it twelve? Caesar's grandmother's ghost! Greater love hath no man, etc. Haven't I given up all for the Reds? Haven't I fought and bled and died for the glorious old —? Oh, confound it! I never even got the nomination for alderman! What's the use? But, say, do you see me boosting anything else? Nay, not so, not even a Buckeye, with the beautiful slate, we Red breeders love so well—to see in our competitors' exhibits, our own having carefully molted theirs in due time. And then, too, haven't I given in, after worshipping (briefly, to be sure) at the shrines of any number of the fifty-seven varieties in 'poultrydom'? Haven't I had the

Pullet breeding Barred Rock cockerel. Bred and owned by H. Burkholder, Clyde, Ohio.

Rocks and Orpingtons that would condescend to begin laying at ten months of age, and haven't I had Wyandottes that wouldn't begin laying at all until I chopped off their heads, and haven't I had the Leghorns that would fly from their yards to the peaks of house and barn? Well, guess no more.

Oh, I'm not so lonely as I was some years ago, when Red ads were as scarce as poor men in the United States senate, or honest Pittsburg aldermen. Today you might almost think at times that there were only two breeds of poultry, the Reds and the Not-Reds, in spite of a vague remembrance that there really are a multiplicity of varieties of Rocks and 'Dottes, et al. And then, O sadful thought! We have no Red millionaires who take thirty-seven pages of display and write-ups per issue, with six columns of winning firsts, seconds, thirds,

McCUE'S "RINGLET" BARRED PLYMOUTH Rocks—Unexcelled in size, vigor, beauty and eggs. Winnings, Richmond, January, 1910, first cock, first, second, fourth and fifth cockerel, special best display. Choice stock. Exhibition eggs, 15 for \$4. Utility, 15 for \$2. LESLIE H. McCUE, State Vice-President American Poultry Club, Box 16, Greenwood, Va. 2-12

Everybody Was There

At New York 1908-10

That's the kind of competition Duston's birds want. I won first collection for the second time in three years. Winning first cockerel and A. P. A. special for best male. Shape and color specials and first pullet and many others and only lost first pen on account of an accident to the tail of the male. "I was sorry to throw down such a pen, but had to punish him for it," the judge said, and many expert judges have said that year was the best judged class in years, and certainly was one of the hottest classes ever brought together. If I had a million or two and was determined to win New York I would not be satisfied with the 2d or 3d year after year. No, not if it took a thousand dollars each to buy up half a dozen flocks. But the real enjoyment to one is to go down with a bunch of your own and WIN and reader that is the kind of stock you want. If you do and want good care write to me. Send 10c for a catalogue, stating wants in stock and eggs. 16 years a White Wyandotte specialist. The breeder who has made possible the world's best flocks.

Arthur G. Duston, Box 1020, South Framingham, Mass.

fourths, fifths to sixteenths, won without any competition, of course. If we only had some of these to boom the Reds, and a plentitude of pliant Paderwskis to take our birds at \$1,500 per. But, alas, and still more alas! Why, we are even short on 297 and 365-egg hens and 2-egg-a-day strains, but we are coming along the line. Just get a hen to lay thirty eggs one month and multiply that by twelve. It is so easy to get 360-egg hens. Or, if we are more modest, or less persevering, get one to lay twenty eggs one month. That means 240 eggs. Then add six or seven for good measure. That is coming some. Furthermore, or still yet, five and ten thousand dollar birds are most fearfully scarce with us, as yet. But, that makes me think—At times our memories are pretty short. Sometimes I wish they were more so. Lord, deliver me! Once, during an attack of mental aberration, I put a long price on a bird. Was I the first of the ten thousand dollar string? Woe is me! I fear it. But, now every fancier has them, from Kansas City to Podunk, Maine. Next time I essay to ride the clouds, 'twill be a million, no less. Pike's Peak or bust! Give me liberty or passage to Paradise! Down Venus! Up Mars!

Edwin R. Cornish.

Ann Arbor, Mich.

S. A. Nofztger, secretary-treasurer of the American Partridge Plymouth Rock Club, North Manchester, Indiana.

At a meeting held at Indianapolis, Ind., February 9, 1910, the American Partridge Plymouth Rock Club was organized, with E. L. Howard, Illinois, president; W. T. Bull, South Carolina, vice-president; S. A. Nofztger, secretary-treasurer.

The membership fee was placed at \$1. Those interested in this grand new breed are requested to join the club at once.

Address S. A. Nofztger, Secretary-Treasurer, North Manchester, Ind.

THE NATIONAL S. C. WHITE LEGHORN CLUB.

We are just in receipt of a copy of the new catalogue of the National Single Comb White Leghorn Club, which is just off the press. This is one of the most up-to-date catalogues we have received this sea-

son, and shows that this club is up and doing things. It is full of interesting and instructive reading matter, and should be in the hands of everyone who is interested in this variety. For full particulars about this catalogue and club, write the secretary, F. O. Groesbeck, Hartford, Conn.

AMERICAN BUFF LEGHORN CLUB.

The year book of the American Single Comb Buff Leghorn Club is just out and will be mailed to every person interested in this variety. The book contains much interesting reading and valuable information. Every breeder of Brown Leghorns should be a member of this club. Write to E. W. Staebler, Sec., West Park, O.

AMERICAN INDIAN RUNNER DUCK CLUB.

Indian Runner duck breeders at the Alaska-Yukon-Pacific Exposition, realizing the necessity of some united effort to push their breed to the front, have organized the American Indian Runner Duck Club. It was decided to instruct the secretary to get out a letter to the poultry press of the country, asking the editors to give as much publicity as possible to their club.

All persons who send \$1.50 for first year dues before June 1, 1910, will receive a setting of ten eggs free. This is the best offer ever made by any specialty club. The secretary is now at work on the first annual year book. In order to make as creditable a showing as possible, we invite all Indian Runner duck breeders to join. Members will have an oppor-

tunity to compete for silver cups, club badges and specials.

All members and breeders of Indian Runner ducks are requested to use as much space as they can afford in the poultry journals, in order to show that our breed is as profitable (if not more so) than many varieties of chickens.

We invite all secretaries of poultry shows to submit offers for our next annual meeting. Address all communications relative to the club, to

N. M. Barth, Secretary,
4829 37th Ave., N. E.,
Yesler, Wash.

To My Friends and Advertisers:

I am sorry to inform you that I am and have been quite ill. Am confined to my bed and utterly unable to attend to business in any form. I cannot, therefore, in this issue give any of you my personal attention, much as I should like to do so.

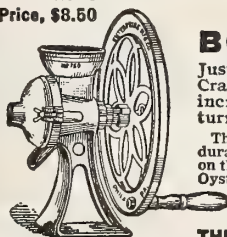

I have had a number of communications which I have turned over to others and trust they will attend to your wishes satisfactorily.

Regretting that I cannot give you the good things I had planned for this issue, and trusting I may be with you again next month, I am, with best wishes for your success,

Very truly yours,
C. W. Zimmer.

Eggs at Half Price

From May 15th to June 15th I will sell eggs from my best pens of

R. C. R. I. Reds at \$5 Per 15

No better stock anywhere and I guarantee satisfaction in every particular. Write for prices on exhibition pens for the early fall fairs. I supply the winners. Send for mating list and mention American Poultry Journal.

Robert Bretz R. R. 3 El Reno, Oklahoma

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question.—(1) Is the market in the vicinity of Chicago oversupplied with eggs? (2) In your judgment, would this locality—70 miles west of Chicago—be a favorable place to start in the poultry business, the intention being to supply the market with strictly fresh eggs the year round?

D. A.

Belvidere, Ill.

Answer.—(1) No. (2) Yes.

Question.—What kind of chickens make best broilers?

H. E. W.

Aberdeen, Wash.

Answer.—This is, to a certain extent, a matter of opinion, but it is a well-known fact that any of the American varieties make excellent broilers, and especially the White Wyandottes.

Question.—(1) What is the best way to store eggs to keep them until winter? (2) What temperature should eggs be kept in from time of laying until they are put under the hens to hatch? (3) How soon should moisture pans be put in an incubator in a dirt cellar?

Denver, Colo.

M. J. I.

Answer.—(1) Preserved in water glass. Our Hand Book will tell you how. Price 25 cents. (2) From 50 to 60 degrees. (3) This would all depend

on the condition of eggs being incubated and the incubator used. Some machines don't need any moisture, and don't believe moisture is necessary in your case. It certainly is not unless the eggs are drying down too rapidly, and this you can determine by their appearance. As a rule moisture pans are not put in before the 15th to 17th days of incubation.

Question.—(1) What are the weights of the Ancona pullets, cockerels, hens and cocks? (2) Which is conceded to be the best winter layer, the White Leghorn or the Ancona, under the same condition? (3) What would be the outcome to breed sisters and brothers, and pick out the best cockerel and pullets and breed them together for one season if would be no bad results? How long could you breed them in that way?

Vowinkel, Pa.

J. F. F.

Answer.—(1) No Standard weight given for Anconas. (2) We don't believe there is much difference in these two varieties as far as winter egg production is concerned. (3) Unless you are thoroughly familiar with line breeding this is a dangerous practice. Read our book, "Why Poultry Pays and How to Make It Pay," which contains a

good chapter on line breeding. Price 50 cents.

Question.—Will you please give me the name of the disease my little chicks have, also the cause, and a remedy? They are about 2 weeks old. They begin to look droopy and stand with their heads real high and thrown somewhat backward, opening their mouths regularly. Their mouths are clodded with a yellow substance, not very hard, but real sticky and shiny. Some of them have this substance all down their throats, under their tongue and in the roof of their mouths, while others are affected only in the roof of the mouth, this being swollen and sore and not so much yellow stuff. They can hardly shut their mouth, it is so full, and it seems that they cannot breathe well nor can they hardly eat. Sometimes water runs out of their mouths, which is full of little bubbles. The droppings of some of the chicks look natural, while of others it is almost like clear water, with some yellowish white in it.

Lizella, Ga.

N. N. H.

Answer.—These chicks must have been bred from diseased stock or subjected to severe treatment, for it is very uncommon for chicks of that age to get in the condition described. They evidently have canker. Don't believe you can do anything for them, although you might try some of Conkey's canker cure.

Question.—(1) I have twenty-five pullets hatched last May and June. They began to lay during January and now I get from fifteen to seventeen eggs a day. They are White Rocks and a

Incubator

Users; We want to thank our many thousands of friends among the users of incubators, who so generously responded to our advertisements during the season just past. We believed that you would appreciate an honest, dependable Thermometer and Hygrometer—as good as it is possible to make—and that an honest price would be a satisfactory price for "Tycos" instruments.

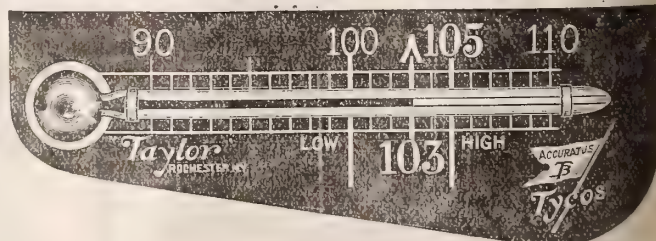

We do not want to do a mail order business. We were very much handicapped to take care of the hundreds of friends who sent direct to us for "Tycos" Thermometers and Hygrometers. We much prefer to furnish you through your dealer, or that you buy an incubator or brooder equipped by its manufacturer with "Tycos" instruments. A "Tycos" Thermometer or Hygrometer is the mark of quality which proves that the maker puts value into his machine, regardless of cost, and that quality will naturally extend to all parts of his machine.

Where it is impossible to obtain "Tycos" instruments of your dealer, we will fill orders at all times, at regular prices: "Tycos" Incubator Thermometers, each 75c, two for \$1.25 postpaid. "Tycos" Incubator Hygrometers, each \$1.50 postpaid.

There are enough difficulties to overcome to insure a good hatch of healthy chicks, and certainly the best Thermometer should be in the incubator YOU buy for your hatch.

When buying a hatching or brooding outfit see that it is equipped with "Tycos" instruments. Insist upon the brand "Tycos"

If you have not a copy of our free booklet, send for one today.

Taylor Instrument Companies

cross between Light Brahmas and White Rocks. Is this a good average? How many eggs ought I to get from them? (2) Are White Orpingtons more delicate than White Plymouth Rocks? (3) Which is the best table fowl? (4) Can you tell me if Peep o' Day coops are still sold, and where I may get them near Boston? (5) Are eggs laid by White Orpingtons as brown in color as those laid by White Rocks? M. S. Cohasset, Mass.

Answer.—(1) This is a good average. (2) We don't think so. (3) This is simply a matter of opinion. (4) Don't know. We don't see them advertised any more. (5) As a rule they are not.

Question.—(1) What is intensive farming? (2) What breeds are non-setters. J. H. L.

Kargley, Ill.

Answer.—Concentration of effort on a small amount of ground. (2) Leghorns, Anconas, Hamburgs, Minorcas.

Question.—Will you please inform me how many hens should be placed in a pen with one cock, and also how long should they be kept together until eggs would do for setting? Mrs. J. N. P.

Ferron, Utah.

Answer.—From eight to twelve. Eggs are usually fertile after the first week or ten days.

Question.—(1) Kindly let me know through the A. P. J. what caused a hen to lay an egg $4\frac{1}{2}$ ounces? (2) I would like to know if I buy some eggs or chicks from, let me say, Mr. A, and some of one of his customers and mated them, will the young stock's feathers

be suitable for showing?

Kensselaer, N. Y.

Answer.—(1) This is no unusual occurrence. (2) If properly mated they would.

Question.—(1) Are bantams as profitable, as layers, as large hens? (2) What kind of bantams are the best layers? (3) Does it injure bantams to inbreed them? (Some say that it only runs down their size, which is desirable.)

Skowhegan, Me.

F. D.

Answer.—(1) No. (2) Cannot say. (3) It injures any variety of fowls to inbreed too closely. It weakens their constitution and they are more liable to disease.

Question.—Please tell me in your next paper could trap nests be used where hens have free range. W. P. G.

Gastonia, N. C.

Answer.—Not to good advantage.

Question.—(1) What is the weight of White Orpingtons? Also of Barred Plymouth Rocks? (2) How would you advise feeding pork cracklings—made in a soft feed or feed them dry? (3) Is it best to feed heads of clover dry, or is it best to moisten with water? (4) This year I am mating a White Wyandotte cockerel to pullets hatched from the same eggs. Now would you advise me mating them next year?

Tenn, Ill.

C. R. M.

Answer.—(1) Orpingtons—cock, 10 lbs.; hen, 8 lbs.; cockerel, $8\frac{1}{2}$ lbs.; pullets, 7 lbs. Plymouth Rocks—cock, $9\frac{1}{2}$ lbs.; hens, $7\frac{1}{2}$ lbs.; cockerels, 8 lbs.; pullet, $6\frac{1}{2}$ lbs. (2) Feed in soft feed. Not more than two ounces to each fowl.

three times a week. (3) They should be steamed over night. (4) You should secure new blood for next season.

Question.—Will you kindly tell me in your next issue of the Journal what to do for hens that lay soft eggs?

Ft. Madison, Iowa.

Answer.—Feed more shell-forming material, such as wheat bran, oyster shells, etc.

Question.—(1) Can you tell me through your next issue what is the matter with my little chicks, some of them when first hatched seem to have lost all power of controlling their necks? I never had one live over two days. Some have told me it might be caused by too close relation in my chickens, but I have been very careful about that. The chicks shake their heads and tip them back at the same time and at last fall on their backs and can't get up. (2) Do hens lay eggs with a hard shell or do they lay the egg with a soft shell and it hardens after the air strikes it? (3) Do ducks and chickens do well in the same coop?

Grayling, Mich.

Answer.—(1) If these chicks were hatched in an incubator the trouble was probably caused by too much or too little heat at some period during incubation. (2) The shell is hard before being laid. (3) No.

Question.—I have a flock of Partridge Wyandottes and during the last year I have lost six or seven. Can you tell me in your next issue what the trouble is and what would be a good remedy? When they are first taken to the coop.

Manufacturers and Poultry Supply Dealers;

You have noticed our advertisements in the poultry and farm papers during this and last season. Thousands of poultrymen from all parts of the United States, Canada and foreign countries responded asking for Booklet, prices and where "Tycos" instruments could be purchased.

We are convinced, by this demonstration, that the poultry raising public is interested in an honest, dependable, highest quality Thermometer and Hygrometer, and that they are satisfied to pay a fair price for "Tycos" instruments.

You, who equip your incubators and supply your trade with Thermometers and Hygrometers branded "Tycos" will profit by this advertising in seasons to come. We have no desire for retail trade, but this advertising is a part of our plan of co-operation with Manufacturer and Supply Dealer.

To our mutual friends, the users of Incubators, Thermometers and Hygrometers, we have repeatedly written: "You can depend on it that the manufacturer who furnishes "Tycos" instruments is giving you the best that money can buy, regardless of the fact that he can buy cheaper Thermometers, and this principle will hold good in the making as well as the furnishing of his machine."

You will note that our advertising is not "spasmodic" as it will be continued next season in increased volume. Get in touch with us now, before contracting for next season's requirements. The "Tycos" Thermometer will be a feature of popular incubators.

CHICK MURDER -HELP US STOP IT

EACH RETURNING SEASON in this land of freedom, of high intelligence and wonderful progress, *millions of eggs* are set and many hundreds of thousands of chicks are hatched, but who can tell us what per cent. of these chickens are raised to maturity?

**CYPHERS CO.'S
CHICK FOOD.**

This 100-pound bag will feed 100 Newly-Hatched Chicks four weeks, or 50 chicks six to seven weeks. Price, \$2.50 f. o. b. Buffalo, Boston, New York City, Chicago and Kansas City. Price f. o. b. Oakland, \$3.00.

reduce this frightful loss—and with increased success each season. The *main cause* of the country-wide waste in chick-life is the feeding of wet mash, sour food and guess-work, coarse-grain mixtures. The *absolute remedy* is the use of dry-grain, well-granulated, machinery-mixed chick food composed solely of sound, wholesome grains that are *rightly balanced* to supply every need, every requirement of the growing chick—*bone, sinew, flesh and feathers*.

CYPHERS CO.'S ADAPTABLE HOVER.

Price, Complete with Regulator, Safety Lamp and Tested Thermometer, securely boxed for shipment, \$8.50, f. o. b. Buffalo, Boston, New York City, Chicago and Kansas City. Price f. o. b. Oakland, \$9.50.

If the Census

takers for 1910 were to report on this death rate, **ON THIS ENORMOUS NATIONAL LOSS**, the facts would be something appalling. And this great but **NEED-LESS** waste occurs every year of our lives!

For Ten Years

Cyphers Incubator Company has been doing *all in its power* to re-

If Your Chicks, reader, are not *growing rapidly*, if they seem droopy and show signs of diarrhoea—or, *worse still*, if they are dying one after another from some unknown cause, **WE ASK YOU**, in your own best interests, to change your feeding method for a few days—to accept our advice *just once*—advice that is based on *twelve years of actual experience*.

Our Reputation At Less Than \$3.00

Look at it this way: The cost to you of *testing our strong claims*, of learning for yourself whether or not we know *what we are talking about*, whether or not we are reliable and worthy of your confidence—the *total cost to you* of finding this out and at the same time saving your chicks from sour-crop, bowel disorder, leg weakness, diarrhoea and even cholera, is *less than \$3.00!*

Less Than Three Dollars will buy for you *sealed bag* of Cyphers Granulated, Dry-grain, Machinery-mixed Chick Food, which will feed 100 newly-hatched chicks the first four weeks, or will feed fifty chicks six to seven weeks. We repeat, *in your own best interests*, try one sample bag even though you feed it to only a single lot of chicks, *doing so as a test* and our word for it, on the basis of this company's business reputation, *you* never again will go back to the hit-or-miss way that now, throughout the country, is resulting in a *wholesale murder of valuable chicks*.

We Were Pioneers in the manufacture and sale of granulated, dry-grain food for little chicks. Our brand of Chick Food has been in successful use ten years! We sell millions of pounds of it *every season*. Each spring and summer a great number of experienced, successful poultry raisers *use no other grain food* for their small chicks. All chicks produced on the Cyphers Company's \$40,000 poultry farm are fed this food and we grow them every year by the thousands. This, Reader, is what we mean by actual experience! You will at least admit that *we ought to know* what we are talking about.

Consists of Seven Different Grains

Cyphers Chick Food consists of seven different grains, and is a properly-balanced, long-tested, *scientific* ration. It is a *complete food* for young

chicks—no other grain ration being required or advisable. This food is *guaranteed by us* to be composed entirely of sound and wholesome grains—no weed seeds, no by-products, no waste materials, no grit. It is granulated and mixed by special, *patented* machinery, and is always the same—*always reliable*. Cyphers Chick Food—the genuine trade-mark article—is **PUT UP IN SEALED BAGS** to prevent substitution and to protect the interests of thousands of earnest men and women who *year after year* are raising chickens "the Cyphers Company way."

We Ask You, Reader, to try our way, and to do it now, when it will profit you most. One bag will tell the tale. The cost is a mere trifle. It will neither break you nor make us! At today's high prices for sound, sweet, wholesome grain you could not buy the separate ingredients of this food at a lower cost from any local feed dealer. Besides this, there is the *correct formula*, the special machinery, the cost of manufacture, *our guarantee* and the sealed bag for your protection.

Send today for our Special Chick Food Circular just issued.

WYANDOTTE CHICKS RAISED ON CYPHERS CO.'S DRY-GRAIN FOODS.
At 10 weeks old a Pair of these weighed exactly six pounds.

Cyphers Chick Food is sold in 50 and 100 lb. bags. Every sack contains full directions for *correct feeding*. One pound will go as far and *do more good* than two pounds of ordinary, waste-product "chicken feed." It is always *ready to use*—and there is no waste. It *preserves* chick-health—the natural state; it *insures* rapid growth and is equally valuable for hen-hatched and for incubator chicks. For a trial 100-lb. bag, send \$2.50 to any of our places of business except Oakland, Cal., and London, England. (Oakland price per 100-lb. bag is \$3.00.) Order from our place of business nearest you and thus secure low freight rate and quick delivery. Quantity prices mailed on request.

1569 Broadway.

TEN YEARS TESTED -DON'T TAKE CHANCES

AMONG ALL THE VALUABLE DISCOVERIES made in behalf of poultry-keepers during the last dozen years, *the greatest in vital importance* is the use of dry-grain, evenly-granulated, properly-balanced food for little chicks in place of the raw and "cooked" messes and the coarse-grain, irregular mixtures that were fed to chicks "any old way" *until recent years*, even by well-informed poultry raisers.

Recent Poultry Discoveries

Open-front or curtained houses for adult fowls, thereby doing away with frosty-walls and moisture-soaked, disease-breeding litter was a valuable discovery.

The self-regulating and self-ventilating type of brooding hover without central heat dome, which prevents the chicks from overheating,

from chilling and crowding and from *breathing vitiated air at night*—this also was a long step in advance.

And the introduction of hopper-feeding for adult fowls on range and of *deep-litter feeding* for chicks kept in confinement was an important addition to the practical knowledge of up-to-date poultry keepers.

Greatest in Real Value

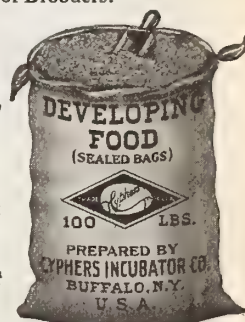

But the discovery of the *great benefits* to be obtained by the use of a dry-grain, well-granulated, properly-balanced, *scientific ration for little chicks*, whether hatched in incubators or by hens, was by long odds *the most valuable*, because of the actual saving it produces for each individual poultry raiser and the *enormous annual waste* it is certain to stop as soon as it is everywhere adopted.

ON THE OPPOSITE PAGE we have made a strong appeal to poultry raisers who "mean business" to *put to the test OUR ADVICE* about the use of dry-grain, evenly-

granulated, correctly-balanced food for little chicks; *on this page* we present as many *sample reports* from pleased and benefited Cyphers Company customers as there is room for.

We also publish herewith a limited number of reports from men and women who are using our World's Challenge, Adaptable Brooding Hovers, and Style B 1910 Three-Apartment Out-door Brooders.

No argument is needed to convince poultry raisers that in order for young chicks to *do well and GROW RAPIDLY*—no matter how fed—they must be kept in safe and comfortable quarters, *especially at night*. The reports here with were unsolicited.

CYPHERS CO.'S "DEVELOPING FOOD."

This is a Medium-Granulated, five-grain *balanced ration* that we advise our customers to feed to Growing Chicks Between the Ages of Six and Twelve Weeks, before they are given whole Grain. Prices, May and June, 1910, \$2.00 per 100-lb. bag, f. o. b. Kansas City and Chicago; \$2.25 per 100-lb. bag Buffalo, Boston and New York City. Oakland Price, \$2.50 per 100 lbs.

Reports From Customers

A. J. LOUIS, Hackley, Wis.:—"We are using your Chick Food and Developing Food and find that it pays to use them."

W. H. MESSICK, Louisville, Ky.:—"Attribute my poultry success to following your directions carefully and using your Chick Food and Developing Food."

J. C. PUNDEFORD, Monmouth Poultry Farms, Freneau, N. J.:—"Like your Chick Food best of any. Tried other brands, but came back to yours as one on which we can depend."

MRS. F. M. BOSTICK, Box 423, Hot Springs, Ark.:—"Have used Cyphers Incubators, Cyphers Brooders and Cyphers Chick Food for six years. My hatches range from 80 to 90 per cent. of fertile eggs. Last year we raised .95 per cent. of all the chicks hatched."

WELLES & RUSSELL, Center Moriches, N. Y.:—"While using your ready-mixed foods for chicks we tried other makes, but returned to the Cyphers brand, finding that we could not equal it in quality or in good results."

FERNWOOD POULTRY YARDS, Ormsby, Pa.:—"Find your Chick Foods the best on market. Used them exclusively for last four years and by their aid we raise big, healthy, robust chickens."

JAS. C. B. READ, Fruitvale, Calif.:—"Tried several brands of local chick foods, then adopted yours exclusively, and am rewarded with the healthiest and strongest chicks I ever raised. Had pullets laying at less than five months old. Cannot speak too highly of your Chick Food and Developing Food."

GEO. BRONS, Jamaica, L. I., N. Y.:—"Bought one of your Outdoor Brooders recently. It is the best I have ever seen. It raised every healthy chick I put into it. I feed your chick food and it is the best ever. It is easy to feed and the chicks grow rapidly."

T. WARREN SUMNER, Elizabeth, N. J.:—"Your Outdoor Brooders give remarkable satisfaction. Have little difficulty in raising 90 per cent. of the chicks I place in them. Am using your Chick Food exclusively, excepting an occasional feed of rolled oats. Practically all my prize birds last year were raised this way."

MR. and MRS. P. MARTINES EST, Rocky Hill Farm, Rehoboth, Mass.:—"We installed four of your Cyphers Adaptable Hovers with fine success and six more will be installed this week. Have decided to use Cyphers Company goods exclusively and will send you another order soon."

REV. GEO. F. BAKER, Hunterstown, Pa.:—"About a year ago I purchased from you one of your Style B Outdoor Brooders, also several hundred pounds of chick food, beef scrap, etc. Found everything very satisfactory and am recommending your goods to all interested persons."

TRIED 72, THEN BOUGHT 100

R. P. ELLIS, Proprietor Aurora Leghorn Farm, Brooklyn, N. Y., and founder of the Aurora System of Branch Farms, for the season of 1908-1909, bought 72 Cyphers Adaptable Hovers, and early in March, 1910, placed his order with us for 100 more. March 31st, 1910. Mr. Ellis wrote us:

"A long and diligent search has convinced us that you have produced in the Cyphers all-metal Adaptable Hover the finest brooding device thus far given to the poultry world. The essentials of a brooding system for a commercial plant are: (1) Efficiency, (2) Convenience, (3) Safety, (4) Economy, (5) Durability. These your hover meets better than anything I know of. Our home farm and a majority of the branch farms are using your Adaptable Hovers and they are giving complete satisfaction. Yours very truly,

R. P. ELLIS."

Back of Seal

E. D. ALLEN, West Brookfield, Mass.:—"Have fixed up a box and attached to it one of your Adaptable Hovers. I like it very much. One of my neighbors saw mine and has sent for one like it."

WM. H. MECHINEL, Aberdeen, Md.:—"Am using your insurable Adaptable Hovers in my colony houses and find them economical and very satisfactory."

remain all day on the roost and when forced to fly down they will fall. Seem to be weak in the legs. Will stand with head drawn down. Have a thin white discharge. In four or five days will fall back on their haunches with their legs sticking out in front. They will live from a week to four weeks. Some of them will eat to the very last, even after they cannot stand up, while others will not eat from the first. The comb will remain red, but after a few days turns a blacker red.

Payette, Idaho.

W. W.

chlorate of potash in the drinking water. Feed boiled barley and rice with warm milk and bread for two or three weeks.

Question.—(1) If different breeds are mixed and then separated, how long will it take before the eggs are fertile and in good condition for hatching pure blood chicks? (2) How much is a S. C. White Leghorn cock worth that scored 93?

J. L.

Princeton, Ill.

Answer.—(1) This depends on whether

A CORRECTION.

On page 566 of our April issue appeared a half tone illustration of Rose Comb Rhode Island Red female and through error the description read Single Comb. Of course most of our readers knew this was an error, as they know Simmons & Crittenden, Geneva, O., do not breed Single Comb R. I. Reds. The bird mentioned was first prize Rose Comb Rhode Island Red hen at the late Buffalo show; also winner of second at Youngstown, Ohio, this year.

BUFF PLYMOUTH ROCK COCK.

The Buff Plymouth Rocks at the great Missouri State Poultry Show held at St. Louis, Mo., December, 1909, formed one of the strongest and best classes ever brought together in the West. Mr. W. S. Robison, Payette, Mo., was the fortunate winner of first on pen and we show here the portrait of the grand male heading the pen. He was an excellent type of bird with plenty of good qualities that stamp him as a desirable breeder. Mated to him were four evenly matched females, and together they made a fine appearance and reflected much credit on their owner as a breeder and exhibitor of high quality Buff Plymouth Rocks.—A. O. Schilling.

Answer.—The trouble was enteritis, which is usually caused by the fowls being kept in a filthy condition. Treatment: Give salad oil to remove irritating matter. Follow this with mucilaginous liquids, such as tepid barley water, arrowroot, milk and isinglass. Keep the bird on an ample and very soft bed. When convalescing give

they are old or young stock. If old stock, about ten days or two weeks. If young stock, they are liable to always show the effects of the mixture. (2) This would depend on his breeding qualities. He might be worth more than the score would indicate, or he might be worth less. Five dollars would probably be a fair price for him.

Do not forget that one year's subscription to American Poultry Journal, Western Poultry Journal and Farm Poultry can be had by sending in 75 cents to American Poultry Journal, 358 Dearborn street, Chicago.

The breeder who succeeds is the one who tries.

Eggs or Day-Old Chix : Buff, Black and White Orpingtons

MADISON SQUARE, INDIANAPOLIS, CLEVELAND AND CINCINNATI 1st PRIZE WINNERS

All infertile eggs and dead chicks replaced. Send today for 1910 catalogue, fully illustrated with photos, etc.

WILL H. SCHADT : : : : BOX 6, GOSHEN, INDIANA

IT IS "NEVER TOO LATE TO MEND"

Are you satisfied with present results? Can you hatch 90 per cent of all eggs used? Remember your best and early layers are now laying weaker eggs. You lose if you use them for hatching. Have you not, already, lost two dollars both in eggs and chicks many times over? 17.00 now in use. The best layers are hatched from eggs testing "xx" and "xx." The 1910 International Silver Trophy was won by those hatched from eggs selected by the Magic Egg Tester. 60-day trial allowed and money returned if not satisfied. By mail, complete, \$2. Rush orders sent on first mail.

Bridgeport, Conn. Magic Egg Tester Works, Department B Buffalo, New York

From the \$8 Setting of Eggs

I bought of you last spring, I reared eight chickens to maturity, four cockerels and four pullets. I exhibited at a few shows and never failed to WIN THE BLUE. Two of the cockerels scored 94½ and one of the pullets scored 95½, and none of them went below 94 points. This surely proves the quality you send out in your eggs for hatching.

Cambridge, Jan. 18, 1910.

Respectfully,

Martin E. Johnson.

\$290 Worth of White Plymouth Rocks

were reared from this one setting of eggs. Many others did as well, some even better than Mr. Johnson, and there is no reason why this season those who buy our eggs cannot do even better, for our matings are far superior to those of last season. If you will stop for a moment and consider the matter you will see that when buying eggs for hatching it pays to go to the fountain head of the White Rocks where you can secure blood lines no other breeder can give you. Our prices for eggs remain the same, viz.:

**\$8 per 15; \$15 per 30;
\$25 per 60**

You ask how we can afford to sell them so cheap? We say we want to give our customers more than value for their money.

U. R. Fishel Pleases His Customers

is a household word wherever anything is known about poultry. I have a lot of very choice cockerels yet to sell; splendid fellows. In fact, anything you want in White Rocks we can supply you. Send two dimes for 56-page catalog, the best ever issued.

U. R. Fishel, Box A, Hope, Ind.

Hints for the Month

Written for American Poultry Journal by Percy A. Cook, Scotch Plains, N. J.

Now that the grass is green it is very liable to give the birds bad diarrhœa, as they nearly always eat too much at first; if birds have had lots of green food during the winter they are not so liable to be affected. I would hardly recommend the birds shut up and only let out for a short time. I think the better way is to let them eat all they can, but use a preventive for the diarrhœa; chalk is one of the best things, either powdered or in blocks, as the birds will peek at it. It should only affect the birds about a week to ten days; they will then get used to it. If birds are in runs without grass, try and give fresh cut lawn grass. This will keep up and increase the egg yield and also the fertility.

Much is written regarding the chicks dying in the shell, and we see advertised remedies for the same, but when one reads about them they are nothing. I recommend, for prevention of chicks dying in the shell, the following, but some will still die in the shell, and no one can prevent them. See that all the fowls are free from lice, give plenty of green food, don't overcrowd; do not have the sleeping house warm, and give eggs, whether under hens or in incubator,

plenty of moisture. If all of these are observed, and fresh eggs are used, there will be a minimum of chicks die in the shell. Regarding the age of eggs for hatching purposes, of course the more fresh the eggs the better, but the limit one can keep them and still have good results I have found to be three weeks for hens and ten days for an incubator. I would guarantee results from eggs this age, but not longer.

As the season advances, so eggs are more liable to run a little off in shape. This is usually caused through the oviduct being overworked and sometimes the hens too fat. An egg that has a rough shell is O. K. to hatch, but those with a heavy ridge around I would not recommend, as deformed chicks are liable to be the result.

May is the best month usually for raising chicks here and in most of the middle states. I mean that they grow faster during this month. If you have a hen that is brooding her chicks, have a board floor in the coop. Some people use the earth or grass for the floor; if this is done and heavy rains come, the chicks will have to be moved into a house. Always

have plenty of soft material on the bottom of the coop or brooder.

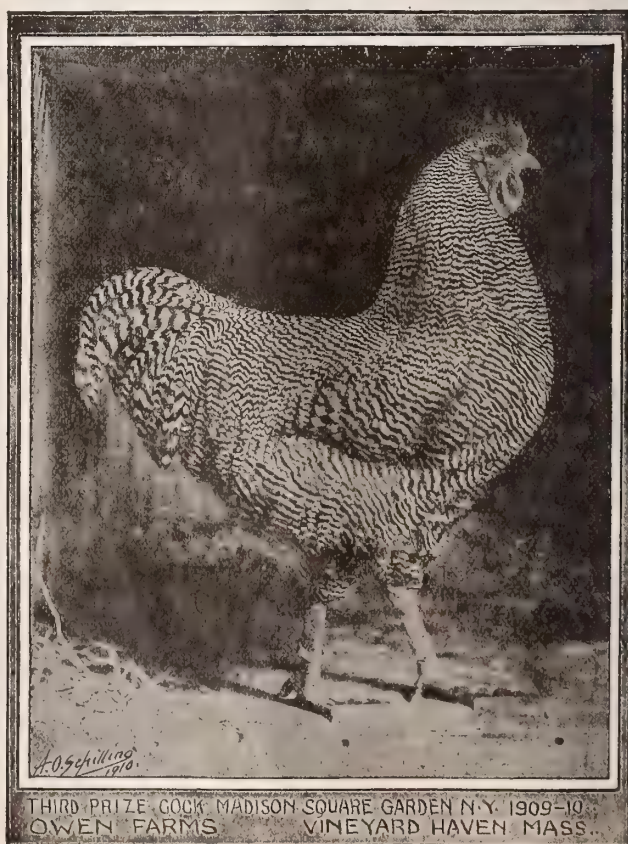

If incubators are run in an outhouse, and not in a cellar, they should be looked at several times a day, now the weather is getting warmer, and the wick should be turned lower. I prefer to run an incubator by the lamp than by the damper as long as this is somewhere near right. Several times in the course of the hatching season incubators should be taken out of doors and given a good scrubbing out and also airing.

At this time of the year one often sees the back of the hens getting bare, and some people think there is something wrong with them. This is caused by the male bird, as the season increases, so it is easier for the feathers to come out, when a bird gets very bare, it is well to look at the hens, as sometimes the spurs or the claws, if sharp, will cut into the side of the hen and open them up. This is, of course, aggravated every time copulation takes place, and then the dirt from the rooster's feet getting in, mortification will soon set in. When a bird is found in this condition, isolate at once; wash with a strong antiseptic, taking away any dead flesh, and grease with carbolized vaseline or iodoform; attend to this daily. If the bird has a fever, give half a teaspoonful of Epsom salts in six of warm water. Spurs, if too sharp, should be cut and filed round at the ends. On fine days open up the brooders.

The greatest trouble usually found in raising young chicks is worms in the intestines. These kill more chicks than any other thing. The sure preventive, and also cure, is "Cook's Roup and Worm Powder." I mention this, as I have tried this and have never had a case of

BUFF PLYMOUTH ROCKS

The Nuggets lead the world—always did and will, and are recognized as champions of America. Our cock, NUGGET, JR., and pullet MISS NUGGET, easily ran away with the BLUE RIBBONS at the late Madison Square Garden Show, N. Y., 1910. Is this not sufficient proof that the NUGGETS are superior to all others?

If you want EGGS from the proven best come to headquarters. We have furnished Madison Square Garden winners for years. Our business is raising Buff Rocks for the Big Shows, helping others to win, and if you want eggs from PROVEN BREEDERS—from the strain that has a record with them from start to finish. Give us a trial and be convinced that we can sell you EGGS or BIRDS that will do you good. EGGS \$2.50, \$3, \$5, \$7, \$10 per 15. Eggs from NUGGET, JR. mating, containing first, second and third prize Madison Square Garden females, \$10 per 15.

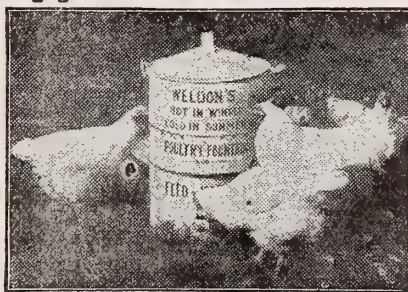

The Nugget Poultry Farm, C. L. Pensyl, Prop., Box A, Bloomsburg, Pa.

Raise 30 Per Cent More Chicks

THIS you will surely do if they are properly fed and watered. Improper feeding and impure water causes the death of more young chicks than anything else, and every chick you lose increases your cost of production just that much more.

Weldon's Hopper Feeder

is the only one which allows the fowls to feed as nature intended—that is, little and often and as appetite dictates. There is no possibility as there is with other hoppers, for the strong to crowd away the weak and no opportunity for the greedy fowl to gorge itself to its own undoing. There are holes in the side of the hopper just large enough to allow the grain to go through without flowing. These holes are made smaller by a metal band which slides up and down. The grain must be picked from these holes by the fowl. Everyone shares alike. Dropping grain is caught in the trough. None is wasted.

WELDON'S POULTRY FOUNTAIN keeps the water pure and at just the proper temperature. Our FREE BOOK gives the experience of successful poultrymen with this wonderful invention. Ask for it.

Try One or Both, Ten Days at Our Risk

Our valuable book—sent FREE for the asking—gives results from experiments so remarkable that every poultry raiser will want to make them for himself. To make this easy we will send either the fountain or Combination Outfit for 10 days' use at our risk; without the slightest obligation to keep it unless you choose. Say when you write whether you would like to try the outfit or read the book first. Be sure to answer this advertisement as trial outfits must be sent out in the order requests are received. All the best poultry houses carry it.

Andrews Wire & Iron Works
S. C. R. I. Red : : Rockford, Illinois

worms and never know it fail to cure. Birds that are inbred are more subject to worms than others. A bird suffering from them is easily picked out from the rest. They stand in a heap; their beaks look too large for their heads, which they are, as when affected the beak grows and the head does not; then the chicks are very pale, hollow-eyed, do a great deal of chirping, and from weakness the ends of their wings hang low down; feathers and fluff usually have a ruffled appearance. Epsom salts should be given, as well as the powder. Percy A. Cook.

MATING BUFF ORPINGTONS.

THE matings of Buff Orpingtons for this season's yards is not a problem of a day or a week.

It is the labor of former years of the most careful development of a strain of birds whose blood lines properly nich for permanent perfect color and uniform size and type.

No real and permanent success can be ordinarily obtained by the mixing of many strains, even if the birds

S. C. R. I. RED.

First hen at Indianapolis and Dowagiac, 1909, and Jackson and Kalamazoo, 1910. Property of Valley Poultry Farm, Galesburg, Mich.

mated are all prize winners. The real foundation work takes years to build up, and proper mating is only the superstructure upon that foundation. Therefore these remarks are largely intended for those careful and competent breeders who have been patiently developing a good strain of birds whose blood lines, vigor, type, size, color and laying ability are known and tested.

My first rule is to set aside all birds with disqualifications under the Standard of Perfection.

My second rule is to make a careful study of my females and only keep the early laying pullets and the big, typey hens which continue to lay through two seasons.

The third rule I follow in rating is to cull out of my flock every bird, no matter how fine its fancy points may be, which is not possessed of abundant vigor.

Never under any circumstances breed a sickly bird or a weakling, or even a delicate one that has to be babied. Healthy, hustling, busy hens, the heavy laying kind, and big, strong, typey males are the only ones to use in special matings. Individual

weakness and disqualifications are transmitted, and if a weak male or female is used you are only breeding trouble into your flock, and it may take you many years in the future to eradicate it. In picking your breeders, therefore, look for health, strength and vigor in every bird of both sexes.

My next rule is to discard small, undersized birds, no matter how elegant their plumage. It is easier to breed small, sound colored birds than those of standard size and type. Most of the breeders of Buff Orpingtons have gone back a long way and lost Orpington size and type. This is the result of small birds in the matings, improper care in breeding, imperfect incubation, or brooding, the using of too many pullets or other causes. Small sized birds only keep a breeder down, and he deludes himself usually in hoping next year's chicks will come to standard size and type. In nine chances out of ten they will come small again as usual. Why not? Can you expect them to be different from their parents? No, the law of nature is "like begets like," and the Buff Orpington breeder must work under that law and not outside of it or contrary to it. If you want size and expect to get it with uniformity you must start to breed from birds that have size and correct type under normal conditions. By normal condition, I don't mean after a bird has been taken up and stuffed to put on weight, or when it is fitted for a show, but I mean in its natural state when laying. This means a big Orpington frame, good, big, stout bones and wide, long back with prominent breast. If a breeder hasn't vigorous stock in the first place and big standard weight birds in the second place he had better begin over again right away if he has to start with only three birds. If in reading this article you realize you have lost ground in the vigor, the size and the type of your flock, be honest with yourself and face the music today. Cut off your loss while it is small. Run to meet your coming failure by forestalling it and cull right down to the bone. The worst fooled man is the one who fools himself, the one who sees a wrong, a fault, or im-ending loss, and refuses to correct it. Don't be a sucker and stay in that class. In our experience we wasted our entire first and sec-

ond breeding years with Buffs. When we woke up finally we cut out every bird in the flock and began all over again from the bottom, with the result now that we have 13 prize males in our yards all up to or above standard weight except one, and 60 prize winning females, every one of which is up to or above standard weight, and we

11½ years later to keep on improving size and type in our flock.

Size and type are what designate the breed and it is color that distinguishes the variety; therefore size and type are more essential than color. In mating these rules laid down are the most important of all. In a score card

A bunch of 116 young White Wyandottes to be seen at the present time on the poultry farm of J. C. Fishel & Son, Hope, Ind.

believe the best flock of Buff Orpingtons in the United States today. It cost us many a sickening hour, the loss of many a dollar and a lot of courage to take the heroic action we did of cleaning out an entire flock, but it paid, and paid big. We now are breeding an imported cock, weighing 12 pounds and 13 ounces and a cockerel weighing

show you must of necessity have standard size if you expect to win. A cut of two points for one pound shortage in weight will put most any bird out of the running for the blue. Mr. Breeder, wake up to these rules if you want to succeed and don't go to sleep on your hopes and expectations.

Color is what most of the breeders

SINGLE AND ROSE COMB REDS

Pine Grove Poultry Farm Col. Wyandottes at Boston, '09

Won fourth and sixth cock, third and fourth hen, third cockerel, first and second pullet, silver cup for best display, special for best cock and four hens, special for best cockerel and four pullets, special for best shape female, special for best colored female, special for best pullet and special for best female. Twenty-five extra good cockerels for sale. Ten grand pens mated for the egg trade. Eggs for hatching, \$5, \$3 and \$2 per fifteen. Send for mating sheet.

William Hunt, Prop., Box R, North Middleboro, Mass.

CARTER'S BARRED ROCKS

Excelsior Strain

Carter's Excelsior Barred Rocks lead in the combination of show-room qualities and practical results. The males and females in my breeding pens this season will score 91-93½. They are mated to produce high-class exhibition birds. In selecting my breeders have chosen vigorous stock whose chicks will live and grow rapidly. For the egg trade I have four pens mated to produce Exhibition Pullets of the right color, shape and size. Also three pens mated to produce high-class Exhibition Cockerels. When desired, will divide and fill egg orders part from each mating. One sitting, \$4; two, \$7; three, \$9. A few choice cockerels for sale. Extra values at \$6 to \$15 each. Some cracker-jacks pullet bred.

T. J. Carter **Box Z** **Jonesdale, Wisconsin**

put 90 per cent of their time on. Color is only a secondary consideration, the first one being that you must start with an Orpington body, one radically different from a Plymouth Rock or Wyandotte. After you have the body then put on the feathers. There is a great diversion of opinion as to what Golden Buff color is. This question can easily be settled by breeders in the city at a small expense. I suggest the following example or test. Secure a small piece of polished copper, also one of polished brass, also of light gold, nearly pure of at least 14 karat fine. Take these three out into your pens and put them along side of a bird you think has the right color. Then, and not until then, will the ordinary breeder find out what golden buff means. Many inexperienced breeders who do not frequent the big shows prefer the polished copper color. It is too dark, or too strong. The polished brass, if of the proper foundry mixture, and the polished gold are the right color.

In order to get this light, exhibition, golden buff in chicks you must have it to start with in the parent birds. It is very hard to get light color out of

First prize R. C. R. I. Red cock at Omaha, 1909. Bred and owned by Anna M. Lembke, Griswold, Iowa.

dark birds. The rule we usually follow in our pens in mating for color is to match the back and wings of the female with the breast color of the male. Never forget that rule. It will save you years of time and develop for you many a prize winner. The promiscuous mating of dark and light birds only breeds confusion in color, mottled backs, red wing bows, shafting and edging of feathers. You will never get to the front until you learn that rule by heart and practice it year by year.

Another rule to remember is that size and type come from the female and color from the male. This rule is also a pretty safe one in general to follow. From this it follows that the male is half the pen and has a predominating influence in fixing the color. Therefore a good male bird is an absolute necessity to success. In comprehending this important fact, don't lose sight, however, of the female. She is the other half, and equally as important. Every chick can only have one mother, so she is as important to that chick as the male. In selecting a male of the proper color, never pick out one with positive white and black in the same bird. Either might be tolerated, but not both in the same bird. These

extremes of color are too hard to breed out of the chicks. In your special pens also be careful to avoid poor hackles, poor back and saddle color, poor tail color. Select birds evenly balanced. The next important section is the head. Select birds with large red eyes. The pearl or light eye is a most serious defect. Cut out those birds with bad eyes. They creep into your flock very easily and will soon ruin it unless extreme care is exercised. The comb is very important. Get a male with a good comb and eye. If his comb lops over or turns at the back, or is too high, mate him with females whose combs are low, straight and wide where they join onto the head. This will likely eliminate this defect to a large degree. In selecting birds for special matings, be sure and keep those with wide backs and saddles. Wide saddles form the foundation for a wide, low tail, usually well carried. Avoid the pinched tailed birds. Such usually carry them too high and breed males inclined to be squirrel tailed. Never use a male with a tail carried too high. Look out for the long legged males and pass them up. Keep a sharp eye out for those birds with the big, prominent, square breasts, wide bodies and short legs. Those are the kind to save. It is a general rule to supplement the weaknesses of the male by the extra strength of the female in whatever sections they show deficiency. Big legs usually go with big bone, frame and size. Match up your birds so that they equalize each other in all sections. The goal to be won is the development of the ideal bird. This ideal is like a composite ideal picture. We must take and breed the perfect points of one into the perfect points of another, and thus year by year build up toward perfection. In order to make any real progress to this ideal bird, one must know accurately the weak and strong points of his birds and so mate them as to breed out the weaknesses and intensify and perpetuate the sections already developed.

Proper mating is the cap stone to success in the show room. It is the rock which wrecks most breeding enterprises in fancy poultry. It is not very difficult to master if one mixes a little brains with common sense, with the ex-

perience of others who have preceded him, and with a critical, accurate knowledge of his own birds.

A trio of birds properly mated is worth 25 mixed up haphazard. In your efforts don't dwell too much on quantity. Your first endeavor should be for quality. Quality wins at the shows, quality brings prices from \$5 to \$500.

in your special pens only birds of the highest type. We only get to the front by being severe, exacting and almost heartless in culling out birds with minor defects. It pays. You can't succeed unless you practice it. Most any active, energetic person who likes chickens can succeed as a fancier if you start with good birds or eggs, bring the

S. C. WHITE ORPINGTON.

First prize cockerel at the late Cleveland show. One hundred dollars refused for him. Bred and owned by W. Etzensperger, Willoughby, Ohio.

Quality means profit and success. Quantity only means frequent trips to the butcher's shop and about the cost of production.

Most fanciers get into serious trouble by failing to cull close enough. Keep

chicks along to standard size and type and practice proper culling and mating. You are bound to succeed, to win your share of prizes and make money.

Martin's Regals

Are the Finest Type of Modern

WHITE WYANDOTTES

The leading judges have pronounced Regal type to be the proper type. Some of the most successful breeders of W. Wyandottes in the U. S. owe their success to foundation stock and eggs purchased from me. My winning of 21 out of 24 blue ribbons at the N. Y. State Fair, 1906-7-8-9, is a record that will probably never be equalled. My mating list for 1910 gives a complete description of my fifteen exhibition pens. They are headed by 1st prize winners at New York, Boston, Syracuse, Guelph and Toronto and contain all my exhibition females. Send for a copy of mating list; it is free. Price of eggs from these fifteen pens, \$5 per 15, \$9 per 30, \$12 per 45, \$24 per 100.

JOHN S. MARTIN

BOX 51, PORT DOVER, CANADA

CRITICAL COMMENTING, WISE AND OTHERWISE.

Dr. H. F. Ballard,

THE editor speaks of "The woeful lack of articles for the beginner on the varieties of fowls."

It seems to me that one of the most discouraging things the beginner sees is the long winded articles on big poultry plants around over the country. I do not remember ever to have seen an article for the amateur but what advised him to begin on a small scale. Then the next thing he sees is about six or eight double column pages on Mr. Up-to-Date's big plant that cost several thousand dollars. Now, Mr. Amateur, if he has the money, or can beg or borrow it somewhere, proceeds to try to begin to start to proceed to make a plant just like it in about three weeks. He falls down over himself, of course, and the chicken fever leaves him "never to return no more." There is not one person in ten thousand who has the time, money, brains and nerve to start and successfully carry on a ten thousand dollar nor even a one thou-

Poultry Books At a Cut Price

A complete list of poultry books that everyone interested in poultry should have. This list is made up with the idea of supplying the wants of all poultrymen, and covers about every phase of the industry; in fact this list of books make almost a complete poultry library, and by taking them all at the cut price you will be well equipped to make a success of this business. The books in this list tell you how to line breed, how to feed for egg production, how to reduce your feed bill, how to mate to produce exhibition birds, how to prevent and cure diseases, how to mix a balanced ration, how to build poultry houses, poultry appliances, etc. Following is the list:

	REGULAR PRICE

sand dollar poultry plant. Ninety-nine out of one hundred successful poultry men began on a small scale—less than one hundred dollars. Write to some of them and see if this is not so.

I wonder when the managers are going to let up on the size of the American Poultry Journal. "We chicken fellers" have to work overtime now to read one-half of it.

I was much amused at the answer given one of your correspondents in the question and answer department, where you say, "A 94 point pullet may be worth \$100 or she may be worth only \$5." It certainly shows the necessity of our judges getting together on the scoring business. A 94 point Buff Plymouth Rock pullet would be worth from \$10 to \$15, if I scored her myself; but I would not like to put a price on another judge's score; I should want to see the bird.

Just the same, Mrs. Scott's two White Wyandotte hens killed twenty-five chicks for me—not their own brood of course—and I had them now they would be worth \$75 to \$100. Cochin

hens right along on the same line of coops did not kill a chicken.

And to Mr. Zimmer I would say, where are we going to get the million dollars to do it with? I could do several things with \$900,000 which my present financial circumstances prevent.

The longer I live the more I am convinced that there is more "in the feed than in the breed." Long winded articles, written to prove that some up-to-date variety is a hundred per cent better than some old stand-by, is all lost on me. I believe I can take almost any variety in the standard and make either a layer or a setter out of it in a few years, according to the way it is fed and managed.

Mr. Percy W. Cook tells how to go to a good deal of trouble to make a spe-

fectly cold; she had flown out of a window five feet from the floor. A Cochon hen would never think of doing such a thing. No Rocks for me; nor Wyandottes either. Plenty of eggs and plenty of setting hens, that is what I have with my Cochins, and when a hen sets she attends strictly to business. When she is through I give all the chicks from two or three hens to one and break up the others in three days without any trouble at all.

Some people seem to have queer ways of attracting the attention of buyers in their advertisements. One begins, "Just What You Want." I begin to read and find that he is breeding a variety that I do not want, so I stop short off. Another says, "Here Is Your Chance, etc., etc." Reads too much like a patent medicine ad. Another starts out with, "I Want to Say to You." Well, why don't you say it? I

that there are so many things taken into consideration in making the price, both from the buyer's and seller's standpoint, that the amateur is liable to be considerably confused. One thing is certain, however, there are more \$5 to \$10 eggs advertised than ever before.

Tell your friends about the good things in American Poultry Journal. They will be interested and thank you.

cial coop to break up a setting hen. I can break up the most persistent Cochon setting hen that ever lived, inside of three days, in an ordinary exhibition coop, of which I always have a number piled around, by simply placing her in the coop with a vigorous young cockerel and give them both plenty of good nutritious food, and generally she will go to laying inside of ten days. If you breed Cochins and know how to manage them you need have no trouble in breaking them up. It is the Rocks and Wyandottes that make trouble as setters. I bought a little White Rock hen to set about twelve days ago. She set nicely for about ten days. I had her in the barn with about a dozen Cochon hens all setting splendidly. This morning when I went out to feed them I found Miss Rock out in the yard and her eggs per-

believe the best way to head an ad. is with the name of your variety or varieties, and that seems to be much the more common; because if you are not breeding the variety the buyer is looking for, he does not care for your ad. at all. Neither do I believe it is wise to say you are breeding the best variety that grows, because that is a matter of opinion. There are as many "best varieties" as there are breeders, and after a person has made up his mind, all the big blowing ads. in Christendom will not phase him. It is well to state in an ad. just what you have for sale, without any exaggeration, and that kind of an ad. will pay best in the long run.

I find it makes but little difference what price is put on eggs, the demand is about the same; which goes to prove

SUBSCRIPTION DEPARTMENT

A GOOD watch is the best asset a man can possess. Without accurate timepieces there would be no 18-hour Chicago to New York trains, nor similar achievements which require action at the proper time.

If you do not possess a good watch at the present time, we will give you one for sending us twenty three-year subscriptions or fifty one-year subscriptions to American Poultry Journal.

We do not ask you to send us the full subscription price of 50 cents for these subscriptions, but allow you to keep everything above 25 cents for every one-year subscription and all above 75 cents for every three-year subscription as your commission.

The Watch.

A 20-year guaranteed 7 jeweled gold watch is good enough for any man. The watches we offer are 20-year guaranteed 7 jeweled gentlemen's open face, handsomely designed and guaranteed to keep accurate time and please in every way.

Every subscriber can get one of these watches this month by utilizing his spare time and getting his neighbors to subscribe to The American Poultry Journal. Send us fifty one-year subscriptions and \$12.50 to pay for same at agent's price, or send us twenty three-year subscriptions and \$15 to pay for same at agent's price, or send us partly one-year and partly three-year subscriptions.

Besides getting this watch your subscriptions will also count on the grand prize contest which will close on June 10th, and you have therefore a chance to win one of these prizes besides the watch.

Read the full particulars of this contest on page 680-81 of this journal. You will not regret it.

Read what this man says and draw your own conclusions:

Rochester, Pa., March 24, 1910.
The American Poultry Journal Publishing Co.:

Gentlemen:—In answer to your letter of the 19th I can only say that I have no suitable photograph to send you. If I had one suitable for the purpose I would certainly send it, because you have done the fair thing with me in two ways. First, when I had won the prize, you rightfully awarded it to me, showing that you were not fakirs as most companies are, and second, you saw to it that I should get nice birds. When I started into the contest I hardly expected to win a prize, because I thought that you were probably a sham. I knew that I could not be beat out of my commission, so I started in with the object of getting a commission. But now my eyes have been opened and I see that you are a good, honest and reliable firm. The subscriptions were easily secured and before I could realize I had 164 counts.

And now about the birds. I received your letter stating that you had ordered them of Mr. Lester Tompkins on Friday. The next Wednesday they were at the express office, at my home town,

JONAS HAYNER, LIVINGSTON, N. Y.
A well known Barred Plymouth Rock breeder and exhibitor.

Rochester. I was delighted when I saw that they were so fine. After getting them home I examined them thoroughly; only to find that they were nicer in under than on the surface. They were red to the skin and had

R. J. KNISLEY, YORK, PA.
Breeder of S. C. Buff, White and Black Orpingtons.

typical shape. The cockerel had a pair of the nicest wings that I ever laid eyes on. Some of my many friends who came to see them asked how they were as laying fowls. I could honestly answer that they both began to lay

exactly one week after I received them, and lay they did, as regular as a clock. I am still busy entertaining friends from all around who came to see them. One would say they are better than those that took first prize at the poultry show; another would say they are fine, and thus I received compliments from all around. I could sell the eggs for good money easily, but money could not buy those eggs, as I want to raise all I can, so that I can fill orders next year. Hoping that I will be able to do more for the American Poultry Journal in the future, I remain,

Ira F. Bradford.

DOES POULTRY PAY?

This is a clipping from the Chicago Daily News April 7, 1910:

"Chickens sold at 19 cents per pound on the South Water street market today. This is the highest price ever recorded in the history of the trade. John Foley, manager of H. L. Brown & Co., 225 South Water street, said:

"The scarcity of chickens this year has been the talk of the trade. The only reason for the shortage of supplies that I can see is the high prices prevailing for eggs. Poultry raisers evidently think it is folly to market the producer, even at the high prices now prevailing, when they can receive better returns from the product. The high prices seem to have little effect in curtailing consumption. Buyers seem almost as eager to take hold at the 19-cent level as if prices were at their normal level—about 12 or 13 cents."

Since clipping the above price of live poultry on the Chicago market has advanced to 23 cents, which is almost double the price quoted one year ago.

R. C. BLACK MINORCAS.

No doubt there are a great many of our readers who are interested in Rose Comb Black Minorcas, and there would be a great many more if they only knew what a grand variety of fowl they are. They are grand layers of large white eggs, excellent table fowls, and one of the most beautiful plumaged birds we have in the black varieties.

Mr. Lloyd C. Mishler, North Manchester, Ind., has succeeded in breeding this variety to a very high state of perfection and is prepared to let you have the benefit of his years of labor at a very low price, as he is offering eggs from his best pens at one-half price. Write for his large catalogue and mention American Poultry Journal.

Why don't you send to the Pittsfield Poultry Farm, 102 Main street, Pittsfield, Me., for some of those Barred Rock day-old chicks and start right. They are selling them cheap and their stock is A No. 1. Look up their ad in this issue and send your order today. Mention American Poultry Journal.

Way Down East

**A Hurried Trip From Pennsylvania to a Few Prominent Eastern Breeders—
There is Always Something New and Something Doing in the East**

Written by H. P. Schwab, Eastern Representative American Poultry Journal, Irondequoit, N. Y.

Before leaving the vicinity of Philadelphia we followed our inclinations and again went for a call on Mr. Henry D. Riley, at Strafford, Pa., having been in that section for nearly two weeks, during which time Mr. Riley donated both his time and automobile to our desires, for which we were very grateful. In our March issue we wrote up Mr. Riley's Barred Plymouth Rocks, having been to his place early in February, and at our return at this time it was a treat to again go over this stock and to compare them with our former notes, also with his catalogue.

In Mr. Riley's matings we found much to ponder over; his birds were all at their very best at this time and we feel as if our former write-up did but scant justice to this line of birds. The first prize Buffalo cock, 1910, in full feather and of a strength and shade of color almost unapproached. This, with his grand size and beautiful shape and ideal head points, combine to make him one of the best. In pen No. 2 the first prize Philadelphia cockerel, 1910, held sway. Here was another of the very choicest in every way, a great winner and a great bird. Yard 3, headed by first prize Williamsport cockerel, and yard No. 4 by the second Buffalo cockerel, completed his cockerel matings in a fitting manner. Grand as these males are and strong as breeders, they are not all to be admired in these matings. The females here are also of a strength and quality to be commended. The very narrow, strong barring is to their credit, and Mr. Riley will certainly find results from each of these matings.

The Pullet Matings.

While many claim that Mr. Riley's real strength lies in his pullet line, still we point with pride to his famous winnings on males at some of our best shows. We do

not do this at the expense of the pullet matings, for in these we concede he is one of the very best. His four matings for pullets are of the best, even in quality, that is rarely found. Here shape and wings are the prevailing feature, closely followed by shade of color and style of barring. His first prize Buffalo hen is one of the grandest and she is closely followed by first Baltimore hen and the first and second pullet at Williamsport and several of his other winners, completing a collection of greatest worth.

Mr. Riley has issued a fine catalogue that will fully inform all of his quality and matings. But to those that can, we say, go to Strafford and see the birds yourself. Then tell us how feeble these efforts to properly describe them.

The Lakewood Farms Company.

We did not get to Lakewood, time forbidding, so contented ourselves by calling at their New York office. Here is found our old friend Mr. Harries in charge and into work up to his neck. Lakewood Farms S. C. White Leghorns and other products are favorably known the world over. This is one of the great plants of the country. Still, great as it is, their capacity is taxed all year 'round; orders for eggs for hatching and day old chicks come in bunches, and we can again look for an increase in this plant. Year after year their output has been doubled to try and keep up with the demand for their goods, and each year finds them unable to fill late orders promptly as they would like. We hope in the fall to inspect this plant and will then give our readers more of this plant as seen by us.

The Monmouth Poultry Farms.

At Freneau, Monmouth county, N. J., are located the Monmouth Poultry Farms, de-

voted to S. C. Buff Leghorns and S. C. White Leghorns. In the owner, Mr. J. Courtney Punderford, we found not only an interested fancier, but a man who as much, if not more than any other, has championed the Buff Leghorns and has made possible their wonderful qualities from both beauty and practical viewpoints.

Freneau is an old, old town, named after a noted French general whose patriotism and inclinations led him to join with Washington and in the cause for independence. From Mr. Punderford's poultry houses can be seen his former home, which was also donated to the cause and used as a hospital during the war. Here the sick and wounded of both armies lay side by side under this one roof. The blood was the same, only the cause different; but blood won out, and the friendship that has ever existed between America and England was undoubtedly begun and cemented there on these cots of suffering.

The Monmouth Poultry Farms are equipped in detail; splendid buildings, all clean and bright; incubator cellar with eleven 360-egg machines; a brooder-house a model in every way. Nothing seems lacking in these respects; even the climate and soil is particularly adapted for poultry.

Still, the main matter of interest is to be found in the poultry here, and in particular in the Buff Leghorns. Here are twenty-six pens mated, all with New York and Boston winners and their descendants. All of these deserve special mention and description, for a uniform buff color here prevails in every pen, and exceptional head points were the prevailing feature.

The Old Champion "Golden Boy First."

We first must mention "Golden Boy First," the unbeaten old champion with a record including New York of fifteen blue ribbons and eight championship cups; as a five-year-old he won fourth cock at Boston, 1910. This grand old bird retains his every great quality to a wonderful degree; his sound, clean buff color, with shape and size and beautiful finish, easily still stamp him one of the best. To him are mated the first Boston hen, as perfect a female as has been seen in years; she also won both color and shape specials; she with seven of her daughters are in this pen, making one of the choicest to be imagined, and we feel as-

An Old Piano Box and a Prairie State

UNIVERSAL HOVER

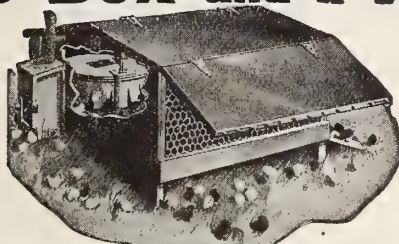

Will Solve Your Rearing Problem

You no doubt consider you are "lucky" if you raise half the chicks you hatch, don't you?

A great many don't do even that well. Hatching chicks is easy—but rearing them is the greatest "draw-back" of poultry raising.

The "10-day-death-loss" is like the thief in the night—it robs you of your profits.

If you could raise practically all the chicks you hatch, think of the jump your profits would take.

Home-Made Piano Box Brooder

We don't claim the Prairie State Universal Hover is a 100 per cent brooding device, but we can show you it is 100 per cent and more ahead of any other.

Some of our users even find it a 100 per cent brooder—raising every chick they put into it.

Here's one—read his letter:

Prairie State Incubator Co.

Gentlemen: I have used your Universal Hovers for over four years and have yet to find anything to equal them. I frequently raise every chick.

Yours truly,
EDW. N. BARKER

Boston, Mass.
You probably know or have heard of the popular secretary of the American Poultry Association, Mr. S. T. Campbell, of Mansfield, Ohio. This is what he wrote us Jan. 10, 1910:

"I have been using your Universal Hovers for several years with surpassing success. In mid-winter I put 90 chicks in a piano box with a Universal Hover fitted in, and raised 85 of them. I have never been able to equal that with hens or any other brooding device."

And so the good reports come in, indicating from practical experience that you can raise nearly every chick with this ideal hover, even in a dry goods or piano box. Now read this letter from Mr. Edward Corning, of Bound Brook, N. J., who, with his son, made \$12,000 last year.

"After trying your Universal

Hovers we have discarded all others, and intend to use them exclusively, as they give perfect satisfaction."

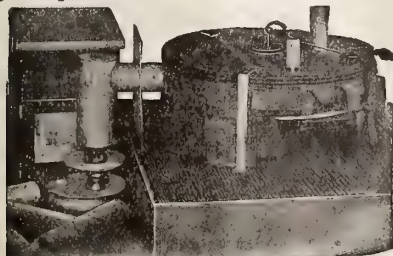

When the man who has made the greatest success ever made in the poultry business "discards all others," and uses Universal Hovers "exclusively," the "proof o' the pudding" is conclusive.

Let us mail you our catalog, fully describing this hover—tells how you can make the best brooder on earth out of an old piano box at very small cost. It also fully describes the Sand Tray Prairie Incubators, which hatch more "livable" chicks than any on the market. Find out how and why before you buy any other.

PRAIRIE STATE INCUBATOR CO.

Colony House with Universal Hover

Universal Hover Detached

sure that Mr. Punderford's hopes will be fully realized here in pen No. 5.

Pen No. 1 is headed by the first pen cockerel at New York, 1910. A wonder in quality, grand tail and properly spread and carried; the mates are the four hens in the winning pen and four of their sisters; all have neat combs, strong eyes and fine color, shape and size. It is the one even shade from head to tail.

Pen No. 2 contains the females of the first prize New York pen, 1909, headed by first

erel at Boston, 1910. Here, to our mind, is one of the grandest Buff Leghorn males we have ever seen. He has every quality; his wonderful breast is just right in sound color, free from shafting and frosty edging, and a model in type. The females here were also the pen winners and four others of same line, making a pen of rarest beauty and value.

The second Boston cock headed pen No. 4, while other pens were headed by New York and Boston winners. We could not

must admit that Mr. Punderford handed us a big surprise in having his entire flock meet these requirements. It but goes to show what our breeders are attempting, and when they succeed it is well for the world to know of it.

S. C. White Leghorns.

In the S. C. White Leghorns we found five pens mated. It is very evident Mr. Punderford is a Leghorn specialist, for here as well as in the Buffs type with size prevailed. The males heading these pens are all winners or bred from New York winners. Snow-white plumage was another feature noted, one we are always glad to see, as we know it is one of the hardest points to get just right.

In pen No. 2 was seen the third New York pen cock, 1909, a beauty in quality, grand size and snow white. Pen No. 1 is headed by one of his sons, a grand fellow, that should make a great show cock. The females were a superb lot of even quality. We failed to see where there was room for any doubt, and if we were to make predictions they would be that improved quality will again be bred here.

Day Old Chicks.

This has become a wonderful business. In particular can we say so when breeders with such quality stock as Mr. Punderford's enter into it. It is the demand of the times. The twentieth century mode of poultry traffic, its success is the best part of it, and the heatless brooder make all this possible. Mr. Punderford has been called to judge the Leghorns at several of our best shows. His writings have also interested us, and although we well know he is a very busy man, we hope to see more of it in the future. He has issued a very nice descriptive catalogue that is a real value to every Leghorn breeder and will mail it free to all interested. Please note his advertisement in this issue, and in writing mention the American Poultry Journal.

Metuchen Poultry Farm.

Mr. William A. Smith, Metuchen, N. J., breeds Minorcas of all kinds and varieties, that is, the Single and Rose Comb Blacks and Whites, with the old favorites, the Single Comb Blacks, a specialty for twelve years or more. Poultry is Mr. Smith's sole business. All his time is devoted to it, and from what we saw of this man, his place and stock, it is evident he has made a grand success with his Minorcas.

First prize Columbia Wyandotte pen, Cleveland, Ohio, 1910. Bred and owned by Ira Phillips, Oberlin, Ohio.

prize cockerel at Orange, N. J., of which Judge Drevestadt wrote—a beauty in color, very even, rich golden buff from head to tail, and extending to wings; sound under color, good in type and one of the best buffs we ever handled. The females are also of the same high grade, with fine texture combs, and are proven breeders of exceptional worth.

In pen No. 3 we find the first pen cock-

see where there were any seconds here. All seemed to be of the one grade, and that of the best. Other pens were headed by males sired by "Gold Boy First," and any bird, male or female, from this line is worth breeding.

This entire line, from first to last, greatly pleased us. To obtain the proper buff color and have it smooth and even, free from shafting, is an accomplishment, and we

Owen Farms' Eggs For Hatching

FROM
Buff Orpingtons
Black Orpingtons
White Orpingtons
White Wyandottes
Barred Plymouth Rocks
White Plymouth Rocks
Eggs for Hatching

This is the important matter before all of us from this time until the whole hatching season is over. Owen Farms has taken a departure this year and we feel that it should be explained fully, so that every one who runs may read and thoroughly understand what we are doing and why we are doing it.

In the first place, the writer has a large interest in the success of the poultry business in the United States, an uncommon desire to see it grow and prosper. Each one who writes Owen Farms, either for information, advice, price on stock or eggs, becomes to a certain extent an acquaintance of both Mr. Owen, the Proprietor, and Mr. Delano, the Manager, and we feel a personal interest in them. I have carefully gone over our business of the last few years and I have come to the following conclusion, that nineteen people out of twenty cannot afford to pay \$20 a sitting for the best eggs that Owen Farms can produce. Having \$20 pens, which we would allow the customers who could afford this price to en-

tirely monopolize to the entire exclusion of the other nineteen out of the twenty, seemed to us not to reflect and express that intimate, close interest which we have in each and every enthusiastic fancier.

No One Excluded From the Possibility of Growing the Best Birds of the Year

We therefore decided that we would list our pens just as we always have, describing the matings carefully and mating only our very best birds, limiting our mating considerably, and that we would have one uniform price, giving everybody a square deal and taking eggs from the pens in such a manner that every one who bought eggs of us should have the undoubted possibility and probability of raising some of the finest chicks of the year. To the man who could pay \$20 for a sitting this method does not work to his disadvantage as he might at first suppose. If, for instance, he was buying two sittings at \$20 a sitting he would pay us \$40 and get thirty eggs, according to our methods of last year. This year he may purchase of us for \$50 one hundred eggs and among that hundred eggs he would receive probably as many as thirty eggs from the matings that we have heretofore listed at \$20 per sitting. He gets, therefore, in addition to what he would have received last year great possibilities in the balance of the eggs, for I can assure each and every customer that we will not have a single mating that will not produce birds of remarkable quality.

We do not pose as philanthropists in this matter, but so long as the writer, Mr. Owen, lives and continues in the poultry business, the fair interest of our customers shall be our first consideration.

To state it clearly just what you can do with Owen Farms this year in eggs for hatching I would say that you may receive from any of our varieties:

Owen Farms Wm. Barry Owen, Prop. Box A, Vineyard Haven, Mass.
Maurice F. Delano, Mgr.

The show record of this strain is one of the best we have had to chronicle in some time. During the season of 1909-1910 fourteen exhibits were made at New York, Philadelphia, Chicago, Hagerstown, Baltimore, Indianapolis, etc., where something over 150 regular prizes were won, including sixty-two first prizes, five silver cups and many other specials. Here is a record to ponder over. We did not think such was possible with this variety that is always sure to meet strong competition.

Single Comb Black Minorcas.

On entering one of the poultry houses the first cock to greet us was the first prize winner at the 1910 New York Show. He also won first prize at Baltimore, 1910. Besides his wonderful color this bird has much to admire. His grand comb of just the proper size to conform, well rounded, medium length wattles and perfect lobes were grand to see. In size, carriage and form he is one of the very best. His ten mates are extra sized hens, with rather medium sized combs and of sound color throughout. Every one a winner, including first hens at Baltimore, Hagerstown and Indianapolis; first Chicago pullet, second and fifth Chicago hens, etc. This is truly a superb mating.

Close by was the Indianapolis, Ind., winner, a male of exceptional size and color. He also won second cock at Baltimore. His mates are 10 pullets, several of the noted winners, and others of equal worth. This pen looked extra good to us. Rare quality is the rule here and must be seen to be appreciated.

Next was the first prize cock bird at Indianapolis, one of size weighing now in breeding form over 10 pounds. In Pen No. 6 was the first prize pen cock at Baltimore, 1910. Both these males were of extra size, perfectly sound in color, with good heads and extra body shape. In going from pen to pen, we found the same quality and the same care in each that warrant the results obtained, there are no fillers in mating, each is made with a purpose "quality" in view and that well tells the success of this line in the past and promises much for the future. There are 18 pens of S. C. Black Minorcas all told.

In the R. C. Black Minorcas there are two matings headed by the first and third prize cockerels at Baltimore, both

of rare quality and mated to a selected lot of females, all up to weight and of clean, sound color.

White Minorcas.

In both the Single and Rose Comb are also bred here. There are five pens of the Single Combs, all headed by choice winning males with size and shape. In Pen 19 the first prize cock at Baltimore was lording it over 10 females, each a winner. The size and general condition of these birds pleased us, for such quality

Pine Top Poultry Farm.

At his New York office we again met Mr. John H. Hallock, owner of Pine Top Poultry Farm, Hartwood, Sullivan County, New York. We were at this farm a year ago and wrote them up in the April, 1909, issue, but time at this time forbid our going there which we more than any other regret.

Pine Top has met all our expectations. Their improvement has been simply wonderful. For years they have kept fully

A prize-winning Mottled Ancora. Bred and owned by Williard J. Thorniley, Route 1, Marietta, Ohio.

is extremely rare and hard to find in White Minorcas.

This plant is also well arranged and nicely kept, more buildings are being put up and the tone of general prosperity is evident everywhere. Mr. Smith will be pleased to mail his catalogue to all readers of the American Poultry Journal if you mention the paper.

abreast of the pace, and each year they make a spurt and clean things up in proper fashion. This year this happened at Boston. Last fall, September, 1909, it was at the Tri-State Fair, Memphis, Tenn., when the clean-up took place. Last winter it was at Philadelphia, and the year before at Chicago. Now, where will it be next? Their country-wide rec-

Owen Farms' Eggs For Hatching

10 Eggs for.....\$ 7.50	14 Eggs for..... 10.50
11 Eggs for..... 8.25	15 Eggs for..... 11.25
12 Eggs for..... 9.00	50 Eggs for 60c each, or. 30.00
13 Eggs for..... 9.75	100 Eggs for 50c each, or. 50.00

Every egg will be marked with the number of the pen and the variety from which it is taken, and by comparing it carefully with our mating list you will see just what you are getting, and that we shall give the same satisfaction in results that we have heretofore we are positive, for already we are hatching from our eggs with great satisfaction as to fertility and hatch.

We guarantee three eggs out of four to be fertile, and where the number is an odd number and cannot be divided by four we shall give our customers the benefit of the extra egg.

We advise early booking of orders, for this allows shipment to be made at the time you wish them, and in some of our varieties particularly the number of the pens to be mated is somewhat limited and you are likely to be disappointed if you put off your orders too long.

We shall continue to pack them with the extreme care that we have used heretofore and can assure our customers that they can order eggs fearlessly from any point in this country or Canada, as our reports have been extremely favorable from eggs shipped to the extreme North and South and to the extreme West.

Express Charges on All Original Orders for Eggs for Hatching Prepaid to Points in the United States or Canada

This is not the first time that Owen Farms has proposed something which is an innovation. Among other things they were the first to introduce to the poultry world stock guaranteed to win at any show in America.

In adopting this very broad proposition for the benefit of their

customers they are acting with care and a knowledge of just what it means, both to themselves and to their customers, and they have no hesitation in doing it. As almost every one well knows, express rates can be made better if made at the point of shipment, and particularly when paid in advance. We know how much the express will cost us; you do not know how much the express will cost you. We believe that this step that we are taking is the greatest step that was ever taken in the poultry world for the protection and benefit of the customers of any one particular farm.

Mating List

Our mating list for 1910 is all ready and is yours for the asking. Our matings are as carefully described as in years gone by, and that you ought to receive one whether you purchase eggs of us or not I confidently believe. A postal card naming the variety you are interested in will bring it with the least possible delay. Do you not owe it to yourself to carefully read our mating list before you buy eggs this year?

Breeding Stock

We can now give you a wonderfully good lot of young birds that have come on and developed since our showing at New York and Boston. Just at this time we are in a splendid position to furnish our customers with really wonderful quality in males and mated trios and pens for breeding purposes. Our matings are made and we will sell any bird on our place not included in these matings. This year we are selling eggs for hatching only at one price, those from our best pens; which have been reduced in numbers. Consequently, we have more first-class birds to sell than ever before at this time of year. If you need a grand male bird to head your finest pen or if you wish to start in one of our varieties with a trio or pen mated for the best possible results and having the best blood lines in the world, write and ask us what we can do for you. We cannot tell you what we have unless we hear from you and know that you want to hear from us.

for circular describing the new Roanoke Power Washing Machine, "a laundry in itself." Agents wanted, **Altorfer Bros., 15 Main St., Roanoke, Ill.**

KEEP CHICKS GROWING BY USING

Saves time, labor, litter and feed. For more information, address **W. M. Conner, Jersey City, N. J.**

CHAMPION BROODERS

Our 1910 model is the best and finest brooding device ever put on the market. Outdoor, indoor and lampless brooder, weaning coop and small colony house, all combined in one machine for less money than you pay for just "brooder" in other makes. The Champion is the standard Brooder of the world. We have customers using as many as 50 on their farms. No other brooder like it.

Champion Patents

Many manufacturers are using some of our patented devices in their brooders. Beware of these infringements as we intend to prosecute all such manufacturers and users of infringing brooders. Our patents cover all two compartment brooders, others are infringements, and if you buy them you are liable to heavy damages.

How They Work

"I have used two other kinds, but yours beats them all."—**Jos. McCloskey, Watseka, Ill.** "My Champion raised 145 chicks for me without the loss of one."—**E. U. Harris, Hagerstown, Md.** "Never had a chick sick with weak legs or bowel trouble in the Champion."—**Nick Morris, Goshen, Ind.** "I raised 600 chicks in two Champions last year and lost only three chicks."—**R. Roberts, Boston, Mass.** "My Champion chicks grow like weeds. Keep the brooders outdoors all winter."—**Jas. Shiner, Augusta, Me.** We have hundreds of others on file.

The Champion is the only brooder which will work outdoors in winter without shelter. The powerful heater does it. Uses one-half the oil others use. Don't buy until you get our catalog; it's free.

ord for some years back is well known, and where known is most favorably known.

Mr. Hallock has in Pine Top Farm one of the prettiest places we have ever seen, and we can imagine his hurried steps to reach it as often as business permits. The quality of Barred Rocks and S. C. White Leghorns bred there can be seen by their winnings. They are of the best and hold the best of reputations. We hope to again visit them, probably this fall (if we get another invite), and will then give our readers more of this place.

"Welleslea" the Home of "Fluffy-Ruffles."

From New York City you take train to Bridgeport, Conn. (where the circus comes from), then trolley to Stratford, Conn., and you will land in the home town of one of America's best known breeders and judges, Charles H. Welles. We presume everybody has heard of "Fluffy-Ruffles," so also presume you all know of her breeder and owner, if not, listen—

"Fluffy Ruffles."

We very much doubt if ever a Barred Plymouth Rock shown before or since has

First prize Columbian Wyandotte pullet at Cleveland, Ohio, 1910. Bred and owned by Ira Phillips, Oberlin, Ohio.

attracted the attention this hen did. Winning at Madison Square Garden, New York, three years ago fourth pullet and color special female and twice since then at the same show winning first prizes and championship female, complete a record that is simply unapproachable. Back of all this is a quality to be reckoned with, and we do say that no question was ever made of honors she won.

Besides the winnings of this now famous hen, Mr. Welles has a New York show record that has held him up with the best for close to 20 years, he has been a persistent exhibitor year after year, and has been "in it" solid all this time. The trophies of many a hard fought show are now kept here, the one most interesting to us was the large bronze vase offered by the Japanese government at New York three years ago and won by Mr. Welles with his first prize exhibition pen, it is a work of art whose value can not be estimated.

The Cockerel Matings.

We found Mr. Welles busy as usual, for business is always good at Welleslea, all work was put aside and an inspection of his yards was made. We believe that many of the breeders underrated Mr. Welles' cockerel matings. Here is a line of males that have been consistent New York winners, look up his record on pen and male winnings and you will find much in this to talk about.

The first pen seen was headed by the third cockerel at New York, 1910, a bird of rare type and style, very narrow barred, and simply grand under. This bird has even improved since the New York show and today is superior in every

PLYMOUTH ROCK SQUAB CO. 188 Howard Street Melrose, Mass.

way. The next pen also contains a brother, a cockerel never shown and one that bids fair, barring accident, to make a great show cock. Both these matings as well as three others seen were of the very best. The females were all of extra shape, good size and strong, even barring, good eyes and head points. The males of this line have in particular one feature we like to note and commend, well spread, full and properly carried tails. These matings looked extra good to us. They have been made with care and results are bound to follow.

The Pullet Matings.

Here is where we can well afford to take hats off to Charlie Welles. These matings are so grand, and their system so very simple, that we could but stand and wonder at all. The first pen seen contained the ten best "Fluffy Ruffles" pullets bred in 1909 and mated to a cock sired by the sire of Fluffy. The next pen had her ten best daughters of 1908 mated to a cockerel sired by her son and bred from his third New York hen. Another pen had eight of her daughters, two years old, mated to a cockerel bred similar to above. Then there were three matings that on the female side line back to the third New York hen and are now being bred to Fluffy Ruffles males. Here is line breeding that can be called the double-cross. The male blood is the one and same, but two different females are used that are half related (on sire-side). We can not imagine of a better

First prize R. C. R. I. Red pullet at Omaha, 1908. Bred and owned by Anna M. Lembke, Griswold, Iowa.

combination. For four years now this line has produced results second to none other. This year at New York Mr. Welles again won first prize pullet with a bird bred by a daughter of Fluffy mated to a son of third prize New York hen, and he sired by a son of Fluffy. This well shows what this combination can do and in our opinion we confidently expect it will do a great deal more.

There were four other matings here made along the same lines and with but one or two exceptions all date to the same two females. The third New York hen referred to was placed at New York, January, 1908, the same and first time Fluffy was shown as a hen. She stood up close, her contrast of color and style of barring was prominent, and she has well proven her value as a wonderful breeder.

At the late Buffalo, N. Y., show Mr. Wells was reelected president of the American Plymouth Rock Club. His efforts for the breed and breeders have been met and appreciated and the success he has attained is most fully deserved.

Mr. Harlo J. Fiske.

At Sterlington, Rockland County, New York, are the Skylands Farms, comprising something over 2,000 acres, and of which Mr. H. J. Fiske is the manager. Here are bred R. C. Rhode Island Reds and S. G. White Leghorns. This farm is well named, it lays up in the hills 1,500

Amatite ROOFING

A Frank Statement

HOW many manufacturers of ready roofing will tell you frankly how their goods are made?

Mighty few.

They will talk about "secret formulas," "special waterproofing compounds," etc.—all nonsense.

They don't tell you what the goods are made of because they don't dare.

From the start we have never hesitated to tell the buying public just what Amatite is made of and just what it will do.

How Amatite is Made

Amatite is made of two layers of Coal Tar Pitch—the greatest waterproofing material known.

Alternating with these two layers of pitch are two layers of coal-tar-saturated felt to give it tensile strength.

On top of these four layers is a real mineral surface—five layers of protection.

The mineral surface is permanent, fire-proof, and absolutely requires no painting.

It Needs No Painting

Roofings that require painting are a worry and an expense. Every year or two you have to climb up and give them a coating with some special compound sold by the manufacturers, or you are pretty sure to have a leaky roof.

Amatite is Making Good

We are constantly receiving letters from customers telling us how satisfied they are with Amatite—how much better it is than the old-fashioned roofing.

Year after year, in all weather, Amatite will give perfect service without any painting or attention of any kind.

Surely this is the kind of service that wins and keeps customers.

Free Sample

Before you go to your dealer and buy a roofing, we should be very glad to send you a sample, so that you can see for yourself just what we are talking about—what a solid, substantial, reliable roofing we are offering to the public.

Something Back of It

Remember, in this connection, that Amatite is made by the largest manufacturers of roofing materials in the world, and that when you buy this roofing there is something behind it. We stand back of every roll. We know we are offering the best and the most economical ready roofing on the market.

For the sample and booklet address our nearest office.

Spaugh's Result II. 1st cockerel Springfield and Indiana State Fairs, 1909.

EGGS AT HALF PRICE

After May 15th I will sell eggs from my best matings at one-half price, \$2.50 per 15, from my

Bar'd Plymouth Rocks That Have a Record Behind Them

My system of mating produces prize winners. Every pen is mated with this object in view. Send for my mating list. My Plymouth Rocks fit the Standard.

Am making a special price on a few extra good cockerels. Just the thing for improving your flock. Write quick.

My New Barred Rock Booklet

Now ready. It gives you much valuable information on Barred Rocks. It is handsomely illustrated and I only ask you to send one dime to help pay cost of same. Send for it today.

**C. E. SPAUGH
BOX T -:- RUGBY, INDIANA**

feet above sea level, which should bring it up close to the sky.

The colony house plan holds favor here, and well it may, with unlimited range at hand for the chicks to roam. I do wish that every reader could visit Skylands and see it as I saw it, on a beautiful day. Can the reader imagine here and there a pen of the highest quality of S. C. White Leghorns roaming at will on the unbroken lands, with the dead leaves for a background? What a contrast they make with their snowy white plumage and red combs, and as you approach they hold up their heads and sing a warning not to intrude. Stand still and you will see them busy again, contented and happy with their lot.

We have written of this line before, and in particular in connection with the late Buffalo show. For it was there that Mr. Fiske made his latest record and one that will stand as the show record for some years to come. The S. C. White Leghorns were the largest class at this show and contained nearly 200 birds. In this class Mr. Fiske won every first prize offered and others for good measure as follows: First, third and fifth cock; first, third and fifth hen; first, second, third, fourth and fifth cockerel; first and second pullet, and first pen, with all specials. His clean sweep on cockerels was a stunner and the entire record won on merit alone. Knowing of this we expected to see a grand collection of stock here and were primed for all.

Pen No. 3 is headed by the first Buffalo cockerel, a bird of rare beauty, great size,

**A NEW YORK WINNER
Bred & Owned By
JONAS HAYNER LIVINGSTON, N.Y.**

typical and as white as can be; his tail in fullness and carriage is ideal, head and comb extra. Here are also some of his grandest females, every one a winner and bird of best possible grade.

Pen No. 6. The male here more than satisfied us, and he undoubtedly is one of the best living that we have seen. His size, with shape and head points are hard to equal. He has every desired quality that goes to make a superb Leghorn. His eight mates are all sisters to Pen No. 3 male, with small combs, good sized bodies and extra full and well carried tails. The shape of backs was all that could be desired.

The other matings were close up, quality the rule for that and not quantity is the desired result looked for here. Next to type and condition the snow white plumage were the attractive features, these with good strong red eyes and fine yellow legs only make possible such records as given above.

Of the R. C. Rhode Island Reds we saw three matings. Here also it was simply a question of merit, each pen is headed by a show winner and contains from eight to ten females. Pen No. 1 contains the third cock at Boston, 1909, a grand fellow and proven breeder. Pen No. 2 has the second Boston, hen, 1909, and fifth at New York, 1910. The cockerel winning third at the Paterson, N. J., show.

The size and shape of these Reds, as well as their color were a feature. The combs small, and, on the males in particular, we thought of very high value. Mr. Fiske has issued a very neat circular describing his matings, that is mailed to all interested. He is a fancier who has made a success that I am sure is well deserved. He unquestionably has the goods and confidence in his future efforts.

Young's S. C. White Leghorns.

At Monroe, N. Y., and up among the hills known as the highlands, is the home and the poultry plant of D. W. Young, the man that has made the going in Single Comb White Leghorns at New York for several years.

We can hardly imagine a more desirable place for both a home and poultry breeding. The sun always shines there, both in and outside. Mr. Young's work has been very successful to say the least, and the well earned prosperity has arrived, bringing with it the sunshine of contentment and happiness of work well done.

In Mr. Young we find one of the most energetic breeders we have ever met, the work he has done with the wonderful records made would completely satisfy most men, and they would be contented to rest and reap the harvests bound to come to them. Not so with Mr. Young, his nature rebels at such thoughts, he is up and doing every minute, just as if there were more shows to conquer and still better records to make. All may be probable, but is it possible?

The new poultry houses are models in every detail. The large house is 362 feet long and 12 feet wide, having 30 pens, each 12x12 feet. The dropping boards have sand on them and are cleaned daily, the entrances for the birds are 3 feet wide and 2 feet high, this prevents a rush or crowding. The dry mash is fed here in self feeding hoppers that are opened at feeding times and kept closed the rest, each pen has a very large park runway with a heavy sod that affords plenty of green food and ample room.

The colony houses and brood coops all have their features, and all seem of just the right kind for successful poultry breeding, nothing is overlooked, for there is even a special root cellar where mangles and cabbage can be kept year round and in the best of shape. These details interested us, still at our every opportunity our eyes stole glances at the birds penned around us, and as we presume

the reader is also anxious to see this flock as it appeared to us, we will now pass all other over and mention some of the matings, trusting we can find words that will describe this wonderful flock properly.

Edward I. 12 Years' Old.

Of all the Leghorns the world over, we

that have brought success to this line. In shape he is a model with extra size, his comb nearly perfection and his tail full, well covered and carried just right, well back. He still holds the same pure white color, age has not dimmed him a particle, and even at this time we consider him one of the grandest specimens living.

Edw. Chambers' Buff Orpingtons always in the lead. Look up my ad in this issue.

doubt if there is one better known or of greater value than this noble old fellow, he is the real foundation of this modern down to date line, he has well earned his pension, and still in his extreme age he retains the qualities most desirable and

Here the breeding pens run in rotation as given in Mr. Young's catalogue. In pen No. 1 we find Edward XII., first prize cockerel at New York, 1907, and the winner of special for best Leghorn at the show. His winnings and those of his get

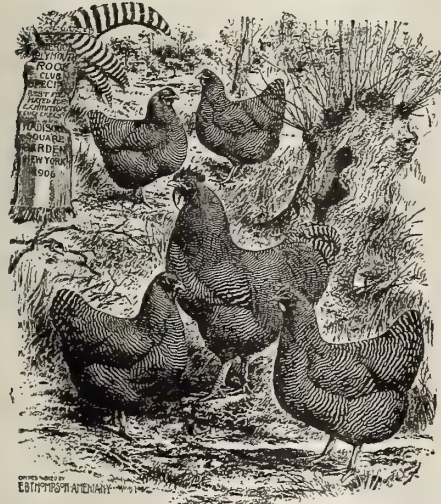

Fashion's Proudest Birds are "Ringlets"

E. B. Thompson's Barred Rocks

are identical to success in Barred Rock breeding; they combine all the great qualities of size, style, shape, heads, barring and color which have made the "Ringlets" America's leading strain.

Their conquest of Madison Square Garden, New York, for more than 20 years is familiar to every Barred Rock fancier throughout the civilized world. The record stands alone and puts all others in eclipse---it is the most remarkable in the annals of poultry shows.

My producing the beautiful "Ringlet" feathers on Barred Rocks is recognized as having passed far beyond the realm of experimental theory. I never had so many superior exhibition and breeding birds---both male and female---with which to supply my customers all over the world as now, and all fanciers who visit my farm declare the stock is a revelation in the science of Barred Rock breeding. I can furnish you any birds you may want at reasonable prices and will assure exceptional value. Will mate to produce winners if desired.

Winners of Special Prize for Best Pen mated to produce Exhibition Cockerels, at Madison Square Garden, New York.

The "Ringlets" are known in every land and play their part in the commerce of the world

"Ringlet" Eggs Are The Best That Money Can Buy; They Produce Prize Winners

Mr. E. B. Thompson

Dover, Ark., October 18, 1909.

Dear Sir:—Thinking it would be of some pleasure to you to know of my winnings on your "Ringlets" at our show, I will state that I won first prize on cock, hen, cockerel and pullet, and special for best cock, any variety, and special prize for best hen, any variety, in the show. The "Ringlets" win wherever shown. This was my first exhibit and my birds were the sensation of the show. Yours truly, W. J. Brown, M. D.

My matings for eggs are the world's finest, and prices are as usual: One setting, \$6; two settings, \$11; three settings, \$15; four settings, \$18; 100 eggs, \$30. New 58-page catalogue, full of pictures of New York winners from life, will be mailed upon application.

is far too long for us to give here, and for all such information we would refer you to Mr. Young's catalogue, which is mailed free to all interested. This cock in perfect condition and with every quality is a picture to see, his mates are in a class by themselves, with shape, size and the positive pure white color that is a characteristic of this line. All females here weigh over 5 pounds, are uniform and completing a most rare and desirable pen. To our mind pen No. 2 with Ed-

but 60 of his eggs and from them bred the first, second, third, fourth and sixth cockerels at the 1910 New York show, and also the fourth pullet. Four of his mates are New York winners and the others of the same high grade with known breeding value in each.

Edward XX., the first prize cock at the 1910 New York show, heads pen No. 3. His size with perfect type stamp him one of the best, and he has superior head points. The females here are an-

and well set. It is these qualities that have won for this line year after year at Madison Square Garden, New York, and it is these same qualities appearing yearly in improved form that will have to be reckoned with in the future. Mr. Young's New York show record reads much like a fairy tale and its possibility can only be believed after seeing his stock.

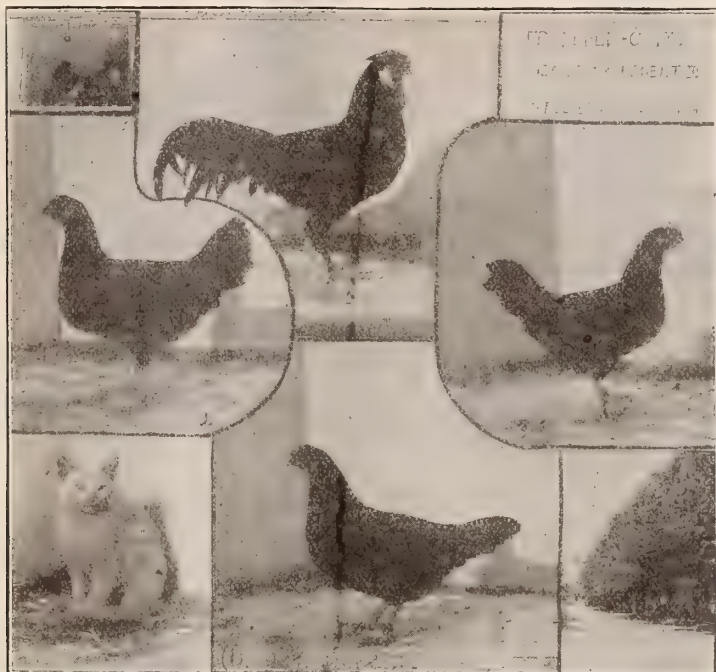

Yard No. 4 was another to our special liking as it contains the 1910 New York winning cockerel. Yard No. 5 has the first cock at same show 1906, and yard No. 6 the winning New York cock of 1909, and so on down to yard No. 24, everyone of which is headed by a New York or Boston winner, completing a collection of matings all made with the greatest care and of special worth to the breeders. We found in our conversation with Mr. Young that every mating has its special purpose to fill, and we can freely give our opinion that these aims will be realized. The foundation of all this is continued improvement and to find cause for this here requires the deepest study to see where this can even be possible.

Our time here was somewhat limited, still with Mr. Young in charge we had ample opportunity to see and to discuss all these matings, here are seven New York first prize winners and as many of second and third winners heading pens. Of the females the same can be said, for this line has won as many places on females at New York as it has on males, and these matings have been made year after year right down to this time. If more can be said of the value of this line and stock, we want to be told of it. When we turned to leave, it was with a regret that time only has revealed to us, the general attractiveness of the Leghorn bred in this quality is truly surpassing. Mr. Young and the world know of the success this line has made. But do either fully realize its true value to poultrydom? We doubt it.

Grove Hill Poultry Yards.

We again made a hurried trip to the far east, just to see what a few of the Barred Rock breeders were doing. Having spent some five weeks mostly among the Leghorn men, our desire called out for some Plymouth Rocks, and we well knew where to go for them. Arriving at Waltham, Mass., we beat hasty steps for the Grove Hill Yards, where we found Superintendent A. C. Smith and with him made the rounds of this great plant.

The success of the Grove Hill line of Barred Plymouth Rocks and S. C. Brown Leghorns have been pretty well told in the show reports, and in particular this spring we have chronicled again their grand win at the 1910 New York show on both varieties. They have been making records at Grove Hill for several years. Still we doubt

Rose Comb Black Minorcas as bred by Lloyd C. Mishler, North Manchester, Ind.

ward XIX. formed a pen whose real value is beyond estimate. This male won first cockerel and all specials at the 1909 New York show, he has wonderful size and stands well up on a pair of strong pure yellow-colored legs, he carries a well spread tail, very low, and has an extra full and long saddle. His value as a breeder can best be seen in Mr. Young's statement that last year he set

other collection of wonder, extra heads, and with form and color of the best.

This entire line of Leghorns have characteristics of their own. These characteristics embody all that is desirable in this variety and we would first mention shape and size, pure snow white color, long full tails well covered and carried well back, and suprisingly fine head points, the combs are low, well serrated

Rudy's Perfection White Wyandottes

Just from Missouri, where we did show them sure enough. Now I am going to show you the quality of my "Perfection" Strain that can be found in my breeding yards this season. My type of White Wyandottes is known all over the world as being as near Perfection as has ever been produced, and winners in most any of the best shows can be traced to my

"Perfection" Breeding

My records, at Chicago, December, 1908; Peoria, Ill., November, 1908, and Kansas City, Mo., January, 1910—the Madison Square of the West—will long stand unequaled. At these shows (the last three shown in competition) they won all the Blue Ribbons—15 out of a possible 15. At Chicago: 1st, 3rd, 4th cock; 1st, 4th, 5th hen; 1st, 2nd, 4th cockerel; 1st, 2nd, 5th pullet; 1st, 2nd pen. Silver cups and specials for best display. At Peoria: 1st, 2nd, 3rd, 4th, 5th cock; 1st, 2nd, 3rd, 4th, 5th hen; 1st, 4th cockerel; 1st, 2nd, 3rd, 4th pullet; 1st, 2nd, 3rd pen. All specials, including President's \$50 silver trophy cup for best display, all varieties competing. At Kansas City, 1st, 2nd, 3rd, 4th cock; 1st, 2nd, 3rd, 4th hen; 1st, 2nd, 3rd, 5th cockerel; 1st, 2nd, 4th, 5th pullet; 1st, 4th pen. Specials: The Weekly Kansas City Star's \$150 silver trophy cup for best bird in the show, all varieties competing. The Schmelzer Arms Company's \$50 silver trophy cup for best display, all varieties competing. All the above prize winners (with one exception) can be seen in my breeding yards this season, as I wish to give my patrons good value in

Eggs For Hatching : After May 20th Eggs From All Pens, Except A and B, Half Price

Fifteen grand pens. Mated for the Egg Trade, including all my prize winners. Eight of them headed by the best sons of "Perfection," the greatest living White Wyandotte sire. Prices of eggs: As they run (i. e., eggs from all pens), \$5 per 15; \$9 per 30; \$12 per 45; \$24 per 100. From pens of your own selection, \$10 per 15; \$18 per 30; \$25 per 45. Utility and incubator eggs (from surplus stock I carry over for next season), \$3 per 15; \$5 per 30; \$7 per 45; \$12 per 100.

Don't forget that my "PERFECTION" STRAIN is noted for Great Egg Production. Write for Free Egg Circular and Mating List. A few choice breeders yet for sale. Prices on application.

Rudydale Poultry Farm ∴ ∴ **Box A, Mattoon, Illinois**
Geo. H. Rudy, Prop. and Mgr. **The Home of "Perfection" White Wyandottes**

if ever one of more value than their late one has been made. With this we fully consider the competition and that they have won three world's championships during the last four years. In this the value of a line can well be seen, and if we consider further—taking their champion Crusader III, winner of first cockerel and champion male at New York, 1907. He sired the first cock at the 1910 New York Show and is grand-sire of the champion male at same show, 1910; also sire of three other champions and gold medal winners in one season, then the true worth of a line is best seen and understood.

Crusader III, Jr., the first prize cock and shape special male at New York, 1910, faced us in one of the first pens seen, and next to him stood his running mate, the first prize cockerel at the same show. Here was the opportunity to see and to study two of the best Barred Rock males it has been our privilege to handle. With our report of the New York show fresh in mind as regards these birds, we could not help but think how really inadequate words are in describing such quality for our readers. We can well tell of birds being narrow and well barred, with fine shape and head points, and describe in detail the value of each part or section, but how many can from such descriptions see the bird as he really is, with all these sections of merit combined, making the bird of just the proper shade and of the best seen merit all in one. Here is where words fail, and the specimens must be seen to be appreciated at their true worth.

Mated to these males are hens and pullets that bid fair for future results in this line. They have been selected with the greatest care. There are no side lights or fillers here. Individual merit prevails as well as collective merit, and they make as desirable pens as can well be imagined.

Yard No. 35, as well as yard No. 33, attracted our attention. Both are headed by New York winners, and both pens show the same care in mating that is evident here from first to last. The very narrow barring and extra clean and bright color of these males was very noticeable, while the females were of the quality mentioned in the other pens.

Yards No. 37 and 41 were also headed by New York winners, as were others down the line, making a collection of quality rarely seen, and one that must be seen to be fully appreciated.

The Pullet Matings.

For several years now Grove Hill has

First young Indian Runner drake, New York, 1909-10. Also special for best Indian Runner in the show. Royal Farms, Little Silver, N. J.

won well with its female line, and their matings in this line looked extra strong to us. They have combined in size and shape a quality that is particularly pleasing. This

is evident in both the females and the pullet-bred males; the long backs, free from cushions, and well-shaped tails are good to see, and we are free to state that they have improved this line fully 25 per cent in the last year. Of their seven matings in this line, all deserve special mention, but it troubles us how to give it, as they are alike as can be and by telling the story of one all are included.

In yard No. 47 we found the females that were in their third New York pen, 1910, and four others of the same breeding. These females, to our mind, have not only the proper shade of color, but have the barring as well and very neat head points. In yard 49 was a cockerel bred from their second New York pullet, 1909. This female in shade of color and sharp barring was a wonder, and it is most reasonable to expect results for this line.

The S. C. Brown Leghorns.

For a great many years the Grove Hill S. C. Brown Leghorns have led the world at New York and other shows, including three world's fairs. Their matings in these were rich in every quality, besides the grand head points, the striping of hackles and saddles were the feature; this with the even shade of color in neck, back and saddle of the males along with sound breasts make their record possible.

The females seen here were particularly free from all shafting, and in head points were all that could be desired. The S. C. Brown Leghorn female is a bird of rare beauty at their best and when seen as they are here are only the more admired. They are mated for both cockerel and pullet breeding, with the distinctive features plainly to be seen.

The Grove Hill Poultry Yards are well located in a beautiful section close to Boston. The pens are large and the yards of extra size. In mating here every care is used to have this properly done; it is only a question of quality; quantity is never considered. In Superintendent Smith Mr. Bright has one well qualified to produce the required improvement each year, and if we stop to consider what this line has done for the past fifteen or more years in the show room and in competition with the best, it

Kline's White Wyandottes

1st Cock, Indianapolis, 1909

Won at Pittsburg, 1st and 2d cock, 3d cockerel and 1st pullet, silver cup for best pullet. Winning cock and pullet were sensations and only exhibitor won 2 1sts. Grandest victory ever achieved in such hot competition. I have produced winners for 18 years. Grandest matings ever put together which will produce more winners for years to come. Every bird mated is guaranteed a typical specimen while those in best pens aside from their superior laying qualities are fit for keenest competition. My pens contain Pittsburg, Boston, Ontario, Chicago, Indianapolis and other noted winners, and still better, birds that have produced these winners. I know you want to breed the best and I can furnish eggs that will produce winning quality at \$5 per 15. Customers already reporting 80 and 90 per cent hatches. My sales are made "on honor", therefore buy from a breeder who serves you right. Illustrated circular free showing my winners.

Geo. M. Kline, Box 64, Downers Grove, Ill.

is then that we can better understand their accomplishments, which have been the foundation of their great success for these many years.

In Mr. Bright is also found a dyed-in-the-wool fancier. He well knows all the ifs and and's of the business. Poultry is his hobby and his personal interest in his birds is second only to his knowledge of their worth.

"Ringlet" Barred Plymouth Rocks.

No trip is just complete without a visit to E. B. Thompson, at Amenia, N. Y., where the "Ringlets" roam at home. We have written of this line before and so have hundreds of others, and this with Mr. Thompson's advertising has introduced him and his birds pretty well, so that but little of this needs reference here. The same may well be said of his show record; he only exhibits at New York and for many years he has been a consistent exhibitor at this great show, making a record there year after year that is as stable as it is convincing proof of "Ringlet" quality.

As stated, we have been there before and partly knew what to expect. We have at former times feasted our eyes on several particular birds, and our one concern was to again see them and their get. An added attraction is always to be had there with a social visit with Mr. Thompson. If there is one breeder more than any other that is to give you new ideas, then that man is Mr. Thompson. He has been a fancier and breeder since the sun shone on his bare

BUFF ORPINGTON COCKEREL.

Solid buff, full red eye; weight, 10 lbs. Owned by Valley Poultry Farm, Galesburg, Mich.

feet in happy school days, and in all his years of experience he has had the opportunity of meeting and being in line of all the development that has taken place in the Barred Rocks for over thirty years. He knows them from their crude first stages to the marvels of the present day. His success has been to a great degree their making in quality and value, while their quality made their value and have made Mr. Thompson both famous and independent.

Mr. Thompson has this year close to sixty breeding pens of Barred Plymouth Rocks of from six to ten females in each. There is a purpose to every mating that can be seen far better than explained here. Suffice to say that every bird on the place is known and every result is noted for future reference.

It is really impossible for us at this time to attempt to describe any great number of these matings. They are very choice all through and we have selected a few for special mention that will give a fair idea of all.

One of his first pens contains a cockerel son of his New York champion and almost an exact counterpart of this great bird. His style is the same. While we think his barring is somewhat improved, if that be possible, his is the strong blue color that is clear and clean. His mates are six large yearling hens, bright and snappy barred outside and in. While Mr. Thompson claimed this cockerel to be the best bred from Champion, there were two others, full brothers, in the next pens that surely

would make competition for any bird or birds.

Further down is the third New York cock, a yearling son of the champion, whose grand style, size and barring make him one of the best. His mates are eight superior pullets, grandly barred and with the fine long backs, low tails and small, well-set combs. A mating of best merit.

The next was also headed by a cock bird of which Mr. Thompson well said, "I expect some great cockerels from this pen." The cock is rather medium dark, but blue and clean. His six mates are wonderful pullets, very narrow and clean barred and right to the skin, and we should say perfect wings, red eyes and low combs. We would call this pen "Linger-Longer."

Of the next pen cockerel Mr. Thompson said: "This is the cleanest, brightest and

at show time. We considered that cockerel one of the three best we have ever seen.

Several of the following pens were headed by males of this same line. In fact, it is this line with the champion line that we consider the very best Mr. Thompson has. Each has its own characteristics, and each has its quality, just about as well as you can hope to find.

We noted that Mr. Thompson very often referred to the cockerel's face and eyes, and on asking received this from him: "Let me say right here, this is a point of great importance. My Champion line have what I consider a rare and valuable characteristic; above all else they have that is good, that is characteristic, is large face and big, expressive eyes; their eyes have big pupils; such eyes and faces to me show much intelligence, and this Champion line

How Much is it Costing You to Feed Chicken Lice?

Chicken, young or old, is a mighty expensive dish to feed to lice. There is no true growth or development or egg laying with lousy chickens. People are raising scrubs and dunghills when they might be raising fine fowls. They lose in health, in thrift, in size of birds, in actual pounds weight, and, most of all, they lose in eggs.

The number of lousy chickens is amazing when it is so easy to get rid of the pests by George H. Lee's method.

By the Lee way, you don't have to handle the fowls and get chicken lice all over you. Lee's Lice Killer kills by its deadly fumes. Simply paint or spray the roosts, that's all there is to it. Lice on fowls and perches drop dead. Nothing could be easier, nothing more deadly for the lice, nothing more harmless to fowls.

Are you one of the careless ones about keeping your fowls and their quarters free from vermin? We would like to talk to you personally, just five minutes, on this subject. The talk is in our great little free book, "Lee's Chicken Talk," written by Mr. Lee himself. Let us mail you a copy. You can get Lee's Lice Killer from almost any dealer in 35c, 50c and \$1.00 cans. If you don't find it, send the money to us. We will deliver a gallon, express prepaid, for \$1.25.

White Wyandottes, J. C. Fishel & Son, "The World's Best." There you have everything in a nutshell. This favorite variety of Wyandottes has perhaps been brought to a higher degree of perfection by this veteran breeder and his son than many other varieties can boast of. The above illustration shows how close they have succeeded in breeding to Standard requirements, and the many first prizes which their birds have won in the hands of customers this season shows that their stock is worthy of the highest honors. Their new 1910 catalog is just off the press. Beautifully illustrated throughout the book and adorned with a handsome embossed cover design, it is indeed a work of art and one of the best catalogs that has come to our desk this season. Not only does it contain valuable information as to the mating and breeding of White Wyandottes, it contains also many of J. C. Fishel's own wrinkles which have been responsible for and have been the secret of success. Ten cents in stamps enclosed in a letter addressed to Box J, Hope, Ind., will bring this fine book. It's well worth the money.—L. Stahmer.

best barred cockerel I have ever seen." He is a wonder and all that is claimed for him. Besides his extraordinary color and barring he has both size and shape. His mates are seven hens that are superior in every way and proven breeders, having bred some of Mr. Thompson's best last year.

We were particularly interested in this cockerel after learning his breeding, as he is the grandson of the wonderful cockerel we saw here three years ago, a bird that was never shown, for he was never in shape

of males are knowing birds. I have always looked much to the appearance of faces and eyes, as well as to color."

The Pullet Matings.

In these as well as in the cockerel matings Mr. Thompson has used his best care in mating, and, as he well put it, "I have had a great many good ones in the past, but this year I feel my matings are away ahead of any past effort."

One of the first seen has the females of

CONGO ROOFING

Guaranteed

We guarantee Congo Roofing. And our guarantee means something. It is not just a pretty piece of paper. It is genuine Surety Bond issued by the National Surety Co. of New York.

It affords the most absolute protection to the buyer of Congo that can possibly be devised.

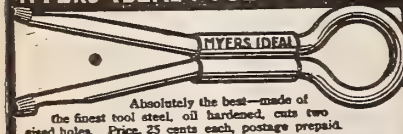

You will find one of these bonds in every roll of Congo.

We would like to send you a copy of the 10 year guarantee bond and a sample of Congo Roofing free.

Pays for one year's subscription to American Poultry Journal and a copy of "How to Build Poultry Houses"—A 64-page book on poultry house construction.

his third prize New York pen and four others of the same breeding. They have sharp, snappy barring throughout, bright wings and perfect heads, mated to a beauty cockerel, bright and very closely barred and of extra size and shape.

Another pen has the four females of the first New York pen and silver cup winners, also two others of same line and the best pullet bred last year; with these is mated a son of the best hen from the first New York pen that is one of the Ringiest cockerels ever bred.

Of the next pen Mr. Thompson says:

This pen consists of seven pullets mated with a cockerel that is a wonder for barring. This pen is mated with a definite object, to get very narrow barred wings. All these seven pullets are high class show birds, being of splendid size and shape, close, narrow, bright, even "Ringlet" barring, with red eyes, yellow legs and beaks; in addition they have very narrow straight barred wings, both

breeder. With him are mated eight pullets, four full sisters and four half-sisters slightly related to the cock. These pullets are of the highest type of exhibition color and barring, with splendid wings and yellow legs and beaks.

Another pen consists of seven two-year-old hens, four are full-sisters, their mother was "Katherine L.," a winner of three ribbons at New York, they are great show hens. The other three are among the best pullet bred hens. The cockerel in this pen was selected as having just the barring and color also line of breeding to produce with these hens' grand show pullets.

Another pen containing eight exhibition pullets, all sisters, they were hatched from first prize silver cup pen pullets of last year. The male heading this pen is a cock bird with very narrow barring, very bright and just the right shape to produce winning show pullets; he has a very narrow barred wing.

One of "Hurt's" line-bred, blue-blooded Single Comb Buff Leghorn first prize-winning males that he is using in his special matings this year. Sired by "Boston Buff" cockerel winning first and special at Boston for best cockerel in the show, and grandsire was winner of eleven first and nine special prizes in four different states. Bred, owned and exhibited by Peter S. Hurt, Thorntown, Ind.

secondaries and primaries. The cockerel's wing is a wonder in this respect, his mother had the best wing I ever saw, he has perfect color, very narrow barring and very straight across the feather. I would also state that both the secondaries and primaries in the wings in every bird in this pen including the cockerel are fairly short and perfectly folded. I consider a wing fairly short much superior in shape to the long quill feathers that are so often seen; these short wings usually come on a good bird. I feel especial interest in this pen.

Another mating is headed by a cock bird that has sired several New York winning pullets, he is three years old, perfect in condition, of great size, wonderful color and barring, he is a great

So much for the "Ringlets" at this time, it is very evident that they are still making good, as Mr. Thompson reports a greatly increased business over all former years.

Mr. Thompson's catalogue is a very elaborate one, that is mailed free to all interested persons.

Royal Blue Barred Plymouth Rocks.

It is but a short trip from Waltham to Lancaster, Mass., the home of A. C. Hawkins, and one of our oldest as well as best known breeders of Plymouth Rocks and Wyandottes. Ever since we have been able to read we have been interested in poultry and the name "Royal Blue" has ever been familiar to us, as it has to all others that read the poultry

papers. From the first Mr. Hawkins has been a most liberal advertiser, and it has been to his advantage to let the world know of his winnings and breeding.

While Mr. Hawkins breeds all three varieties of Plymouth Rocks, and four of the Wyandottes, it is evident that the Barred Rocks are his specialty. We were here a year ago and wrote up this line fully, we found birds of the highest merit here then and tried hard to do them justice, but what changes are possible in a year's time, grand as were these matings a year ago, we are free to say that the 1910 matings are far superior and undoubtedly the best Mr. Hawkins has ever made.

There were twenty-five or more pens of Barred Rocks here, one the full equal of the other, and as we went down the line with Mr. Hawkins we could not find a flaw of any kind, or an opportunity to suggest any improvement.

In one of the first pens we again saw "Royal Blue," winner of first prize cockerel and champion male at the 1909 New York show. This grand fellow has wonderfully retained all his great qualities that placed him winner above all at our greatest show a year ago. He is grandly mated and his wonderful breeding quality proven last year will undoubtedly again be improved.

Close by was "Boston Blue," the winner of first prize and champion male at the Boston, 1909, show; he was also awarded the Lawson cup for best Plymouth Rock male. In "Boston Blue" Mr. Hawkins has a superior cock and to our notion the full equal of "Royal Blue," both have exceptionally fine tails, well carried, with long and very clean saddles, strong eyes and fine combs.

Then followed eight pens headed by sons of the above, cockerels that have never been shown, these make a great showing, as seen here at their best condition. Mr. Hawkins told us that these cockerels were hatched June 20 last, which goes to prove our contention for years that June hatched birds are really the choicest in color. His second prize cockerel at the late New York show and also the others shown there were all June hatched.

Down beyond the long breeding house are the colony houses, each with close to an acre of land fenced in. Here were also pens of Plymouth Rocks, and as Mr. Hawkins led us down that way we noted the broad grin on his face and were prepared for his secret which he had kept up his sleeve. In the first yard we found "Little Boy Blue," a cockerel of as narrow, bright and sharp barring as we ever hope to see. Besides his wondrous barring he has size and shape and a most beautiful head. His eight mates also number some of Mr. Hawkins' best hens, among them the dame of the second New York cockerel, 1910, and her sisters.

It was the same here as was noted before; the further along we went the better they seemed to be. The females were without exception birds of quality and from eight to ten in each pen. Here as we went along we had a look into each nest and found to our surprise that Mr. Hawkins was getting

at least an 80 per cent egg yield from his entire flock of Barred Rocks. This may not sound well to those that see nothing but fine feathers in exhibition birds and claim that our Standard demands the opposite to what they call the egg type. But these statements are true just the same, and they verify our contention that the nearer we breed to Standard and exhibition quality, the closer we get to real, practical qualities.

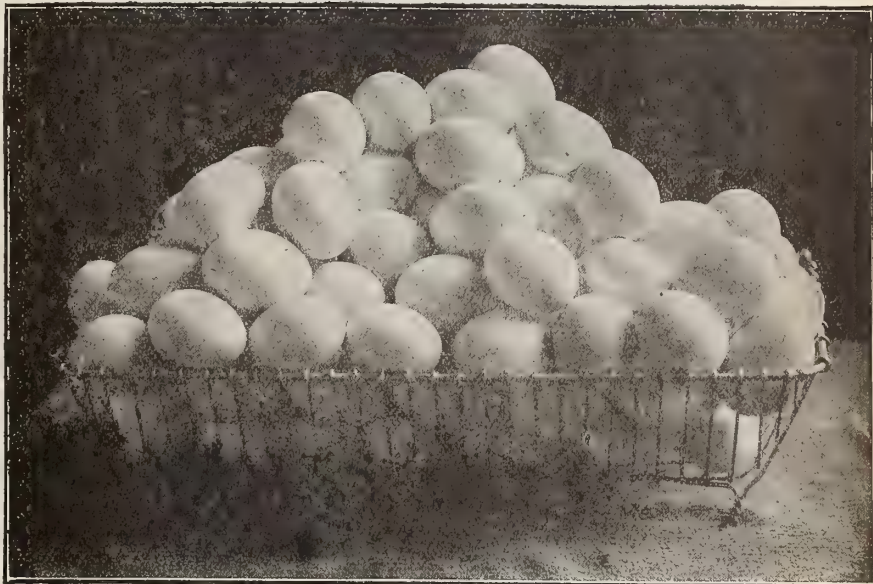

In pullet matings Mr. Hawkins has several yards and they line up full as well as do the cockerel matings just mentioned. This line all through is one that will have to be reckoned with in the future as it has been for thirty or more years in the past. Mr. Hawkins gives his entire attention to his poultry and is a very busy man, to say

their markings. His White Wyandottes were next seen, and then followed the White Rocks. In all of these we saw grand stock and admired them, but our crop got full quickly and when we suggested to take a walk back to the Barred Rocks again we found Mr. Hawkins just as ready to go as we were.

Mr. Hawkins' catalogue tells more of his stock and should be in the hands of every breeder of his varieties. He has the goods to interest, and, as we told him, that if we were to order eggs we would just send the money and let him send the eggs from whatever pen he could.

Barred Rocks at Leominster.

At Leominster, Mass., we found Mr. Haldie Nicholson at home. He is one of

The above illustration shows the kind of eggs laid by the Single Comb Black Minorcas as bred by Charles G. Pape, Ft. Wayne, Ind.

the least. That he is up to date is attested by his securing a son of "Fluffy Ruffles" last year and in making a special mating is now breeding his sons to all his best females in this line with assured success.

At the late New York show Mr. Hawkins sold three of his cockerels for \$500. This included his second prize bird. Since then he has refused several times such prices for birds now in his pens. The birds sold have since been winners at prominent shows, which speaks well for this line.

In Columbian Wyandottes there are several grand matings with a winning record of the best. The shape of these was particularly fine and was closely followed by

the most enthusiastic fanciers and breeders that we have met. He breeds only the cockerel line of Barred Plymouth Rocks, and how well he has succeeded is best shown by his record made at Boston, Mass.

For three successive years now he has won first prize cockerel, and last year took down the Lawson cup for final ownership, having won it three times on best Barred Plymouth Rock male shown.

This year was no exception. He entered but the one cockerel and won first in what they call easy manner, and although he claims it was his last show, we hope he will change his mind and keep showing his quality for years to come.

His matings as made this year are of the

"ARISTOCRATS ARE THE RICHEST COLORED BIRDS IN THE WORLD"

Ringy

"ARISTOCRATS ARE THE RICHEST COLORED BIRDS IN THE WORLD"

best. He still has the grand old cock that won both as a cockerel and a cock at Boston and who is the real foundation of his present day winners. He is mated to but five females of the choicest quality, and among them is his grand old hen that has produced his line of both winners and producers.

The first Boston cockerel of 1910 heads another pen, and close by is a full brother, his equal, to our mind. Both are strongly mated and give every promise of results.

Two other matings were seen here and

mastered fully. Fair or well enough won't do—all must be simply right all the time.

The Beauty and Utility Line.

At Lancaster, Mass., and right next to Mr. A. C. Hawkins lives Mr. C. H. Latham, whose Beauty and Utility Strain of Barred Plymouth Rocks are well and favorably known. At the time of our visit Mr. Latham was away from home for the day. Still, in charge of his man we had the opportunity of seeing his birds and noting his matings. That, of course, was our interest.

WINNER OF FIRST PRIZE AT NEW YORK DEC 27 1909-JAN 1910
BRED & OWNED BY D. V. YOUNG, MONROE, NEW YORK U.S.A.

both were headed by a son of the cock mentioned above. They excell in barring and have as fine head points as we can wish to see. This whole line was very interesting to us. We knew of their proud record and had long waited the opportunity to see them.

In Mr. Nicholson we found what we may well term one of the old line fanciers. His success is a matter of detail, which he has

Mr. Latham makes a specialty of the pullet line. How well he has succeeded is plainly shown by his New York and Boston show records, which are all given in his mating list, that will be mailed for the asking.

The matings here were all of a character that may well be surmised when we consider the records this line has made on females. In going from pen to pen we

noted exceptional birds in each, birds of a record and others their full equal in quality and of the same style of breeding.

We here again had the pleasure of handling the first prize New York hen of 1910, also the second prize pullet, as well as Mr. Latham's Boston winners. At Boston both in 1909 and 1910 this line made close to a clean sweep on both hens and pullets, a record of which Mr. Latham may well feel proud.

CHARCOAL AND SPONGES.

Curious Odor-Absorbing Quality of Charcoal Makes It Valuable in the Poultry Yard.

That there is a similarity between charcoal and the ordinary commercial sponge would not at first occur to anyone. Yet the two substances are quite similar in having large absorbing qualities. The sponge, as everyone knows, absorbs moisture, while charcoal is pre-eminent as an absorber of odors and particularly those that are unpleasant as well as injurious to health.

The finer the sponge the more water it will absorb, while the quality of the charcoal determines its odor-absorbing power. To absorb odors most thoroughly it must be twice burned or charred.

Poultrymen, in particular, should always have a high grade twice-burned charcoal where the chickens can get it at all times. The Department of Agriculture bulletins show that a hen will eat nearly two and one-half pounds a year.

When a porous, sponge-like charcoal like "Esso" twice-burned Chicken Charcoal is taken into the digestive tract of fowls, the tiny holes or cells absorb the impure gases in the crops and gizzards and take away that sour condition that breeds disease. Ordinary charcoal, which is often little more than poorly charred wood, may prove harmful. Fowls with crops of fermenting food cannot be healthy. They cannot tell you that there is trouble with their digestion. The first you learn of it is by seeing a lot of sick, unprofitable birds on your hands.

Not only does "Esso" Chicken Charcoal make sweet crops and gizzards, but it has a marked effect in the flavor of the flesh.

Anyone who has killed poultry that has been fed "Esso" Chicken Charcoal has always found the food in them perfectly sweet. This, of course, means that the flesh is good and sweet also. In other cases, where nothing has been fed to keep the stomach sweet, you will always find the crops filled with sour food. Hundreds of poultrymen testify to that.

In making "Esso" Chicken Charcoal only sound, clean wood is selected. This is dumped into great air-tight ovens and allowed to char for days. Running from these ovens are pipes through which we draw off any impure acetic acid, wood-tar, creosote, etc. Then the Charcoal is put through this same process of charring a second time to be sure that every particle is charred thoroughly. This is very important. A great deal of ordinary charcoal is simply half-charred wood—and is made of refuse timber and trash. That kind of so-called granu-

Champion Intruder, 1st cock and champion male, N. Y., 1908-9, both cocks and chks. competing. 3 of the last 4 champion males at N. Y. have been bred at Grove Hill.

EGGS—\$5 per 13; \$18 per 50; \$35 per 100; as they run from our best yards. Specially selected eggs to meet your special needs at special prices. Some splendid breeding birds at moderate cost closely related to our New York winners. Send for winning sheet. Send for our mating list, the largest and most complete issued.

Grove Hill Poultry Yards : William Ellery Bright, Prop. : **Box 410, Waltham, Mass.**
A. C. Smith, Superintendent

lated charcoal often contains ground pieces of partly charred wood, to say nothing of the other foreign matter that is liable to be injurious to the health of the flock.

"Esso" Chicken Charcoal is the best and the purest you can buy—better and purer and more efficient than any other charcoal. Because it is the only Chicken Charcoal that is re-carbonized—twice burnt. The only charcoal in which no gritty uncharred pieces are to be found.

Our readers should write to the manufacturers of Esso Charcoal, The S. Obermayer Company, Cincinnati, Ohio, for a copy of their booklet, "The Value of Charcoal in Poultry Raising." If you ask for a sample package it will be sent you free. A trial will convince you of its superior merits.

DRY-GRAIN, BALANCED-RATION, MACHINERY-MIXED FOODS FOR CHICKS.

On this page are two photographic views of the poultry food and alfalfa mill of the Cyphers Incubator Company, Buffalo, N. Y., claimed by the owners to be the biggest of its kind in existence. This mill is located at Kansas City, Mo.,

to become mixed with filth and then eaten.

There can be no doubt that it is better to keep valuable chicks on a regular diet composed of a time-tried, balanced ration of several grains, all sound and nourishing, than it is to feed them too much of one grain, or to give them first one thing and then another, as may be found convenient. It is far better that the chicks should grow steadily, first to last. If you value your chicks give them a fair chance. Judgment will need to be used in this direction if satisfactory results are to be obtained.

Cyphers Incubator Company was among the first to begin the manufacture and sale of dry-grain, ready-mixed poultry foods. Their trade-mark, sealed-bag brands of chick food for newly hatched chicks and developing food for older chicks have been on the market ten years. The manufacturers claim that this is long enough to test the true merit of any article of food. Many experienced and successful poultrymen are now using the Cyphers Company's all-grain foods and have been using them for years.

The attention of our readers is called

A VISIT TO THE REDSKIN POULTRY FARM.

Our representative, Mr. Zimmer, reports regarding Simmons & Crittenden, Geneva, O., who have named their farm and strain "The Redskin".

Upon leaving the Pittsburg show we stopped off at Geneva and found Mr. Simmons very busy mailing out their annual circulars. However, never too busy to show us around and talk with us regarding the Reds. They mated five pens containing all their birds, including many winners of the last two years. Mr. Simmons told us he had two specials this year and that is certainly speaking of their quality. We would be inclined to call them "crackerjack," or some other pet name. They were running in a large cherry orchard, with plenty of grass, and were in fine condition. Their pen A was headed by a real dark cockerel, but, as Judge Tompkins would say, with "lots of shine." He was fine in black points, eye and comb. We understand that he is from some of the best blood lines in the country and was purchased by Simmons & Crittenden soon after the New

WORLD'S LARGEST POULTRY FOOD AND ALFALFA MILL.

Two Views (from Photographs) of the Poultry Food and Alfalfa Mill at Kansas City, Mo., Operated by Cyphers Incubator Company of Buffalo, N. Y. Capacity of this Mill is Six Cars Daily of Machinery-Mixed Poultry Foods and Alfalfa Products.

the world's largest primary grain market, and has a daily capacity of six cars of 30,000 pounds each.

Day after day at this season of the year three and four cars of Cyphers company's sealed bag poultry foods and alfalfa are shipped from this mill for the use of poultry raisers in all parts of the United States and in foreign countries. The big grain bins hold twenty cars—a train load—at one time, and the hopper scale weighs a car of wheat, one thousand bushels, at each filling. The machinery and equipment, exclusive of the building, cost more than \$35,000.

One of the valuable discoveries of recent years in the poultry field has been the important advantages of using dry-grain, evenly-granulated, machinery-mixed, balanced-ration foods for newly hatched and half-grown chicks in place of raw or "cooked" mixtures, thrown together on the hit-or-miss plan, fed in course or wet form and left to sour in the sun and rain, also to be trampled on,

to the double-page advertisement of Cyphers Incubator Company in this issue of American Poultry Journal headed "Chick Murder—Help Us Stop It." The business standing and financial responsibility of this company are such that our readers can safely order direct from the advertisement. We are informed that the Cyphers Company has just issued five two-color circulars, devoted to seasonable poultry supplies, copies of which will be mailed free, postpaid, to any of our readers who mention this journal. Address the company's nearest branch store and warehouse as follows:

Cyphers Incubator Co., Buffalo, N. Y.; New York City, N. Y., 23 Barclay street; Boston, Mass., 12-14 Canal street; Chicago, Ill., 340-344 North Clark street; Kansas City, Mo., 2325 Broadway; and Oakland, Cal., 1569 Broadway.

Have you noticed the great offer on page 680 of this journal?

York show. The six females with him were three hens, every one a winner, and three pullets. One hen, Mr. Simmons told us, was four years old, and just as red as a pullet; another won first at Buffalo as hen, and her daughter first as pullet at the same show. The three pullets were grand, one being a sister to a winning male at Chicago last winter, and the other two winners at the recent Youngstown show. Pen B was another fine pen and headed by a cockerel which had the finest undercolor we have seen this year. His shape was especially good.

Space will not permit us to describe the other three pens, but they were of the same quality and no doubt will produce many winners.

We have known Messrs. Simmons and Crittenden and find their Reds improve every year. They are making their Reds pay their way, and surely will be heard from again next winter. They only attended one show the past season, that

VICTORY---Not Merely a VICTORY BUT A MADISON SQUARE, NEW YORK, VICTORY For BRIGHT'S BROWN LEGHORNS

Three firsts out of five or three times as many as any other competitor. First and second cocks on two entries; first and third cockerels on three entries; first pen on one entry.

Don't forget that this line of birds has won the most notable victories in all Leghorn history. Pan-American, St. Louis and Jamestown Exhibitions, New York, 1906-7-8-9-10. Boston, 1903-1909. Some splendid males of both Cockerel and Pullet lines for sale. Some breeders of Sure Winners. Reasonable.

being the Ohio branch meeting of the Red Club, held at Youngstown. Although handicapped by immature birds, they won a place in every class.

They offer eggs at half price after May 15, and also have a number of breeders for sale at the end of May.

Look up their ad in this issue.

HEUVELTON, N. Y., FANCIERS.

Almost every one has heard of C. F. Smithers, of Heuvelton, N. Y., and his Buff Wyandottes. I was very anxious to inspect his flock and see just what he had. After handling bird after bird that was absolutely buff in every section to the skin, I am glad to tell the readers of American Poultry Journal that I believe Mr. Smithers has one of the best flocks of Buff Wyandottes in the world today. His male birds are of that bright, even, golden color in all sections. None of the deeper color is to be found on their wing bows and back, but just one even shade from head to tail. Mr.

Smithers has no use for poor birds, and if he has any they are not to be found on his place. He enjoys a splendid trade and knows how to take care of it. As he says, by having satisfied customers.

F. J. Eysaman, the Single Comb Black Minorca specialist, I found at home busy with his birds. Here could be seen Black Minorcas with quality good enough to suit any one. His entire flock is exceptionally free from purple, well up on legs, long in back, with tails carried at the correct angle. Mr. Eysaman's Minorcas have been large winners at New York State Fair, Heuvelton, Ogdensburg and other shows in the past few years.

T. J. Connolly & Son breed Rose Comb Black Minorcas of superior quality. I was very favorably impressed with the Rose Combs here, as they were exceptionally large, many of them equaling the Single Combs in size, and the color was simply grand, showing that the above breeders know their business in producing high quality Rose Comb Black Minorcas.

Wm. Stewart, the Single Comb White

Leghorn breeder, showed me some of the best birds of this variety it has ever been my pleasure to inspect. He not only has one or two good ones, but a lot of them. One male especially is good enough to show anywhere and get in the money. I look to see some fine youngsters from this flock when I make my visit here in the fall.

At E. B. Allen's I found some grand Buff Rocks, and one of the finest flocks of Indian Runner ducks I have ever seen. Mr. Allen informed me that he wished to dispose of the ducks, and I can assure any one that is fortunate enough to acquire this flock of Indian Runners that they will be more than satisfied with their quality. Write him at Heuvelton, N. Y.

Harry M. Lamon.

THE HALL EQUIPMENT.

The Hall Mammoth Incubator Company has equipped a large number of poultry plants with its incubators and brooders, and that they are giving excellent satisfaction is made plainly evident by such letters as the one we quote below, which was written in reply to an inquiry in regard to their value:

Plainfield Sanitarium,
Plainfield, N. J., Jan. 25, 1910.

Mr. L. A. Blazier, Basking Ridge, N. J.

Dear Sir: Yours at hand. I have found the Hall System all that they claimed for it. We set 1,500 eggs in December and hatched over 70 per cent. Some hatches were over 73 per cent, but the eggs came from a distance by express and the last lot got chilled, which brought the average down. We do not test the eggs out, as the trays work better when full, and with good eggs we do not get enough clear ones to pay for the trouble. The best hatch I ever had

S. C. Black Minorca cock as bred by F. C. Wing, Wayland, Mich.

with a lamp machine was 73 per cent in April. I have hatched as high as 85 per cent with the Hall. The percentages are of all the eggs put in.

We ran the incubator last winter from December to late June on about two tons of coal. Have never kept an exact account of amount of coal used to carry through a single hatch. I assure you this machine is in an entirely different class than the lamp machines. There is simply no comparison between the two. To run this machine with 6,000 eggs is really less work than to run one lamp machine, except the additional time required to turn the larger number of eggs. It hatches more chickens than any I have tried or seen. I am now installing 120 hovers. You are so near here you should come down and see the machines in operation. Come by the way of Sterling and we are at the upper end of Somerset street, near the end of the trolley. Should I not be here my man will show you the plant and tell you how to run it. Truly yours,
(Signed) Justus C. Cooley.

The Hall Company has just issued a new brooder catalogue describing their brooder system, self-regulating furnaces and colony house brooder. For their main catalogue and this brooder catalogue address Hall Mammoth Incubator Co., Dept. X, Utica, N. Y.

Our readers are requested to look up the ad of Charles G. Pape, Ft. Wayne, Ind., in this issue. He is making a special midsummer egg sale from his celebrated S. C. Black Minorcas. Mr. Pape has, no doubt, produced some of the best S. C. Black Minorcas ever bred or exhibited in this country and is therefore in a position to satisfy the most critical. You cannot do better than write him for full information, and mention American Poultry Journal.

M. Guckel, Box 1, Kirkwood, Missouri

STOP, LOOK AND JUST READ THIS NOW

Rockandotte Farm is ahead on breeding White Rocks. Why? Because Graves breeds his birds. Does this not convince you this is true? First cockerel and color special at Madison Square Garden, N. Y., two years in succession and at the last N. Y. show the first cockerel and color special was won by a bird bred and raised by us and we were given the liberty to advertise same. At Boston, 1910, we won 1st and 3d cockerel and color special on 3 entries, also \$100 challenge cup for champion male, competing with the largest plants of the East. These are only a few of our winnings. Just send for our mating list which gives you a report of our great wins at the great Tri-State Fair, Memphis, Tenn., last fall. This with our previous records will show you without further explanation, that we must have the quality to produce these winners at the world's greatest show, Madison Square Garden, N. Y. Eggs are \$10 and \$5 per setting. Just give us a trial and we will guarantee to please you. All correspondence answered cheerfully. Write today and be well pleased, to ROCKANDOTTE FARM, W. R. Graves and Mrs. S. H. Graves, R. F. D. No. 3, Southboro, Massachusetts.

Victory For Bleakley's Buff Rocks

At Missouri State Show, December 6th to 11th, the largest show ever held in America, my Buffs, in competition with birds from all parts of the U. S., made the following unequalled record: First, third, fourth cockerel; first pullet; fourth cock and third pen. Southwest District cup (comprised of ten states) for best cock, hen, cockerel and pullet; silver cup, gold medal and diploma for best cockerel; silver cup for best pullet. Tied for \$100.00 silver cup for best cockerel in show; two club specials for best colored male and female. This, with my record of the past six years, makes my Buff Rocks the greatest winning strain in America.

J. J. Bleakley Life Member American Poultry Association R. 3, Box B, Abilene, Kansas
State Vice-President Buff Rock Club

Brown's Exhibition Barred Rocks

Winners at the leading shows in Illinois. Eggs, half price after June 1st.
Write for mating list and list of winnings.

Edward Brown, Route 37, Mendota, Illinois

Whitney's White Rocks

By their great winnings at Ontario, Guelph and International, Buffalo, have shown their quality and have proved themselves birds of highest merit. My pens include all noted winners and are mated in such a manner as to produce best possible results and prize winners. Eggs, \$4 per fifteen.

C. J. Whitney, -:- Galt, Ontario, Canada

S. C. W. LEGHORNS

SNOW FLUFF STRAIN—In originating and improving our strain only birds of highest standard type and greatest laying qualities as shown by accurate individual trap-nest records were used. As a result today we have not only one of the greatest prize winning strains in the world, but are unequalled in egg producing qualities. We won 1st pen Cleveland '08 and again in '10. Eggs for hatching (containing 1st prize pen 1910), \$5 15. Other grand pens of highest excellence, \$2 per 15; \$12 per 100. Incubator, \$8 per 100. Satisfaction guaranteed.

White Feather Poultry Farm : : : Rocky River, Ohio

S. C. R. I. REDS

At Wheeling, W. Va., my Reds won first pullet, first and third cockerel, second hen; also specials for best shaped female, best colored male and best colored female. Eggs for sale from select matings. Write for prices and particulars.

Geo. H. Keck Edgewood Wheeling, W. Va.

PAGE FENCE FREE.

When the manufacturers of Page Woven Wire Fence published an offer to send an actual sample of the fence free to any prospective fence buyer, they little realized what an enormous number of these samples would be required.

For months the requests for free samples have been pouring into Adrian, Mich., and still they come. Every farmer in the country has heard about Page Fence, which is the pioneer of all woven wire fences. It stands for the highest quality known in the wire fence industry.

It is famous the world over for its wonderful toughness, elasticity and durability. Hence, there has been a regular deluge of requests for samples.

The distribution of these samples has served the purpose of emphasizing the importance of buying the best quality of wire fence.

The Page Woven Wire Fence Company has enjoyed one of the most successful years in its history. The little "sermons in steel," as the samples are called, have carried conviction to thousands. If you have not already done so, write a letter or postal card to the company, Box 222, Adrian, Mich., and get a free sample of Page Woven Wire Fence.

IMPORTANT NOTICE.

C. E. Spaugh, Rugby, Ind., the well-known Barred Rock breeder, requests us to announce that after May 15 he will fill orders for eggs from his best pens at one-half price, or \$2.50 per 15. This is a rare opportunity for our readers to get the benefit of Mr. Spaugh's years of labor in bringing his stock up to their present high state of perfection. Send in your order now to be filed on May 15. Mention American Poultry Journal when you place your order.

The Candee Incubator & Brooder Company, DeWitt, N. Y., which has been manufacturing brooding systems for a number of

Mansfield, Tiffin, Ohio State Fair, etc. Besides White Wyandottes they are shipping chicks from Columbian and Buff Wyandottes, White Orpingtons, S. C. and R. C. Black Minorcas, Barred and White Plymouth Rocks, White and Brown Leghorns and R. C. Rhode Island Reds of equal quality. This company was incorporated under Ohio state laws by several well-known breeders of the fancy and is one of the few mammoth hatcheries that hatch eggs from strictly fancy stock and price their chicks so anyone can afford to own the best. They issue a free catalogue and their ad can be found on another page. Look for the stork.

Are you congratulating yourselves on your big hatch? If you will listen you will hear another sound of rejoicing. It is the lice that are congratulating themselves on the same large hatch as usual. The heat and moisture problem is the least of their troubles. Their young never die in the shells, they come able bodied and ready for work, teeth and all. You have the superior intelligence to combat these pests in the interest of your little chicks. Use it this year and get in ahead of the lice. Use Dustyne under your hovers, in your brooders and later in your colony houses. The Dustyne way is the sure and intelligent way to handle the lice and mite problem and at just this season we cannot urge you too strongly to use Dustyne in the interest of your little chicks.

Jonas Hayner, Livingston, N. Y., the Barred Rock breeder, who knows how to

First prize Single Comb Black Minorca cock at Chicago, 1909. Bred and owned by Charles G. Pape, Ft. Wayne, Ind.

produce birds good enough to win at Madison Square Garden and Buffalo, is offering eggs for balance of season at \$3 per setting. This is the month in which to hatch your next season's winners and you cannot do better than to order a setting or two of eggs from Hayner. Send in your order at once and mention American Poultry Journal. You will get a square deal.

H. J. Shann, Painesville, Ohio, the well-known S. C. Black Minorca breeder, reports that his eggs this season are hatching exceptionally good. This, together with the fact that his birds have been prize-winners at all the leading shows, assure his customers satisfaction. His prices are reasonable and those interested in this variety cannot do better than place their order now for one or more settings. Write him today and mention American Poultry Journal.

J. F. Van Alstyne, Niverville, N. Y., has just issued a very neat and attractive 12-page and cover booklet describing America's leading strains of Silver and Columbian Wyandottes. Mr. Van Alstyne produces stock good enough to win at such shows as Madison Square and Boston. Better write

him for prices and particulars, and mention American Poultry Journal.

AN ENCOURAGING REPORT.

E. W. Bogert, proprietor of Bay View Poultry Farm, Port Washington, N. Y., originator and breeder of the Bay View Strain R. C. R. I. Reds, reports that on April 7 he had 1,200 chicks out, hatched from his best pens. He says they are doing fine and he expects some very high-class stock, as his breeders are the best he ever owned, and he bred the first prize cock for Madison Square last year, and has in his yards his mother, two sisters and several of his daughters. His eggs are very fertile this season and hatching remarkably well. He is now offering some of his breeders for sale at prices to move them quick. This is your opportunity.

THE Best Investment Any Cow Owner Ever Made

That's what MORE THAN A MILLION COW OWNERS the world over have found the DE LAVAL CREAM SEPARATOR to be, after thirty years of separator use.

A DE LAVAL FARM SEPARATOR costs from \$40.- to \$175.- according to capacity. It saves butter fat and produces a cream of superior quality over any setting system or any other separator every time it is used,—twice a day every day in the year.

It involves far less labor than any setting system, and runs easier, has greater capacity and lasts from two to ten times longer than any other separator.

That's how a DE LAVAL separator saves its cost at least the first year, and frequently in a few months, and then goes on doing so right along for an average of twenty years.

Any desired separator information can be had of the nearest DE LAVAL local agent or of the Company directly.

The De Laval Separator Co.

165-167 BROADWAY NEW YORK	178-177 WILLIAM ST. MONTREAL
42 E. MADISON ST. CHICAGO	14 & 16 PRINCE ST. WINNIPEG
DRUMM & SACRAMENTO STS SAN FRANCISCO	1018 WESTERN AVE. SEATTLE

years, has now patented and put on the market an Incu-Brooder that can be made in sizes ranging from 2,400 to 20,000 eggs capacity.

The Incu-Brooder has been in successful operation at several plants for some time. It is meeting with excellent results. The machine is not controlled by a float or other frail method. On each compartment is an individual regulator in addition to the absolutely reliable automatic regulator attached to the coal-burning heater. An even temperature is guaranteed by the makers.

Another patented feature of the Incu-Brooder is that which allows the shutting off of any one compartment without interference with the balance of the machine. This feature gives the poultryman an opportunity to operate only the parts of the machine which he has need of and makes it very economical.

The Candee Company has recently been incorporated for \$50,000 and is now erecting a large and modern factory at DeWitt. Connected with the concern are some of the best men in the poultry and heating business in the East. The "father" and organizer of the new company, W. B. Candee, has a national reputation as a successful poultryman and is receiving the congratulations of his many friends on the launching of the new enterprise.

The new Candee catalogue should be in the hands of every poultryman.

On another page will be found a photo from life of one of the winning White Wyandotte cockerels at the Cleveland show, 1910. This bird was bred by the Co-Operative Breeding & Hatching Company, Tiro, Ohio, and heads one of the pens from which they are producing day-old chicks. He is only one of fifty grand breeding males they are using in their yards that have won the past season at such shows as Cleveland,

E. L. GEISEL, MORGANVILLE, N. J.

While at Morganville, N. J., I visited the yards of E. L. Geisel, who has 19 acres for the production of his Barred Rocks and Cuckoo Wyandottes. The farm is set out to peach, pear and apple trees, which to my way of thinking is the proper plan to pursue for those going into the poultry business. Fruit and poultry make a good combination, and means you get two crops from the land. Here I found eight pens of No. 1 Barred Rocks in quality, of extra large size and splendid layers. These were housed in the long breeding house. The young stock have colony houses and free range, which, combined with good care, give them their strong constitutions and large size. The large incubator cellar was full of machines, which were hatching at the time of my visit, March 20. Mr. Geisel reported business fine and expects to raise 3,500 chicks this season and is ably assisted by Mrs. Geisel, who is an expert in the handling of incubators and brooders. Five years ago Mr. Geisel conceived the idea of producing a Wyandotte with the plumage of the Barred Rock, and now has a most beautiful fowl with correct Wyandotte shape. At Madison Square Garden this last winter they attracted much attention, and I look for this new breed to become very popular in the near future. He reports them as exceptional layers. One hen laid 241 eggs last year. I was most favorably impressed with the Cuckoo Barred Wyandotte, as they have been brought to a high state of perfection by Mr. Geisel, who has spared neither time or money to get them to this point; and well merits the splendid business he now enjoys. His winnings on Cuckoo Wyandottes are Orange, N. J., 1909, first cock, hen, cockerel and pullet; Madison Square Garden, 1909, third cock, hen, cockerel and fourth pullet; Paterson, N. J., 1910, first cock, hen, cockerel, pullet and pen; Richmond Hill, N. Y., 1909, first cock, hen, cockerel and pullet; Red Bank, N. J., 1910, first cock, hen, cockerel, pullet and pen. On Barred Rocks Mr. Geisel has been very successful in the show room, some of his winnings being Orange, N. J., 1909, second pen, fourth cock, fourth cockerel, fifth hen; Paterson, N. J., fourth cock, third cockerel, fourth hen, fifth pullet; Red Bank, N. J., 1910, first exhibition cockerel bred pen, first and second pullet bred pen, fourth cock, fifth hen, fourth and fifth cockerel. At Red Bank, N. J., 1908, Mr. Geisel won the silver cup for best display on 38 points and numerous other specials.

Harry M. Lamon.

ADVANCE POULTRY FENCE GIVING SATISFACTION.

No matter what the manufacturers say—the surest proof of the value of any fence is what purchasers say. A good many of our readers have bought Advance Poultry Fence and it seems to be giving such universal satisfaction that it deserves special mention in our editorial columns.

Mr. Charles Berryhill, of St. Paul, Minn., recently wrote the following letter to the manufacturers of Advance Poultry Fence:

"I am so well pleased with the purchase last spring of a 10-rod roll of your fence that I expect later this spring to order a 20-rod roll of you. I hesitated at first about the purchase for fear that the stays (9 inches apart) were not close enough to turn fowls, but after a year's use I find it fits the purpose as well as the 2-inch chicken wire, with the material immensely superior."

It would be well for you to write to the Advance Fence Co., Elgin, Ill., for a price on Advance Poultry Fence, which is sold direct from factory to you at lowest factory prices and all freight prepaid. The company will be glad to send you points of construction and advantages. You will be interested in the continuous stay-wire feature—and the extra heavy galvanizing.

Write them a postal card now—and simply say, "Send factory price, freight prepaid, and description of Advance Poultry Fence." Then address the postal to the Advance Fence Co., Box 119, Elgin, Ill., and mention this paper for most prompt attention.

F. S. Smith, Hamilton, Ohio, the Single Comb Buff Leghorn specialist, reports a good trade in eggs and day old chicks, and has now over 3,000 young chicks ready to ship. He has 40 pens of S. C. Buff Leghorns mated for eggs this season, and he is operating seventeen 250-egg incubators and is therefore in a position to fill all orders promptly. He also states that from the one insertion of his ad in our March issue he sold over \$100 worth of stock. This is a remarkably good showing, owing to the fact that he is a new advertiser in our columns. But he delivers the goods.

**Cures
Prevents**

Bowel Complaint

'The greatest of all my discoveries, during my more than **25 years** of actual work with poultry, is how to **raise** the chicks **after** they are hatched. Bowel Complaint alone kills millions of little chicks every year, and in offering a positive preventive and cure for this disease I feel that I have contributed materially to the science of successful poultry culture.

My latest book, "Lee's Chicken Talk," tells all about this and many other things I have learned, some of which, I am sure, will be helpful to you, and I'll be glad to mail you a copy free on request.

Cheap at \$5.00 a Box

After my experience with Germozone I am satisfied it would be cheap at \$5.00 a box. Had 88 sick chicks in my brooder on July 1, used Germozone on them and still have **every** chick. It is a wonderful medicine and you deserve to make a million dollars out of it alone. Mrs. F. M. FRANCIS, Dalton, Pa.

We could send you a thousand letters just as good as the one above. Germozone is aiding thousands of poultrymen all over the world to raise **50 per cent** more chicks **annually** than they ever did without it. It is almost **infallible** as a preventive and cure for Bowel Complaint, Cholera, Chicken Pox, Roup, and other poultry diseases; at once the cheapest and most reliable poultry medicine ever manufactured.

Price 50 cents. At your dealer's, or by mail postpaid. Don't take the "just as good" kind—there isn't any. Watch for the name—**LEE**—and know you are getting the best.

A FAMOUS POULTRY BREEDER GIVES ADVICE.

In answer to many inquiries asking me what I consider to be the best way of starting in the poultry business, whether with stock or eggs, will say: A great deal depends on the beginner's financial condition. The purchasing of stock is desirable under certain conditions where the saving of money is not the object, but for the man in moderate circumstances I would strongly advise the purchasing of eggs from a reliable breeder; first, because it is more economical; secondly, because the novice will be able to start at the very beginning and grow up with the business, and by so doing he will learn by practical experience the many lessons in A, B, C poultry culture that will prove of the greatest possible benefit to him later on as his flock increases in number. I have been in the poultry business a great many years and I think I know some of the ups and downs of the business. I have never persuaded any one to go into the poultry business without also giving him some idea of how to take care of the little fellows when they are hatched. Do you realize this is the greatest "pitfall" a new beginner has? In fact, many of the older breeders are in the "pit" yet. I think it safe to say that 75 per cent of the chicks hatched die with bowel trouble, balling up about the vent, cholera, etc., etc. Many a man has given up the poultry business in disgust because of this most aggravating of all poultry troubles. Some years ago I myself felt prompted to throw the business up in despair, having tried and experimented with every known remedy, all to no avail. Now that you ask me to write an article for the new beginner, I want to give that new beginner the benefit of my experience. I have lost little chicks by the thousands from bowel trouble, but about five years ago I commenced feeding them what is known as medicated charcoal; and since that time we seldom lose a chick. When we hatch out a certain number of chicks we have reasonable assurance of bringing them through to maturity. I know positively that 90 per cent of the people who fail to make a success of the poultry business will admit it to be on account of either roup or bowel trouble in chickens, such as balling up about the vent, white diarrhoea, cholera or dysentery. These troubles can be guarded against and cured if gone about right. Medicated charcoal is the one thing to have on hand, and it can be gotten from the Des Moines Incubator Co., at Des Moines, Iowa. I don't recall just what the present price is, but if interested you can write a line to this concern and get all particulars.

I believe that while we try to persuade people to go into the poultry business, we should at the same time familiarize them with some of the trials they will meet with and thus save them much unnecessary disappointment. In conclusion I will say, I have found the poultry business pleasant, agreeable and profitable and would not change for any other business I know of.—F. J. Tishenbanner, manager, Iowa Poultry Yards.

The attention of our readers is directed to the large advertisement of the Taylor Instrument Companies of Rochester, N. Y., which will be found elsewhere in this issue.

This company is the manufacturer of the well-known "Tycos" incubator thermometers and hygrometers. Their long experience in the making of thermometers and a careful study of the incubator users' needs enable them to produce the instruments of absolute accuracy, adapted to the peculiar requirements of incubators.

Those intending to purchase incubators will protect themselves from the possibility of getting inferior thermometers with their machines if they insist upon the "Tycos" instruments. It is also possible to obtain these instruments at nearly all poultry supply dealers. If your dealer does not have them you can obtain them by writing to the advertiser. Write before you buy an incubator for their free booklet, "Thermometer Facts Worth Knowing." Mention this paper.

W. D. Lipe, Litchfield, Ill., the well known Rhode Island Red breeder, reports the safe arrival of a shipment of his Reds in Cape Town, South Africa, which he sold to J. Liebrandt last December. They arrived in good condition and his customer is well pleased. It pays to raise good birds.

Willow Shade Poultry Farm, Newark Valley, N. Y., have just issued a descriptive circular and price list of baby chicks and eggs for hatching. Their prices are very reasonable. Send for a copy and mention American Poultry Journal.

Concrete is Economical and Indestructible

Some farmers have not investigated concrete and its many uses on the farm, because they think it is a costly building material. *This is a mistake.* Concrete is economical, sanitary and permanent. It never wears out—cannot burn—and never requires repair. Many of the smaller improvements you yourself can build.

Send for FREE Book

Write for our handsome 168-page book—"Concrete Construction About the Home and on the Farm." It tells how to make and use concrete. This book contains many plans, specifications and photographs of farm structures that can be made of concrete.

WILSON FARM, MORRISTOWN, N. J.

Wilson Farm is located about four miles out of Morristown, N. J., on the celebrated Mendham road. There are 150 acres all told in the farm, of high, dry, well drained land, which is and I believe will be a large factor toward success as this farm grows. Here I found a business Single Comb White Leghorn farm, which today numbers 1,500 birds and is a success. It is business all the time at Wilson Farm, and things go right. The standard type of house here is 100x20, and the birds are kept in flocks of 500 each and have free range. Every device that is practical is used here that will save labor, which means the labor problem is cut down to the minimum. That part of the farm used for the poultry is set to fruit trees, which is only another example of fruit and poultry being the correct combination for the poultry man. The balance of the farm is worked along correct agricultural lines, much of the feed for the poultry also being grown. Alfalfa is grown extensively, and the day I visited the farm they were putting in thirty acres of oats. Like everything else that is done at Wilson Farm the buildings are built along practical lines and set on brick and concrete foundations. And we were informed that three new buildings of the standard type were to be put up this summer in addition to one of the new mammoth incubators. The birds here are kept under most favorable conditions, and the brooder house, which was full of young chicks, showed the

vitality of the parent stock. The breeding birds are exceptionally healthy and of fine type. Many specimens were seen fit to show at any exhibition and win. White Leghorns that were well up on legs, with good, deep breasts, medium length backs, with low carried, well spread tails, were seen by the dozen, and I believe that Wilson Farm has one of if not the best flock of fancy and utility Single Comb White Leghorns to be found today. They do an extensive business in day old chicks, and market their eggs to an exclusive trade, which demands absolutely the best. Satisfaction or your money back is their method of doing business, and I gladly recommend them to our readers. They start a yearly "ad" with American Poultry Journal in this issue. Look it up.

Harry M. Lamon.

All poultry raisers have experienced large losses through the depredations of rats and mice, and this is particularly the case during the hatching season. It is, however, difficult to contend with these troublesome rodents, as traps are generally unsatisfactory and poisons cannot be used for fear of causing even greater losses by killing poultry and domestic animals.

This difficult problem, however, seems to have been solved by the Pasteur Vaccine Company, whose advertisement appears on another page. Their experts, who have made so many wonderful discoveries of vital interest to humanity, have devised what may be termed the "Ideal Rodent Exterminator." It is a virus furnished in gelatin or bouillon

form and is fed to the rodents on bait, which in the course of a few days causes a mortal and contagious disease that, however, only affects rats and mice.

Our readers will find it to their interest to investigate this matter thoroughly. Here is an exterminator that will not only destroy rats partaking of the bait but also those that come in contact with them, and, what is of prime importance to the poultry raiser, is that he can use the virus with impunity anywhere, thus killing off only those which he desires to get rid of.

By writing either to the Chicago or New York office of the above mentioned firm, they will be glad to send you literature if you mention this paper.

Have you had a copy of George M. Kline's catalogue, which tells all about his celebrated strain of Regal White Wyandottes? Mr. Kline has succeeded in producing White Wyandottes that were good enough to win the blue at the largest shows in the country, and is now offering eggs at reduced prices for the balance of the season. Write him at once for full particulars. Address George M. Kline, Box 64, Downer's Grove, Ill.

Ben W. Wilhite, Crawfordsville, Ind., breeder of Single Comb Black Minorcas and Buff Orpingtons, is offering eggs from choice matings that cannot help but give satisfaction, as they are as good as the best. Write him for special prices this month and mention American Poultry Journal.

40 BREEDING YARDS OF SINGLE COMB BUFF LEGHORNS

The largest Buff breeder in the world. My birds are bred to lay. Ten pullets in 1908 averaged 222½ eggs. Each bird mated in my 40 pens is a show bird and I have over 500 of them that are the pick of over 4,000 raised last year. In 1908 I won most of the ribbons at Hamilton and the great Cincinnati show, and 2 silver cups for best display. In 1909, at Hamilton, 1st cock, 2d and 3d hen, 1st and 2d cockerel, 1st pullet, 1st pen and silver cup for best display. In 1909, Cincinnati, 1st cock, 2d hen, 2d and 3d cockerel, 2d and 4th pullet, 2d pen and special for best colored male in show. The great St. Louis show, 1909, 2d cock, 2d pen, 3d pullet, 5th cockerel. Chicago, 1909, 3d pen; showing at the above three shows at the same time. Dayton, 1910, 1st and 2d hen, 1st and 2d cock, 1st, 2d, 3d and 4th pullet, 1st pen, four club ribbons and silver cup for best display in Mediterranean class. Columbus, 1910, 1st cock, 5th cockerel, 2d pullet, 2d hen, 1st pen. Cleveland, 1910, 3d cock, 5th pullet, 1st pen. Indianapolis, 1910, 2d cockerel, 2d pullet, 4th cock. Toledo, 1910, 1st hen, 2d and 3d cockerel, 1st, 2d and 3d pullet, 1st pen. I have over 900 birds for sale and running 17 250-egg incubators and can furnish day-old chicks at \$20 per 100; eggs, \$2 to \$10 per 15, and \$10 per 100. Write me if you want good stock or eggs.

Among Pennsylvania Breeders

The Poultrymen Cover This State as With a Net—The Varieties Bred Include All Standard Breeds—Ideal Climate and the Best of Markets Spell Universal Success—"The Breeders and the Birds We Met."

Written by H. P. Schwab, Eastern Representative American Poultry Journal, Irondequoit, N. Y.

THIS great state of Pennsylvania is a regular fancier paradise. Natural conditions make it so. Within its limits some over seven millions of people are at home on close to 45,000 square miles of land. We do not know the poultry population, but go where you will, you will find the fanciers and the poultry in quality and numbers.

To the traveler Pennsylvania appeals strongly for its natural beauty; here are mountains enough to satisfy all whose dizzy heights reach the clouds; ravines deep and grand, and as you are hurled by, there is enough change from one to the other to keep you awake to enjoy the beauties rapidly offered in succession. The mountain streams carefully winding their way down, and the rivers, high at this time (March) of the year, sweeping all before them, form a part as attractive as they are natural. Rich as Pennsylvania is in coal, oil, mineral, etc., it is far richer in climate and nature. Everybody seems happy, healthy and content. Well earned prosperity is evident the result of industry. Its poultrymen are of the up-to-date kind, fully awake to all their interests, as the following descriptions of the stock seen will prove:

Erie, Pa.

Here we first met Mr. Stratton of the Stratton Manufacturing Company, makers of "The Dandy" Green Bone Cutters. They have a very large plant fully equipped with every machine and device to insure the manufacture of perfect machines, a pretty good idea can be had of the size of this plant as well as to the present condition of the poultry business, when it is known that their sales of bone cutters run upwards of 15,000 per year, and as Mr. Stratton well said, "It is a continually growing business with ever increasing demand."

"The Dandy" is well named, and well made. The value of green cut bone for laying hens and growing chickens is acknowledged, and no doubt their catalogue will interest many of our readers. Note their advertisement in this issue.

F. W. Peters, Erie, Pa.

Mr. Peters breeds White Plymouth Rocks that have a show record as long as the years he has been breeding. For this year he has mated three pens that are carefully selected and grandly mated. His birds have grand size and shape and are as white as new snow. These matings impressed me very favorably and am sure grand results will be bred here. Mr. Peters' show record includes winnings at Erie, Cleveland, Youngstown, Sharon, Painesville, etc. At the Ashtabula he won the special for highest scoring pen at the show, etc. This year his winnings are: Youngstown, Ohio, first cock, first cockerel and fifth pullet; at Williamsport, Pa., in a grand class, he won third cockerel and fourth and fifth pullets in four entries. Mr. Peters is a very enthusiastic breeder; he has seen years of service as a member and also as secretary of the Erie Poultry Association.

tion. He knows the makings of a valuable show and breeding bird, and has well earned the success he has made as a breeder.

At Erie we also met Mr. Wm. Sappers, breeder of White Minorcas and some others. Mr. Sappers is a well known breeder and has a splendid show record on his birds.

C. F. Webster.

At Girard, Pa., we visited Mr. C. F. Webster and his White Plymouth Rocks. Here we found an exceptionally fine plant devoted exclusively to White Rocks and a quality of stock that both pleased and surprised us. Mr. Webster has been breeding for a great many years and his birds have made a reputation second to none at some of our best shows. His Cleveland (Ohio) record in particular, where he won all five first prizes, is worthy of special consideration. Here we found five pens mated for this season's breeding that give every assurance of producing improved quality. The matings are all small and only the choicest specimens are used. Shape prevailed, with color and head points very close up.

Our attention in particular was attracted to the males heading the pens. Three cocks and two cockerels are used. Every one of them both rare and choice specimens. The cock heading pen No. 1 we believe to be one of the five best White Rocks we have ever seen, his form, with simply snow white plumage and grand red eyes and pure yellow legs, make him one of the grandest. Both the other cocks and the two cockerels were close up in every quality. The pen No. 4 cockerel is a most promising bird, sure to make a record. Mr. Webster is a most careful breeder. His personal interests are in his birds, and he will leave his bank at any time to show his stock, of which he has every reason to feel very proud. This season he has issued a descriptive circular of his matings, which is mailed free to all interested. His line is the "Graves Strain" pure. Mr. Webster has some grand cockerels to spare, bred from his best.

E. H. Lichtenwalter.

Girard, Pa., is also the home town of our old and valued friend, Ed. H. Lichtenwalter, breeder of Buff Plymouth Rocks. We have seen this line of birds at Cleveland, Chicago, Buffalo, New York State Fair, etc., for years, where they have al-

IF EVERY POULTRY RAISER USED MEDICATED CHARCOAL, 150,000,000 MORE CHICKS WOULD BE RAISED TO MATURITY EVERY YEAR.

THIS letter from the President of the National Poultry Association will interest every poultry raiser in the country. Money could not buy a letter like this; it comes to us entirely unsolicited.

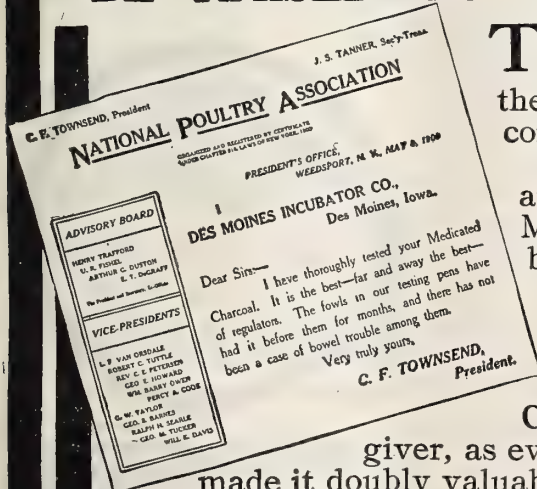

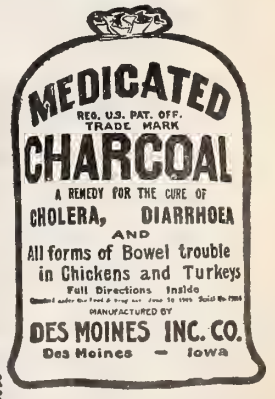

We have the greatest remedy for common chick ailments that ever went into the poultry-yard. Our Medicated Charcoal not only prevents but cures all bowel troubles. It positively

Saves Your Chicks From White Diarrhoea and Cholera

Charcoal alone is a wonderful health giver, as every poultryman knows. We have made it doubly valuable by giving it just the right medicinal properties. It purges, cleanses, purifies the blood, kills germs. It gives health, vigor and life to both fowls and chicks, renders them immune to disease. Carefully prepared under a scientific formula and guaranteed under the Pure Food Law. Its cost is nothing compared to the good it does in saving Chicks' lives. Don't fail to try it. In bags of convenient size; 10-lb. bag, \$1.00; 25-lb. bag, \$2.25; 50 lbs. \$4.25. Write today for Free Book.

NOTE:—Send 10c for booklet on Proper Feeding and Care of Chicks, Ducks and Turkeys. It will enable you to raise almost every chick hatched. Best Poultry Paper, 1 year 25c.

Driven Home

This personal, unsolicited letter is from the first purchaser of a

Sharples Tubular Cream Separator

in Kearney County, Nebraska. You could not ask a better one.

"Minden, Neb., March 1st, 1910.

To Farmers: I bought the first Sharples Tubular No. 4 that was sold in Kearney County, 11 years ago. This machine has been in constant use ever since and I believe it is as good as the day I bought it. I have been milking from 6 to 14 cows during these years, until two years ago, when I turned the machine over to my son, who is still using it on the farm. This machine has not cost us one cent for repairs of any kind. It turns easy and skims perfectly. It is easy to oil, as you just pour a cup of oil on the wheels and the wheels

run in oil. It is easy to clean, as there are only two pieces to the bowl to wash. It is always in shape, as there is less machinery about it than any other machine.

PETER SODERBERG."

Tubular superiority has driven home to farmers the fact that Tubulars are The World's Best. Sales easily exceed most, if not all, others combined. Tubulars probably replace more common separators than any one maker of such machines sells. World's biggest separator works. Write for Catalogue No. 205

Dept. 18 Cleveland, Ohio, U. S. A.

ways shown strong in the winnings. This year at Chicago he won first cockerel and first pullet; at Madison Square Garden, New York, second pen, fourth cock, fourth cockerel and fifth hen; at Buffalo, 1909, won all five first prizes; at Cleveland, 1909, first cockerel, second hen, second and third pen, fourth pullet and shape male special. At Cleveland, 1910, first cock, first hen, second pullet and second and fourth cockerel on five birds shown.

His four matings are grandly made for results. Mating list for the asking.

Part of our time was also given to S. E. Shipman, North Girard, Pa., breeder of S. C. Buff Leghorns. He also has a grand show record, which his quality admits. Besides a choice buff color, his birds have grand heads and good size, features worth remembering.

Beaver Falls, Pa.

Here we visited the Fuller Manufacturing Company, makers of Vitazone. Hens won't eat Vitazone, is seen in all journals now. Look up their advertisement in this issue, and if interested write for particulars.

Mr. Joseph P. Hildorfer.

Pittsburg, Pa., has many attractive features; a city of close to 800,000 people, located in the center of mineral wealth, it is only reasonable to expect the traveler would be greatly interested. If the traveler be a poultryman, his chief interest would be to meet Joseph P. Hildorfer and to visit his S. C. Black Minorca breeding yards. You will find in Mr. Hildorfer a busy man, but never too busy to stop and greet a poultryman.

Here we seen more silver prize cups and prize ribbons than at any other place. He has been a consistent exhibitor for many years at the great shows, including Madison Square Garden, New York; Boston, Cleveland, Hagerstown, Pittsburg, the World's Fair, Pan-American, and others too numerous to mention, making a record through his eighteen years of breeding that is a credit to the man and the fancy alike.

This poultry plant occupies two acres of land within the city limits, with an assessed valuation of \$25,000. The buildings are modern and practical, with ample room for each pen. One feature seen here was the cock house, used for males after the breeding season. Each has a long half shaded runway, where they can rest and moult with every want gratified. Mr. Hildorfer raises from 250 to 300 birds each year, quality is his sole aim, and how well he has succeeded his winnings attest. At the 1910 New York show he won first prize pen and second cockerel; this after losing down of one of his houses two weeks before the show.

If we were to describe the birds seen there as we would like, it would take pages to do them full justice, which both space and time forbid at this time, therefore we now will only give a general idea of the quality seen here, excepting one or two matings. Pen No. 1 is headed by the male in first prize pen at New York, mated to seven females (there are but seven to nine females in each pen). This male has certainly improved even beyond his grand New York show condition; his color is simply immense, size and shape grand, and tail full and broad, finely carried. The females excell in every quality making a mating of merit. Pen No. 2 is headed by second New York cockerel, a very classy bird with rare color, a grand head and beautiful size and form. The females here are of the same grade, nothing lacking. We found fifteen matings here, each one of quality, and each one of promise. Type, the prevailing feature, with a sound, clear color, and the best of head points. Going from pen to pen it was the same story over and over again. Every pen on an equal, one with the other.

Mr. Hildorfer can well shake hands with himself. Starting as a basket boy, he has won his way to success. At the late New York show he was elected president of the American Minorca Club, and for twelve years he has served his home city as an alderman from a ward representing close to 30,000 people. His only fancy are the S. C. Black Minorcas, and how well he has succeeded is shown by his record as a breeder and the esteem of his fellow men. He has a neat circular giving complete information of his line, which should be in the hands of every breeder of Black Minorcas.

At Pittsburg (Fidelity Building) we again met our old friend G. L. Mead, breeder of Barred Plymouth Rocks. He has a suburban home and spends his leisure time caring for his poultry. We expect in the near future to find him contending for the awards at the exhibits. He has a quality flock and his egg record can well be considered his greatest pride. We will hear more of Mr. Mead later.

Address F. H. LA BAUME, Agricultural and Industrial Agent Norfolk and Western Railway, Dept. B 51, Roanoke, Virginia.

Mr. Charles Shields.

We found Mr. Shields sick in bed, but improving, and in charge of Mr. H. J. Guckert, we had the opportunity to inspect most of Mr. Shields' Single and Rose Comb Reds. This line of birds is well known for their show record at New York, Pittsburgh, etc. Here we found birds of the choicest color, grand forms and beautiful head points. One R. C. cockerel won first prize and shape and color special at Pittsburgh. He is a beauty and owns one of the best heads we have ever seen, along with his other superb qualities. The Single Combs were of the same choice grade, as were also the females seen here.

Craig & Mapes.

At Mt. Lebanon, Pa., are the yards of Craig & Mapes, breeders of Buff and Black Orpingtons, and Rose and Single Comb Rhode Island Reds, of which they have twenty-eight pens mated for this season. These matings have been made with a knowledge of these varieties and with greatest care, as quality is the sole desire here. They have four special pens of Black Orpingtons, one headed by cock first at Philadelphia, 1909, and third at New York, 1909. He is a model in type and we were informed was used by the artists to illustrate Orpington type. One other pen is headed by a first prize Chicago winner, another by a first prize Cleveland winner, and the other the second New York pen male. In Buff Orpingtons there are eight matings that average up splendidly with the quality of the Blacks.

In Rose Comb Reds there are five selected pens, headed by second New York cockerel, also winner of shape special; another is headed by a grand old cock that has won four first prizes at Pittsburgh and other great shows. The females here excel in color and all have grand heads. Here are also found several beauty pens of S. C. Reds, good as they average, we seen one in particular that was easily as good as we expect to find at any place on the map. This cockerel won both shape and color special along with first prize at Pittsburgh's great show. We can well say all matings here are of the merit kind, the kind sure to give results, and we hope to see more of this firm's plant later. The plant is finely located, modern and practical. Both Mr. Craig and Mr. Mapes are enthusiastic fanciers. That they have succeeded is evident from the general high grade of all their stock, and we wish them every success for the future.

The Avon Farms.

At Pittsburg we also met the owner of the Avon Farms, Verona, Pa., breeders of White Plymouth Rocks. Here is another modern plant under the management of a thorough fancier. The Avon Farm White Rocks have been bred and shown for some years, particularly at Pittsburg, and we hope in the near future to show some illustrations of these birds.

Mr. J. Leroy Cunningham.

The Bred-to-Lay White Wyandottes and S. C. White Leghorns were seen at Mr. J. Leroy Cunningham's plant at Indiana, Pa. Here we found much to interest us. The feature of this plant is found in the egg records, made by this line of birds, as well as in their standard quality. Here Mr. Cunningham has succeeded, and within three years built up a plant I wish every one of our readers could visit. From the very first the eyes of the "Boss" have been on the egg basket and egg records. In the long poultry houses, with their several pens, as well as in all the colony houses, trap nests were used and the record of every bird on the place is kept. A lot of work to this, but it pays. The average egg yield has been increased over one-quarter, which alone pays running expenses, or nearly so.

Here we saw most excellent White Wyandottes and S. C. White Leghorns. Type a feature. It is very evident results are had here, for the quality of the stock proves all claims for them. America's champion hen (White Wyandotte) whose record for twelve consecutive months is 277 eggs; 17½ consecutive months, 361 eggs. She may well be called a champion, and Mr. Cunningham has her printed record as above, to which both he and his wife have made affidavits.

Mr. Cunningham has also issued a very neat catalogue, giving complete information regarding this hen and his matings, and this should be in every interested breeder's hands. We were most favorably impressed with this stock and plant, both are of the quality that insures success.

Williamsport, Pa.

This city has become famous for its breeders, as well as for the great poultry

COLUMBIAN WYANDOTTES

At Ohio Poultry Association, Columbus, January 10th to 15th, 1910, won first and second pullet; second hen; fourth and fifth cockerels. Eggs for hatching. Send for mating list.

BOX 295

shows it has held. Here surely are a select and great class of fanciers. We entrusted ourselves to Mr. Jas. T. Huston, of the firm of Gage & Huston, breeders of Barred Rocks and S. C. Buff Leghorns. Mr. Huston is also secretary of the Williamsport Poultry Association. They have a show record with their birds at Rochester, N. Y.; Elmira, N. Y.; Williamsport, Pa., etc. Their matings of Rocks are well made with grand quality birds. Their Buff Leghorns are simply immense. Two of the best males we have seen are right here; even color and extra fine heads. The females are of the same high grade, with beauty, size, etc. While we compliment and recommend this stock, we also wish to compliment this kind of breeders. They are fanciers first, last and all the time, and their sole object is to breed improvement each year and to satisfy their patrons every time. They have retained all their best breeders and all winners, so purchasers of eggs should receive great value from them.

Mr. John A. Parsons.

At Williamsport also is the plant of Mr. John A. Parsons, breeder of White Wyandottes and S. C. White Leghorns. In the White Wyandotte Mr. Parsons has three exceptional matings, and others close up. But in the three pens stated we saw as fine birds as we could wish for. Size and form, with well filled and spread tails the attractive feature. Snow White plumage, without a trace of brachiness and positive red eyes and yellow legs. This is the quality of stock we are after, and when seen as we found it here, is to be commended. Mr. Parsons has mated his birds for results, the pens are headed by choice males with every show and breeding quality, to only as many females as the most exacting expert could select, to insure the results aimed for. The head points were also noted with special interest and commended.

The S. C. White Leghorns were in every particular of the same quality and high grade, forming an excellent collection. The carriage and fullness of tails were a good feature. Mr. Parsons is now negotiating for a farm where he expects to breed extensively. He has accomplished much so far, and we feel assured his greatest success is still to come in enlarged quarters.

Other breeders met here, who have grand stock and are working faithfully along lines that will eventually place them to be reckoned with are: John R. Sims, breeder of White Wyandottes; his matings are very nice, as are also the Buff Wyandottes of Mr. L. W. Winner. This man made a good record at the late Williamsport show. John R. Heim is another White Wyandotte breeder whose record is good. We believe this includes the Rochester, N. Y., and Williamsport shows. There are others there, but limited time prevented further visits.

Mr. B. F. Kahler.

Of Hughesville, Pa., breeds, all eight varieties of Wyandottes, Barred and Buff Plymouth Rocks, R. C. Black Minorcas, S. C. White, Brown and Buff Leghorns, Buff Orpingtons, Golden Polish, S. S. Hamburgs, turkeys, geese and ducks. This place is splendidly adapted to poultry. Each variety is penned separately in roomy pens with large runs, and every detail here is seen at its best. The birds seen here were a pleasant surprise to us, as regards condition and quality, and each of his varieties deserve special mention for their real merit. In S. C. Buff Leghorns the cockerel in pen No. 2 won first prize at the Williamsport show in a class of 17, also the "Items" silver cup for best Leghorn at the show. He is an exceptionally fine specimen, with size as well as shape, sound color and beautiful head points. On Wyandottes Mr. Kahler has made a grand record, his birds have grand type and are of a very high average in every quality. As before stated all his birds looked good to us. It was a pleasure to meet Mr. Kahler again and to see his birds, as shown here at his home, a rare treat. He has issued a catalogue giving a description of all matings, which is sent for the asking to all interested.

Mr. Charles L. Pensyl.

What's in a name? Reader, if you really care to know, ask E. B. Thompson of "Ringlet" fame. A. C. Hawkins, whose "Royal Blues" have held favor of over twenty years, or in this particular case, better ask Mr. C. L. Pensyl, Bloomsburg, Pa., breeder of the "Nugget" Buff Plymouth Rocks. Behind these strain names are show records that have made them famous and popular. Where Buff Rocks are known the name "Nugget" is a home-word. It stands for reputation and quality through many years of breeding, and now after our visit to the home and yards of Mr. Pensyl we can well say that their quality, now, more than ever

before, fully deserves all the reputation they have made.

Here we found eight pens mated, all of a grade nearing ideal, and for personal satisfaction mainly, will describe some of these, as they appeared to us. Nugget, Jr., heads pen No. 1; he won first prize and shape special at the 1910 New York show. While his shape is simply grand, his color is very even, of the sound Golden Buff kind. He has a most excellent tail, well carried. Here are also a first New York hen and the second and third pullets at New York, 1909. This is certainly a beautiful pen of the best quality. Pen No. 2 is headed by the second New York pen cockerel of 1910, another rare beauty, with extra fine head points. He has fine size and shape and fine tail, properly carried, strong red eye, etc. Here is also found the New York first prize pullet of 1910 and two others from his New York pen. All of the ten females here are very choice in color and were carefully selected for shape; all these have a show record. Pen No. 3. A cock bird of proven breeding quality is seen here; his strong red eyes, with fine comb and choice, even color, make him a most desirable bird, several of his mates are winners, and on handling all others we were particularly impressed with the clean wings and tails. Pen No. 4. Here was another fine male with head points a leading feature, and mated as he is to quality birds, should show grand results. Pen No. 5. Here was the cock bird Golda 2nd, bred from a New York winner, a very handsome colored cock, sound and very clean, size and shape extra. The other pens were as near as could be of the same high grade kind. All birds were in the best possible condition, and we feel assured that every mating Mr. Pensyl has made will breed results.

The general evenness of sound color struck us forcibly in all birds seen here. The males have a fullness of tail that compares most favorably with any seen in either Barreds or Whites. Long and full saddles and plenty of coverts finished them beautifully. On handling all the breeding males, and nearly half the females here we found a quality in both wings and tails good to see. The cleanness was really surprising. The undercolor good all through. Mr. Pensyl surely has done well. The "Nuggets" in his care have been greatly improved. He is a close student, knows the buff color, and, what is far more, knows how to breed and produce it. He has a large plant, well located, and in fine condition. His success must be a source of great satisfaction to him. His catalogue shows several of his New York winners and is mailed free of charge.

Here we also met Mr. R. G. Pensyl, breeder of Buff Wyandottes and Partridge Wyandottes, both varieties were seen at their best. The Partridge looked extra good to me, the rich colored males and the fine marked females with grand Wyandotte type. Mr. C. C. Furman, breeder of White Wyandottes and Mr. B. H. Johnson, breeder of Buff Rocks, both have very fine birds and have show records.

PAGE FENCE
is woven from heavy high-carbon spring-steel wire; easiest and cheapest to put up. Lasts a lifetime. Catalogue from Page Woven Wire Fence Co., Box 222, Adrian, Michigan.

FENCE Strongest Made

Made of High Carbon Double Strength Coiled Wire. Heavily Galvanized to prevent rust. Have no agents. Sell at factory prices on 30 days' free trial. We pay all freight. 37 heights of farm and poultry fence. Catalog Free.

WE PAY THE FREIGHT

BROWN FENCE & WIRE CO. DEPT. 3 CLEVELAND, O.

At Rupert, Pa., we met Mr. W. B. Johnson, breeder of Barred Plymouth Rocks. We had heard of this man before, and were very anxious to see his stock. He has six matings, well made, and of very uniform quality. He has two very choice cock birds and his record of late winnings are apparently well earned.

The Penn Primo Feed Company, at Harrisburg, Pa., make a full line of poultry feeds under the care of Prof. F. D. Fuller. We hope in our next to tell more of this line.

Mr. G. M. King,

R. F. D., York, Pa., is one of the old-time breeders of Barred Plymouth Rocks. He has lately bought a large poultry plant and, from now on will devote all his time to his poultry. Mr. King, besides quality, from a show point of view, has always given particular attention to practical worth, and has combined both to an exceptional degree. From one of his best pens he has an egg record of 218 per hen for a year. Mr. King is precise in all he does, and now in his enlarged quarters will, we feel assured, make further success. It was our misfortune to see his birds by lantern light, and even under these conditions their excellent points were noticeable. Mr. King has read and advertised in the American Poultry Journal for over twenty years, and hopes to continue for twenty more. He has mated six pens, from which to sell eggs, and mails mailing list describing each.

S. G. Hoke & Son.

At Spring Forge, Pa., we saw the plant of S. G. Hoke & Son, breeders of all varieties of poultry, bantams, pigeons and water fowl, a total of nearly seventy breeds and varieties. This was our first introduction to a plant of this kind, and needless to say, we went prepared for any kind of a surprise, and we were grandly surprised at the amount and variety of stock seen there. We had to be shown, and in charge of Mr. Herman Hoke, whom we have met at the shows, and who has also made a reputation for himself as a poultry judge, we were shown over the entire plant. The Orchard Poultry Farm, as this plant is known, was established about twenty years ago, and now comprises 170 acres, devoted exclusively to poultry. While they have three long houses here they really are inclined to the double colony house plan on account of the range desired for both breeding and growing stock. These houses are distributed all over the farm, and are moved about to supply fresh ground twice a year, which surely is the best possible method in growing the best quality of vigorous birds. All houses are clean and comfortable and practical, the special bantam house was a feature, each pen having a separate long runway.

The birds seen here gave every evidence of proper care. Their general condition was good to see. This, with the grand quality shown in all varieties, both in form and color and markings was really delightful. Here were the Plymouth Rocks and the Wyandottes, the Orpingtons and Brahmas, the Leghorns and Minorcas, the Polish and Hamburgs, the ducks and geese, each shown in elegant condition and form, and with as careful breeding as experience will teach. While all pleased us, we will make only special mention of some that are favorites and still rare in this quality. The S. L. Wyandottes bred here are of the choicest kind and Mr. Hoke sold several of these lately to go to Germany. Their display and winning at the late Williamsport show was a feature, and in these in particular we thought they exhibited as good as we have seen. Dark Brahmas, another old favorite, are bred here at their best, and by the amount of stock seen here, and with the assurance of Mr. Hoke, believe they are as popular as ever. Their color and markings stamp them one of the most beautiful of all varieties. Here were also several choice matings of Orpingtons in all varieties. The Buff and Whites are fine, but in the Blacks there is for us a real fascination; their extra size and solid color appeals to us, when shown right, as they are here.

In Polish and Hamburgs this line is extra strong, their record of winnings prove all their claims for them. The W. C. Black Polish are a thing of beauty, with always a demand for good birds. We will remember their exhibit at Williamsport, where, in a very good class, they made a clean sweep. Their first prize cockerel was fit to win at any show.

In Bantams and pigeons their line is complete, as are also the varieties of geese and ducks. Here is a poultry show all by itself, every day in the year. Your hobby can be found here, and found in show shape and quality. The man who can manage such a plant is a genius; he

must know everything in and out of the book, and when success, as is in evidence here, is seen, then we are willing to take off our hats and give credit to the man for his work. Their record of winnings are as long as their years of breeding, and to give our readers an idea of what they are, will refer them to the last Hagerstown show. Those who have followed the poultry papers know the competition there. It takes the best to win. There Mr. Hoke won 140 first prizes and fully as many second prizes. This was the largest exhibit and largest win ever made at Hagerstown. Their descriptive mating list for the asking.

The Newtown Producing Company.

Newtown, in this case, means Old Town. It has been on the map since the days of William Penn, in fact it was William Penn himself who built the first house here. This place has also other historic value. Its hotel is built of brick imported from England some over 150 years ago, and here General Washington stopped after his retreat through New Jersey. Just west is Valley Forge where the revolutionaries spent the dreadful winter with much suffering and death, and a short ways north is where Washington crossed the Delaware on that Christmas eve years ago, that proved the turning point of the war that gave us independence.

There is more history being made there now that will also be of some special interest to our readers. The Newtown Producing Company, Newtown, Pa., have become pretty well known during the past three years. They are specialty breeders of S. C. White Leghorns and have one of the best and most practical plants we have ever seen or expect to see. The laying house is 50 by 250 feet, divided into five pens of 50 by 50 feet each, with 600 layers in each pen. There are two breeding houses; a brooder house, of 4,000 chick capacity; two incubators (Hall's Mammoth), with 20,000 egg capacity, and upwards of seventy-five colony houses.

In these buildings, and in particular in the large laying house, we noted features that were new to us, and which really require special space and mention. We also wish to show illustrations of these, and think best to hold until we can get cuts, etc., and to then give a special article on these buildings, etc.

The breeding houses and stock were of special interest to us. Here were seen the selected breeders, also their winners at the late Philadelphia Show, the first prize cockerel, who also won special for best Leghorn at the show, was grandly mated. We think him better today than at the show. He has grand size, is snow white, and of beautiful type. Next heading a pen of hens was a full brother, with the same grand character and fine head. Then came the second cock at Philadelphia, to see him is to admire, his sound color, with strong red eyes, etc., are a feature of this whole line, laying, as well as breeding stock. There was seen the third prize cockerel and the first prize cock, these, with other winners down the line, were all of the same quality. The size and shape of these Leghorns was grand to look at. Head points, extra good, and, above all, tails; carried well back, full and finished. It was the same story in each house, vigor evident everywhere. Every chick at its best, and when we were finally led into the egg room we saw only that which could be expected at a plant run in this way—viz., a heaping full larder.

Large as this plant is, they are unable to supply the demand for day-old chicks, and we look for an increased plant for next year. With sixty acres of land, splendidly located, they still have space to enlarge. As Mr. Watson told us that they are also unable to supply fully the call for eggs for hatching and breeding birds. Their sales of breeding birds alone for last year was 12,000 head, the results have exceeded all their expectations.

This plant is modern and complete in every detail. The stock is of the best and we are free to say that it will be of advantage to every breeder who can, to go there himself, and see what there has been done in the poultry line under the care of Mr. H. L. Watson.

The Afton Farms.

At Yardley, Pa., we met Mr. S. B. Twinning, and we can well add, "the man who does things." The Afton Farms are one of the largest in our country. Here are bred Barred Rocks, S. C. White Leghorns, White Wyandottes, Cornish Indian Games and Mammoth Imperial Pekin ducks. For thirty-one years this plant has been devoted to poultry, and now, with an annual capacity of over 50,000 birds, it is running full time, to its utmost capacity. In all this long time the poultry business

Hens Produce Honest Eggs

Geo. H. Lee produces honest incubators and Brooders. His 1910 Mandy Lee Incubator removes guesswork from hatching. The poultry raising industry has greater possibilities than ever before. It's profitable on small or large scale. Experience not necessary—just follow directions. Lee's "Chicken Talk" is a book written by Mr. Lee, himself. He wants you to have a copy, and his 1910 Incubator and Brooder catalog. Both FREE. Write today.

Vice-President

GEO. J. CHARLTON,
General Passenger Agent
Chicago, Ill.

has met all conditions, and has prospered; never more than right now, and with the future most promising. Here every detail of successful poultry breeding has been worked out, the feeding question included, and today all runs smoothly, with the future assured.

They do some things differently at Afton Farms, and are original with all. Using seventy tons of oyster shells yearly, they buy them fresh and crush them as desired, and with additional value. Here also yearly sixty tons of grit and some over 100 square yards of river sand is used. Celery, fresh ground on the place, is one of their staple feeds for the ducks, and dry bread is fed to a great extent to the young stock. Twenty-five men are here employed. Each has his work to do, and Mr. Twining sees that it is done, and done right. His ambition is only equalled by what he accomplishes every day.

The incubator capacity here is 15,000 eggs. The brooder house, with its runways and arrangement, is very complete. The breeding houses are all of the colony plan, while the laying houses are ample, roomy and all from first to last clean and in the best possible condition. Mr. Twining is now building and improving on another farm, a mile away, which in time promises to be the largest in the world. The feed and cook houses as well as the killing house, impressed us greatly. Ducks are killed at ten weeks old, when they average from five to five and a half pounds each. They are all dry picked, the feathers sold bringing upwards of \$1,000 per year.

Capons are also a feature here. Yearly 5,000 are produced that sell as high as \$3 each when properly grown. Day-old chicks and eggs for hatching finish the line, and the demand made on Afton Farms yearly for breeders, chicks and eggs is really beyond their capacity and desire to fill. We were not at all surprised at this condition after inspecting their stock. They have surely given their birds the closest and most careful inspection from a quality viewpoint, but this is not all. Here the egg records by the months are kept in every house and pen, and we saw enough of these to convince us of the practical worth of this line.

The Barred Rocks seen here were of a quality good to see, size and form the feature. The same can well be said of the other varieties. All stock showed choice breeding and the best of care. This was the first place where we have seen the Cornish Indian Games bred in quantities and for practical purposes. They, too, the records show, are layers under proper conditions, and the quality of their meat, with extra supply of breast meat, has never been questioned.

The S. C. White Leghorns were of extra size, a feature, Mr. Twining assured us, he liked to see. Strong red eyes, with good combs and pure white color were also noted, making a most desirable flock. We spent a full day here, finding Mr. Twining as interesting to us as was his place and plant. He is a practical fancier and we feel that our stay was of unlimited value to us in our work. We hope in the near future to give our readers more of the Afton Farms and its owner, and we would advise that all interested in his varieties get his catalogue.

Mr. John W. Poley.

At Royersford, Pa., lives John W. Poley, the man talked about, and in particular when Buff Rocks are mentioned. We met Mr. Poley just after his shipping an order of Buffs to England, and the smile on his face was nearly as broad as is the circle of his friends. Mr. Poley has bred Buff Rocks for fifteen years. He is one of the original few who have stood true and his success is well earned. The record he has made reads much like a fairy tale, but in this case it is a true tale. At the three late National Club shows they have won three first prizes. Two national championship cups and first display at all of them. Nine first prizes were won at the three last Madison Square Garden Shows, New York, and first prize breeding pen every time. This record needs no further comment from us. Think it over.

We spent a day here looking over his birds and then found it difficult to tear away. The Buff, when produced as shown here, have an attraction not fully understood, and when we had finished our desires led us all over the yards again.

One of the first pens we met was headed by Gold Chief 1st, the winner in first prize pen at New York, 1910. This pen, as one writer well put it, was the sensation of the show, the females here are also winners at New York of either a first or second prize. This Mr. Poley calls his "special" mating. It surely is one of rare quality; every bird is a gem, and results will be had here.

COLUMBUS, IND.

White Quill White Wyandottes and S. C. Leghorns

MR. FANCIER—Do you know and realize that WE have supplied the winners to discouraged fanciers and breeders that were once quitters but are now successful poultrymen. If you are discouraged, a trio of our birds or a setting of eggs will make your competitor sit up and take notice while you get first money. Remember they are winners in Detroit, Toledo, Ithaca, Marion, Wapakoneta, Elmore, and Sylvania. Scores, 93 to 96%. Let us book your order for eggs. Write for prices. Give us a trial. WE CAN PLEASE YOU. Our Prices Are Right. WE HAVE NO DOLLAR BIRDS—BUT WE HAVE BIRDS OF SUPREME QUALITY.

Originator Morganville, New Jersey

Powerful Disinfectant and Louse Killer

Why pay \$1 and \$2 a gallon when you can prepare it right at home for only a few cents. For only 10c I will send you my illustrated poultry supply catalogue and complete printed instructions for preparing your own disinfectant and louse killer. It will not only kill all germs but also keep down scaly leg and lice without injury to the fowl.

Geo. Stirdivant, Box 9, Sheboygan Falls, Wisconsin

SINGLE COMB RHODE ISLAND**REDS**

Large size, good shape and color, from hen raised stock. Won 11 ribbons at Trenton. Red Bank and Orange this past season. Eggs, \$2 per 15 straight.

Elmer G. Dean : : Morganville, N. J.

Nearby we found mated the cock bird Gold Chief, Sr., who won first prizes at New York in 1909 and 1910. This fellow looked extra good to us; his condition is of the best, and with his known quality as a breeder, surely is one of the most valuable birds living. Judge W. C. Denny wrote of him: "He is one of the best ever shown. He is of choice type, weighs ten pounds, and is of one even golden buff color." His mates are eight selected females of the same high grade in type and color.

Gold Chief 2nd, second prize cockerel at New York, 1910, and winner of color special, heads pen No. 3. His winnings tell his quality. His mates greatly pleased us, for their sound even color and shape.

Mr. Poley has eight pens mated for this season, to describe one is to mention all. It is a case of "Poley" quality in each and every one, and good extra quality besides. Here we noted in particular the rare quality in strong red eyes and low straight combs, most desirable points, and in particular when they are a flock feature.

Mr. Poley has a splendid place. His entire time is given to his poultry, and with his knowledge of the breed we can most

JOHN W. POLEY, ROYERSFORD, PA.,
President of the American Buff Plymouth
Rock Club.

confidently look for further results from him. He has issued a very attractive catalogue, giving full description of his matings, and all other desired information.

The Winona Farms.

At Lansdale, Pa., was next seen on our swing around the circuit. In Mr. W. K. Wixson, the general manager, was found a practical poultryman with every demand of the fancy at heart; also, in Superintendent F. E. Steiger, a man of wide experience and a worthy care taker. Here thirty-two acres are devoted to poultry. The land lays just right, with a gentle slope to the south. The buildings here are modern, and with every convenience at hand. The incubator cellar is filled with machines, all working, and by the number of chicks in the large brooder house, it is plain to be seen they are making every effort to supply the demand made on them for breeding stock, baby chicks and eggs for hatching. Here also the colony house is in favor, they are set out in half acre plots, fenced in, and it is from these they get the best results in egg production, as well as in fertility. This has always been our contention, and to have it verified on a plant of this kind is pleasing indeed. The one feature noted here was the use of the Norwich Automatic Feeders in every pen, also out on range and in front of the colony houses. Our idea has been that this was an expensive way of feeding, but we are now ready to admit our error and from now on will boost for this feeding arrangement. The feed hoppers are filled once a week, or as often as nearly empty. This saves from three to five hours daily in time alone. Then again the chicks can feed when wanted, and as much as they need, but little feed is dropped at the time, insuring no waste whatever.

The S. C. Rhode Island Reds and S. C. White Leghorns are bred here from something over 1,500 birds. The layers and utility pens are bred in long houses, while the selected matings are all out in the colony houses on range. The R. I. Reds are of a quality good to see, and in their selected we found birds of the highest

The Economy Meat Food Co. : : Buffalo, New York

grade; color rich and shape excellent. These Reds are also their record layers, which is to their credit. Their whole stock in S. C. White Leghorns were of an exceptional grade, size of the best and pure snow white plumage. The heads of the males, as well as the strong red eyes on all birds, was notable. Red eyes denote vigor, and if any doubt this contention let them investigate.

It is very evident that at Winona Farms the stock is bred with the standard shape and qualifications in view at all times, and with this the best results are obtained in egg production, and also in fertility. Chicks were hatching here, and their strength and vigor was plain to see. We fully believe that plants run on these bases are sure to have best success. Everything here, from the manager down, was pleasing to see, and we hope in the near future to write more of this place and to print some views of this plant. Get their catalogue.

Woodlands Farm, Inc.

Iona, N. J., can boast of its poultry industry, as well as having within its limits one of the largest poultry plants of the world. Here, at least, is the largest single poultry house we have seen. It is 500 feet long by 20 feet wide. Now divided into five pens of 100 feet each that will properly house 2,000 birds. There is a great deal here to interest the visiting poultryman. In Mr. Brown, the owner, you will find a thorough man and fancier, whose work is not only devoted to his personal success, but to the betterment of the poultry business. Here we found all conditions to our liking, the stock and all buildings in most excellent shape and condition. Here Barred Plymouth Rocks and S. C. White Leghorns are bred most extensively, and it was the general high average quality of this stock that impressed us most. In the Rocks the general condition of the birds, their health and vigor, along with their excellent size and form was noticeable, and we were assured by Mr. Brown that their all purpose quality on this farm placed them in high favor. Taking the whole flock into consideration, they were also grand in color and some very fine birds should result from these matings.

At the present time the Leghorns lead even here in numbers, and the entire flock kept looked extra good to us. Here is size and splendid color. We did not see a brassy bird, the feature seen were the strong red eyes, and we were assured by Mr. Brown that only good strong eyes go with him, a weak eye denotes weakness, both in health and character (laying quality) and we know he is right in this.

Mr. Brown makes a personal inspection of the entire plant twice every day, and if anything gets by him, well, we failed to see it, or believe it can. His every interest here and his work and accomplishment are most interesting. Besides the great house mentioned there are also two houses, each 250 feet long, and colony houses and brood coops most without number. There are two brooder houses, one 150 feet long and the other 100. Here hot air is used exclusively, and the houses and chicks looked at their best. The incubator cellar, the bailer room, machinery, etc., all were in ship-shape order and running at full capacity.

Mr. Brown assured us that business was splendid, which was also evident to the writer. The demand for day-old chicks is really unlimited, and where we find a plant of this kind and size almost unable to keep up, we must then admit there is something in the poultry business for all to consider. Eggs for hatching are a close second in demand and while now they are getting about a 70 per cent egg yield, they could spare enough from orders to keep all their incubators busy.

After April 10th they will sell baby chicks and eggs for hatching at reduced prices, also some 2,000 yearling breeders will be offered. Here is an opportunity to make a start for many. They also make a specialty of selling nine-week-old pullets. Write them for circular and all information.

Oaklands Poultry Yards.

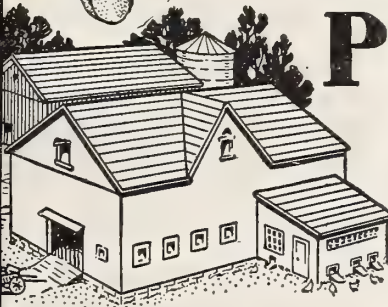

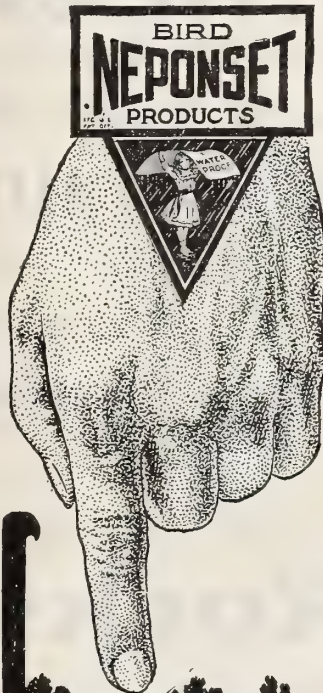

Just beyond the city limits of Trenton, N. J., and almost within view of where Washington fought the battle of Trenton, are located the Oaklands Poultry Yards, devoted exclusively to the breeding of S. C. White Leghorns. Here choice breeding and exhibition stock, baby chicks and eggs for hatching are the feature, as well as the specialty. The manager, Mr. Wm. C. Bowman, is a true fancier first, last and all the time, that he has made good is evident from the quality of stock seen here, as well as by the most excellent show record he has made. This line of birds has swept

the decks at Allentown, Easton, Trenton, etc., and last year, just to try them out, Mr. Bowman entered three pullets at Madison Square Garden, New York, in a class of thirty-nine pullets, the best ever brought together any place. He won third prize in a walk. This stock and their condition pleased us greatly. The birds are surely all at their best, and in form, type and color are extra fine; good heads and good eyes prevail. Here we noted several exceptional male birds. White as snow and with grand backs and tails full, and carried properly, the saddle feathering long running well up, and other features and qualities to their advantage.

Oaklands is a very pretty place, even in

March. The brooder house has 2,500 capacity. The incubator cellar is ideal and all houses are clean and airy. Here we also found business being done; the demand for chicks and eggs is greater than ever before, and they are running at full capacity.

In their selected matings were birds of grandest quality, strong yellow legs were noted and the general shape and style of the birds is commendable. If any of our readers ever get near Trenton, let them visit this plant, it is worth your while, and Mr. Bowman will be glad to see you. They have a very nice catalogue describing matings and giving prices and winnings. Write for one.

Our Offer: When you see your buildings, if you are not satisfied tell us and we will send you a check for the full cost of the roofing and the cost of laying it. Back of it all, if any BIRD NEPONSET PRODUCT ever fails because of defective manufacture we will replace it. If a broader guarantee than this could be made we would make it.

"The Index Finger"

Our Salesmen's Strongest Argument

Wherever our salesmen go, they can point to Paroid Roofs, that have made good—that have stood the wind and weather, for 6—8—12 years.

We say to our salesman, *point*.

We say to you, *insist on being shown*.

We have been making roofing for twenty-five years—the oldest firm in this line of manufacture, long enough to have studied every detail in the business and to have seen our products approved and tested by years and years of use in the coldest as well as the hottest climates.

PAROID ROOFING

Ask your dealer to show you a Paroid Roof and give you the name of the owner. Should he not handle Paroid write us and we will tell you where you can see a Paroid Roof and who the owner is.

Look at the roof. Consult the owner, then remember that in purchasing BIRD NEPONSET PRODUCTS you are to be the final judge, they must satisfy you. Read the offer.

Are You Building or Repairing?

Our Building Counsel Department, whose experience extends over structures of all descriptions, is placed at your disposal. Give us full particulars of whatever work you have to do and we will gladly give you, free of cost, expert advice on all building and roofing questions.

If your dealer does not carry Bird Neponset Products write us.

S. C. BUFF ORPINGTONS

Winners of 1st cock, 1st hen, 1st cockerel, 1st pullet and 3d pen, cup and display at the great Missouri State show, St. Louis, December, 1909. Also four out of a possible five firsts, Ill. State Fair, 1909. Booking egg orders.

L. H. Eldridge - Box A, Bradford, Illinois

H. E. Cole's Reds.

While we did not meet Mr. Cole (he being away for the day), we saw his birds, which is next best. Mr. Cole breeds single and Rose Comb Rhode Island Reds, having three matings of each. His winnings the past season at Trenton, Paterson, Bridgeton, etc., where with fifty-seven entries he won fifty-one regular prizes, two silver cups and eighteen special prizes, speak highly of this line. Of the above prizes twenty-four were first and fourteen seconds. The birds looked excellent to us, strong in color and of fine size and shape. Head points also were fine. We hope next time to meet Mr. Cole and write more of him and his birds.

J. S. Haupt's Orpingtons.

At Easton, Pa., we traveled by electric car up over the hills to the promised land beyond, when we were also gladly received by Mr. J. S. Haupt, the well known breeder of Single and Rose Comb Orpingtons in black, white and buff.

Mr. Haupt has been breeding Orpingtons for eleven years. He was one of the first to take them up and has stuck ever since. The fancy owes much to this man, starting, as he did, in a very small way, overcoming all obstacles, and with the foresight to see and comprehend the future, he sailed out to make a reputation and fortune. He has made the one, and is making the other.

This man and his work greatly interested us, for he is one who does things. He is the originator of all his line of Rose Comb Orpingtons, and with his study and knowledge of the breeding game we look for other results far reaching in effect. We find in his catalogue, with introduction, the following, which we copy, so the reader can better understand this man as a fancier.

Here each variety of Orpingtons are bred in separate houses, most of them in colony houses, each with a half acre run on good sod land, all buildings are up-to-date, and in fine condition, and as for the birds, we never saw a healthier flock. The reader can best understand the size of this plant and the business done here when they know that 2,000 breeders are kept here in most approved fashion, and with all this the capacity will have to be increased, as they even now have had to refuse several large orders for eggs, stock and baby chicks.

To write up the stock we saw here is almost impossible, but we will make some selections for special mention. To all, we would say, send for Mr. Haupt's catalogue and mating list. You will find it reliable with further information.

In White Orpingtons, pen No. 1 is headed by cockerel winning at the late Washington, D. C., show. A beauty, weighs over ten pounds, grand color and ideal type. As good a comb and head as we have seen on any Orpington. His mates include three famous winning hens and five others that are close up in every quality. Pen No. 2 is headed by the Chicago and Allentown winner (cock), a proven breeder, also finely mated. Pen No. 3, by second Washington cockerel. Pen No. 4, by first cockerel at Philadelphia, 1909. All these properly mated. Every one select. There are three pens mated of R. C. Whites headed by Chicago and Allentown winners. All these have the true Orpington type and choice color.

In S. C. Blacks, we saw five pens, here the prominent feature was size and type, very closely followed by sound color. Pen No. 16 is headed by first Washington cockerel, one of the best, and in the other pens are first Allentown cock and other winners and birds of this line. These are all selected matings. Mr. Haupt mates for quality only and the matings are small but extra choice. In R. C. Blacks there are three matings, choice in color and of fine type. The heads and combs of these birds were of special quality, all well done.

There are five pens of S. C. Buffs. They are a treat to see. The even shade of color a feature. Here we saw several noted winners, and others of same breeding, and of the best quality, making a collection of rare birds, good to see and better to own. The males heading these pens are of the best, several winners. The first Easton cockerel, the first cock of the Penn State show at Allentown, etc., are here with type and color. Serried tails, clean wings and beautiful head points, the features seen. The females in these matings are all we could desire. In pen No. 30 was seen Mr. Haupt's famous hen, "Sue," winner at twelve leading shows. Her type and characteristics are seen in all this line, and no better can be expected. In the R. C. Buffs there were four matings, in general quality these averaged up with the S. C. Buffs. The same style, shape and color and very fine head points.

This whole line of birds greatly pleased

PRACTICAL REDS

RIDGE VIEW FARM

THAT'S it—Practical Reds. The kind that lay eggs like a Leghorn and make a roast like a Rock.

We have the best strain of Practical Reds in the U. S. We sell eggs that hatch. Send \$6.00 for 100 eggs from utility pens or \$10.00 for 100 eggs from selected pens. Get your order in now—don't wait until the last minute.

After years of careful breeding we are giving the fancier an opportunity to buy from our best stock at an exceptionally low price.

A. G. CLARK, WILLOUGHBY, OHIO

us. Mr. Haupt's success is assured. His work has met with approval and he has the confidence of a host of customers and fanciers the world over. His incubator capacity is 12,000 eggs. The increased demand for Orpington baby chicks compelled him to double his plant this year. It has grown year after year from a very small beginning to its present size, and the future is sure to demand more from him.

The Wilderness Poultry Farm.

At Egg Harbor City, N. J., is located the Wilderness Poultry Farm. If ever a place was well named, this is it. The plant is located in the wilderness, and on our drive there and back we begged the manager, Mr. W. A. Parcels, not to drop us out, for there is no return from there unless you know the way. The office, brooding and incubator buildings are located on the State road and only half a mile from town. This entire plant is devoted to White Wyandottes. It has incubator capacity of 20,000 eggs, and now over 5,000 chick brooder capacity. The breeding houses are all of the colony plan, each with an acre of fenced-in land that is really brush, and just the place for chickens, in particular white birds.

Mr. Parcels is a fancier and breeder of wide experience. His success is best seen by improvements and the doubling of the plant in capacity. Sold ahead is the word here, as in other places.

The stock here is of excellent type and size, several of the males seen here are fit for any show. The egg record of these Wyandottes interested us, and in particular the showing made since last December. This equals any we have seen. We hope to call there again when improvements are complete and more time warrants, to write this plant up fully.

Rancocus Farms.

At Browns-Mills-in-the-Pines, N. J., are the yards of the International Poultry Sales Company, Mr. J. M. Foster, manager. This plant is not a small one by any means, they now have sixteen houses, each 150 feet long, housing 350 S. C. White Leghorns, and are building ten more houses of the same size. When completed, they will have from 8,000 to 10,000 layers on the place. Here are eighty-six large-size incubators, with a 30,000 egg capacity, run by their own acetylene gas plant of 500-light size. Breeding birds, fresh eggs for select trade and baby chicks are the features here. It is rather difficult to fully comprehend the real size of a plant of this kind, and we hope to give further information in the near future.

Mr. Henry D. Riley.

We again had the pleasure to visit Mr. Riley at his home at Strafford, Pa. Somehow the Barred Plymouth Rocks have a great fascination for us, and we are always willing to go miles to see them. We wrote up this plant in our last issue, and our return there only further impressed us with the value and quality of this line of stock. Interested breeders should have Mr. Riley's catalogue, giving a description of his matings, winnings, etc.

With Mr. Riley we also visited the plant of Mr. Robert Baker, of Stafford, Pa., also breeder of Barred Rocks. Mr. Baker, as well as Miss Baker, are enthusiastic fanciers, and have several grand pens of Mr. Robert Baker, of Devon, Pa., also in 1910 they won first prize on hen at both, and other prizes and specials.

Samuel D. Goucher.

At Moorestown, N. J., live other Barred Rock fanciers in the persons of Mr. and Mrs. S. D. Goucher. We don't really know how long this "firm" has been doing business, but that they have been very successful is evident from the stock seen here, as well as from the winnings they have made at Philadelphia, Williamsport, etc. They have a grand place, finely located and, judging from the stock, they will be heard from in the future.

Mr. J. D. Koons,

Of Trickler, Pa., is one very interesting breeder. His line is White Rocks and Buff Wyandottes. In each he has splendid matings, we may well say exceptional. The White Rocks excel in size and shape and have extra clean color. In Buff Wyandottes we saw three extra fine pens. The clean buff color, with sound tail and excellent type a feature. Mr. Koons is president of the Penn State Branch A. P. A., is well known and popular at home and among the breeders.

Mr. Howard E. Seaver.

At Browns Mills-in-the-Pines, N. J., is the poultry plant of Mr. Seaver, devoted exclusively to S. C. White Leghorns. His plant is of from 4,000 to 6,000 bird ca-

capacity, making a specialty of fancy eggs for market and baby chicks. Here a large Hall incubator is used and this is, we thought, a most practical plant for best results. The stock seen here in both laying and breeding houses was of fine quality, as were the egg records obtained. Here also we hope to visit again and give complete mention.

BIDDY'S REVENGE.

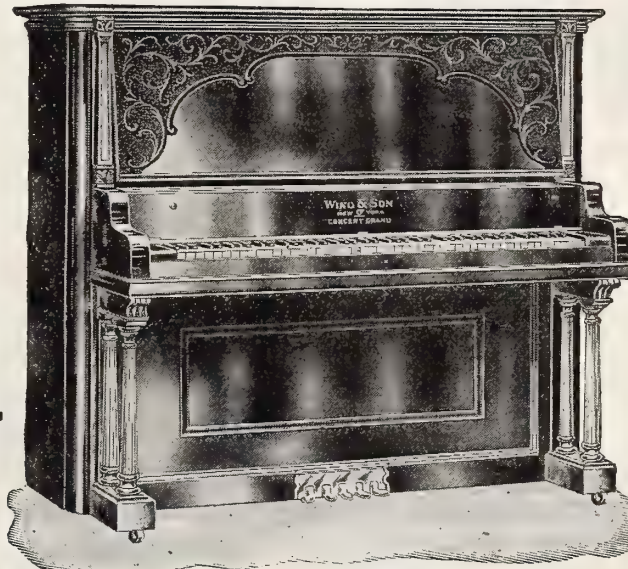

"Mis' Jones she threw some slop on me—She's jest as mean as mean can be, But I'll git even with her yet An' do it mighty soon, you bet. When she has all her friends to tea An' wants some eggs right fresh from me, I'll hand her one I've had with me Since May or June of ninety-three. I'll send it tied up in a shell All clean an' fresh to hide the smell, An' what she'll say about me—well, 'Twould never, never do to tell. She'll find it is a shame, you see, To slam slick slop all over me!!!"

Orchard Farm, Bloomfield, N. J., breeders of Single Comb Buff Leghorns, during 1909 and 1910 won 21 first prizes, 16 second prizes, 17 Buff Leghorn club ribbons, 10 special ribbons and three silver cups, at Orange, Rutherford, Red Bank and Madison Square Garden, in competition with the best breeders of the east. They have three extra good pens mated and will supply a limited number of eggs at reasonable prices considering quality of stock. If you want something extra good write and mention American Poultry Journal.

C. E. Spaugh, Rugby, Ind., the man who has been creating such a stir in Barred Rocks during the past few years, with the grand specimens he has been producing, is making a special offer on a few of his this season's breeders. This is an opportunity for our readers to get some extra choice specimens at bargain prices. Mr. Spaugh is a man that will treat you right. Better write him today for full particulars and mention American Poultry Journal.

Rock-Bottom!

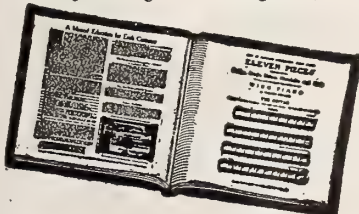

Yes, Rock-Bottom Prices and on a Piano of the HIGHEST Quality

Let us quote you the most astounding prices ever offered on pianos of unexcelled quality. The very rock-bottom prices—prices that would mean ruin to the local dealer or the mail-order houses that buy their pianos from the manufacturer. You will be amazed at the direct-from-the-factory prices on the well-known Wing Piano. We will positively save you from \$150 to \$250 on the purchase of a piano of highest quality, recognized merit. We offer to convince the purchaser by slipping your choice of a piano on approval, all freight prepaid, no money down—absolutely free trial—a four weeks' free trial. Remember: all freight charges prepaid, no matter whether you keep the piano or not.

Send for Book of Information FREE! the best, safest, most instructive book of piano-buying information ever compiled; the

Would you like to know all about pianos, how they are made, how to judge the fine points of quality and price in buying a piano? Then send the coupon for the piano book which we are sending out FREE for the present—the book is free.

The Coupon Brings this 156-Page Book Free

formation that may mean hundreds of dollars to you, whether you buy a piano now or later. Put your name on the coupon and mail it to us AT ONCE.

WING & SON, Est. 1868, 373-386 W. Thirteenth Street, New York

So many of the new style Wing Pianos are getting into homes where the people buy for all cash, that dealers are trying to tell it around that Wing & Son REFUSES to sell on time. This is not true. We sell for cash OR on VERY, VERY EASY PAYMENTS just as YOU choose after your four weeks' free trial. And many of our wealthy men are buying Wing Pianos right now on our easiest monthly payment plan.

Every discount goes direct to you

The Wing Piano stands alone—sold direct from the factory—the only one sold direct from an exclusive piano factory without going through the hands of a single middleman.

When you buy a Wing Piano you pay no salesmen's, dealers' or middlemen's profits. You pay no commission to music teachers and supposedly disinterested friends. We cut out all middlemen and you put the discounts in your own pocket. The piano book tells how to save from \$150 to \$250!

This book (156 pages) tells all about material, manufacture, assembling, patented devices and what they do, all about soundboard, action, case, in fact every detail connected with the production of a fine, high grade piano. You will be astonished at the amount of information about piano quality and piano prices, and how to avoid the deceptions of piano salesmen. The New York World says, "A book of educational interest everyone should own." With this book we send our direct-from-the-factory prices on Wing Pianos.

ESSO RE-CARBONIZED CHARCOAL for CHICKENS

Makes Them Healthy

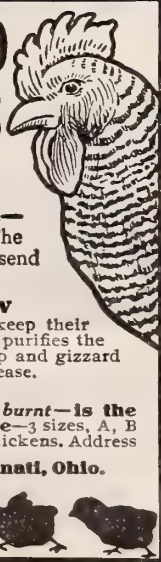

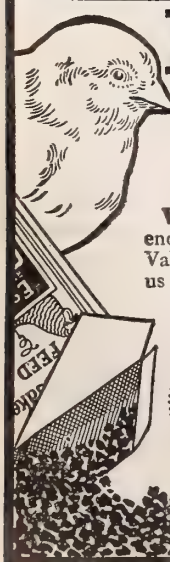

We will send you a free sample package—enough for a fair trial—and free instructive booklet, "The Value of Charcoal in Poultry Raising," if you will send us your local poultry supply dealer's name.

Money-making poultrymen know

the absolute necessity of charcoal as an absorbent to keep their birds in healthy condition. It regulates and purifies the bowels, absorbs the impure gases of the crop and gizzard—prevents sour conditions, which breed disease. It makes the flesh sweet and tender.

Esso Re-Carbonized Charcoal—twice burnt—is the purest, most absorbent and best made—3 sizes, A, B and C, for young, half-grown and full-grown chickens. Address

The S. OBERMAYER CO., 641 Evans St., Cincinnati, Ohio.

HOW TO REDUCE LIVING EXPENSES.

Hundreds of New Ways to Prepare Food Economically.

Statistics prove that the cost of living has steadily increased, and will continue to increase. At the same time the wage scale has not grown proportionately large enough to offset this. There is but one thing to do when confronted by a situation like this and that is to reduce the cost of living. Economy must be practiced to make ends meet. Many of the little luxuries that have been enjoyed of course can be stopped with slight inconvenience.

The real pinch comes when an attempt is made to tamper with the table. The proper amount of food must be eaten. This is the largest household expense and the one turned to naturally when the question of economy is raised.

Now the easiest way to make a saving is to use the remains of the roast beef, the chicken or turkey, the shoulder of mutton, or many other things that heretofore were thrown away. It is just here that the woman who has an "Enterprise" Meat and Food Chopper in her kitchen is able to run her household economically. It makes possible hundreds of new ways to prepare food. Economizing by skimping the table is not necessary, as the chopper reduces waste to a minimum.

The "Enterprise" Meat and Food Chopper cuts—not crushes—meat, fish, vegetables, fruit or any food that will go through it. Many dishes that housewives have seldom made because of the trouble attached are easily prepared. New ones that they have hesitated to try are now within their reach. A turn or two of the handle and the article is cut—and the advantage over the old time-consuming methods clearly shows it to be a household necessity.

"The Enterprising Housekeeper" is a valuable little book containing over two hundred recipes of which every housekeeper should have a copy. The publishers will be glad to mail a copy to any address upon receipt of 4 cents to pay postage. Address The Enterprise Manufacturing Company of Pennsylvania, Dept. 33, Philadelphia.

THE MAN WITHOUT A HOE.

We do not wish to rob "The Man With the Hoe" of either a jot or a tittle of his glory. When one considers the labor he puts forth in tending to his small gardens, and the fewness of the dollars that usually come back to recompense him for his toil, no one will seek to rob him of the halo of glory with which the poet has invested him. He should have something for his trouble.

But after all it is the "dear old honest dollar" that means comfort and satisfaction in this world, and we would rather be the modern man without the hoe, but with up-to-date, labor saving, crop producing tools and implements, than to be the old-fashioned, hard working "man with the hoe" and all his glory.

The hoe as emblematic of the market gardener of today is distinctly out of date. It belongs to yesterday. The man of today has his set of garden tools that enable him with much less labor to tend more ground in a better manner, and with much bigger crops to the acre. This is called particularly to our mind by the arrival of a little booklet which fully describes the complete line of Iron Age Garden tools.

Perhaps, among all their tools, the one most serviceable as an all around garden tool is their famous No. 6 Iron Age Combined Double and Single Wheel Hoe, Hill and Drill Seeder. It combines in one three distinct and thoroughly practical implements. But they have tools adapted to every purpose. These tools enable the farmer to take care of his garden in a better manner with less time; and the yield is substantially increased by this thorough cultivation.

Our readers should write for this little booklet which, in addition to describing their tools, gives some valuable garden hints. It will be sent free on request to the Bateman Manufacturing Company, Grenloch, N. J., makers of Iron Age Tools, to those mentioning this paper. Write today.

Tyler Cruttenden, Norwich, Conn., breeder of Single Comb Buff and Black Orpingtons is sending out a very neat mating list, giving list of winnings and description of pens he has mated for this season. Write for a copy and mention American Poultry Journal.

CLASSIFIED ADS

UNDER this heading ads will be inserted for six cents per word each month for less than three months, and **four cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under **classified headings.** No ads accepted at less than an average of fifty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J.

ALL COPY FOR CLASSIFIED ADS MUST REACH US BY THE 19th OF THE MONTH PRECEDING DATE OF ISSUE

S. C. WHITE AND BLACK ORPINGTONS. Eggs, White, \$3, \$2; Black, \$2.50. Dr. Thos. Dedrick, Washington, N. J. 5-1

WHITE ORPINGTON EGGS FOR HATCHING. Pen No. 1 headed by that grand big cockerel that won 1st at the great 1910 Philadelphia Show. This cockerel is a wonder in type; big, broad, long back; deep, full breast; extra short shank, and is the best White Orpington I could buy at any price. Mated to four hens that I believe are equal to any four hens owned by any one breeder in America. They have the true Orpington shape, very deep bodied, deep full breast, extra short in shank. Will spare a few settings from this grand pen at \$10.00 per 15 eggs. Pen No. 2 headed by one of Mr. Kellerstrass' best birds, mated to ten extra low down, grand type hens, the kind you are all looking for. Eggs from this pen, \$3.00 per 15 eggs. I paid Mr. Kellerstrass \$30.00 per setting for these same eggs. Ten years a breeder of Real Orpingtons. Member National White Orpington Club. Member first Orpington club of America. Ed. Biederstadt, Majestic Theatre, Madison, Wis. 5-3

CRYSTAL WHITE ORPINGTONS, Kellerstrass strain. Eggs from best mating, \$3.00 per setting of 15. Securely packed. Satisfaction guaranteed. Harvey R. Brown, Lock Box 441, Highmore, So. Dak. 5-2

S. C. BUFF ORPINGTONS. Cook Strain. Yard one is headed by a grand cockerel, score 92½, weighs 10 pounds, mated with seven grand hens, selected for size, type and color; \$2.00 for 15. Yard two consists of 10 fine pullets, headed by a beautiful colored cockerel, score 92½; \$1.00 per 15. Ernest Sanderson, Baraboo, Wis. 4-3

FAMOUS "DUKE OF KENT" Black Orpingtons. Big, low, blocky birds, true to standard. Wonderful layers. Settings low price. Kenilworth Poultry Yards, Holyoke, Mass. 5-1

CRYSTAL WHITE ORPINGTONS, "Kellerstrass strain." Eggs at half price or \$1.50 per 13 after May 1. Edw. M. Longmore, Somers, Wis. 5-1

S. C. WHITE ORPINGTONS, large, vigorous birds, best layers. Ribbon winners. Eggs from best pens, \$2.00; second pens, \$1.00 per 15. S. S. Kanaga, Taylorville, Ill. 5-2

BUFF ORPINGTONS.—If you are intending to buy Buff Orpington eggs for hatching it will probably be very much to your advantage to send for our Mating List, before placing your order, because we make some strong claims about our eggs, that are likely to interest you. You can judge from this Mating List, whether these claims are likely to be true or not. Anyway, send for it, and then decide where to buy. Our young stock is reared on free range on our 140-acre farm, and all our fowls are housed in fresh-air houses, insuring health, size, vigor and laying qualities. Forty-five prizes on our Orpingtons last winter. Our Buff Orpingtons are phenomenal layers. Whatever you do, send for our Mating List. Grannis Brothers, R. F. D. 12, Lagrangeville, Dutchess County, New York. 1-10-1yr

S. C. BUFF ORPINGTON EGGS—Cook's, Williams' strains, \$1.50 per 15; \$7 per 100. L. M. Voorhees, Jerseyville, Illinois. 5-2

Send 10c for Black Orpington Club Catalog, containing colored photograph of Black Empress, greatest hen that ever lived. Send 25c for year's subscription for Orpington Magazine. Milton Brown, Cheviot Farm, Cincinnati. 5-3

CLOSING OUT SALE—S. C. Buff Orpingtons, 10 pullets and 1 cockerel. These are excellent colored stock, up to weight, and good Orpington shape. Am selling them in order to breed the S. C. White Orpingtons exclusively. Pullets, \$2 to \$5; cockerels, \$8. Satisfaction guaranteed. Mackey's Poultry Farm, Nevada, Iowa. 3-10-1f

ORPINGTONS.

WHITE ORPINGTONS.—May and June are ideal months for hatching. In our White Orpington eggs we offer Great Quality at very reasonable prices. Our young stock is reared on free range on our 140-acre farm, and all our stock is housed in fresh-air houses, so that we get the finest result in health, vigor and size. Lots of prize-winners in our breeding pens. Forty-five prizes on our Orpingtons last winter. None but heavy layers in our pens. You may not do yourself justice unless you send for our Mating List before buying eggs. We claim to give greater value in our White Orpington eggs than can be obtained elsewhere. Anyway, send for our Mating List, and see how we substantiate our claim. Grannis Brothers, R. F. D. 12, Lagrangeville, Dutchess County, New York. 1-10-1yr

WORLD'S BEST ORPINGTONS. White, Buff, Black, Single, and Rose Comb. Winners of over 1,200 prizes at America's best shows. Catalogue. We can start you right with chicks or eggs. J. S. Haupt, Box 97, Fairview Farm, Easton, Pa. 5-3

THE EGAN POULTRY FOOD CO.
Jackson - - - Michigan**Let Steinmesch
Tell You How**

Everybody who knows chickens knows Steinmesch. I know how to raise more chickens and better chickens, to get more eggs and better eggs and how to get more money for both. I know how to pick out and breed fowls that pay in poultry and eggs and win in the show room. I ought to. I have been at it for 30 years and own my own complete farm. I fed and looked after 10,008 fowls at the St. Louis World's Fair, the largest poultry show ever held in the world, and I am a Life Member and Member of the Executive Committee of the Am. Poultry Association, President S. W. Branch Am. Poultry Association, Pres. Silver Wyandotte Club of America and the St. Louis Fanciers Association and Member of the Missouri State Poultry Association.

Now I'm Going to Tell What I Know FREE I am going to give others the benefit of what I have learned. I am going to offer plain understandable suggestions to those who want to know how to make the most out of their poultry. This information is not for sale. I'm going to give it to you and show you how to really make money in poultry. I will send the whole story of my success and my methods to you in handsome book form without one penny from you. Just send me your address and say: "Steinmesch, tell me how." Address Henry Steinmesch, President 211 Market St., St. Louis, Mo.

FOR SALE: Breeding and SHOW BIRDS, both old and young, bred from these same lines of New York and Boston First Prize Winners. We also make a specialty of furnishing Carefully Mated Trios and Pens for breeding Exhibition Cockerels or Exhibition Pullets.

TESTIMONIALS

Seven First Prizes—1½ Settings

One year ago last spring I got one setting of pullet mating eggs from you, and later the same year a mixed setting, part cockerel and part pullet mating eggs; out of the first hatch I picked three choice pullets and one cockerel; out of the mixed hatch I picked one fine pullet. I showed the five at our Fair; won 1st and 2d pullet, 1st on cockerel, 1st on breeding pen. At our Ashley Poultry Show with these birds I won 1st on cockerel, 1st, 2d, 3d and 4th on pullets, 1st on breeding pen. At our Ohio State Fair in hot competition with eight of the foremost breeders of the State I won 1st and 2d on pullet and 2d breeding pen, making more prizes than any one breeder got in the Barred Rock class. So you can see what that 1½ setting of pullet mating eggs have done both for utility and show birds. When asked what strain I have I just say "Bradley's."—E. F. Roloson, Delaware, Ohio.

I won 1st pullet at Galesburg, Illinois, January 17-22, 1910. This pullet was from a setting of eggs I got from you last spring. Her score was 93 by Judge Faulkner. You may use this information as you see fit.—S. E. Coddington, Woodhull, Illinois. February 8, 1910.

I believe my stock do you good advertising. At our Kansas State Show just closed my "Rox" in competition with one hundred seventy-five Barred Rocks entered, among which was a pen of Kansas City winners there, mine won 1st Cockerel, 1st Pen, 3d Cock and 1st Special for best colored cockerel, this made them crow quite testily for "Bradley Bros."—Mrs. J. T. Woodford. January 26, 1910.

breeders of the State I won 1st and 2d on pullet and 2d breeding pen, making more prizes than any one breeder got in the Barred Rock class. So you can see what that 1½ setting of pullet mating eggs have done both for utility and show birds. When asked what strain I have I just say "Bradley's."—E. F. Roloson, Delaware, Ohio.

HARMON BRADSHAW - Box A - LEBANON, INDIANA

Read This Ad Carefully

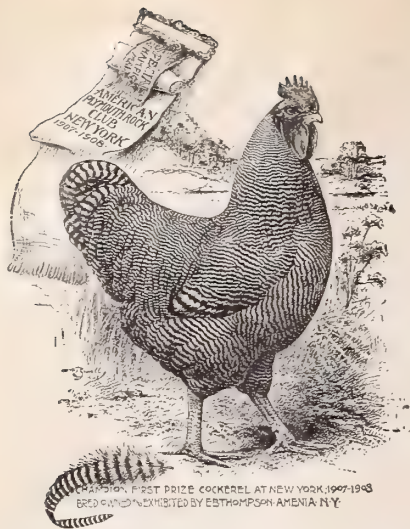

For months past I have been telling you about Lamon's Northern Raised White Plymouth Rocks—"the hardy kind"—about the constitutional vigor of my flock, and I know if you could see and handle my birds and note their large size, chalk white plumage, bright red eyes, deep full breasts, long broad backs with well spread tails, rich yellow legs set well apart, you would make up your mind to place your order with me for White Rock eggs this spring. I know you would see that it means a whole lot to have good strong, healthy birds to breed from, as they are the quick maturing kind. The winter layers and the ones to win the prizes at the best shows. I want to tell you another thing about

LAMON'S WHITE PLYMOUTH ROCKS

Their eggs hatch and the chicks live, as I don't send out eggs until they run high in fertility. I doubled my business last season and I want to double it again this year, and the best way of doing it that I know of is by making satisfied customers. Can't I have your order? Send for my circular and list of testimonials from former patrons.

EGGS from pen headed by my 4th pen ekl. at Boston, 1910, \$10 per 13; all others \$5 per 13, \$9 per 26. These are the finest matings I ever owned. I am the originator of the R. and S. C. Buff Bantams. A limited number of eggs, \$10 per 13.

HARRY M. LAMON - BOX H - ADAMS CENTER, N. Y.

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square
Garden, New York, Winters of 1908 and 1909

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection, and created a Sensation as the Finished Achievement in Modern Barred Rock Breeding.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My clean sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show birds fit to win in any competition. Richly illustrated 58-page catalogue upon request; it is full of original pictures of New York winners from life. EGGS from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18. Address

Stock and Eggs Always For Sale

A. E. MUTH : Box 129, Route 15 : WEST ALLIS, WIS.

MARY

S. C. Red pullet. Rich, even red, with black tail and correct wing markings; oblong body; the laying type to be found in the Red Raven strain.

DO YOU KNOW HALF SINGLE COMB R. I. REDS PRICE

You can now buy EGGS From ZIMMER'S RED RAVEN STRAIN at

and that they have "superior R. I. Red quality," to be found only in the Red Raven strain. We know this, our old customers know it and we want you to know it, so we are going to offer you eggs from our very choicest matings at **half price**.

Pen 1 is headed by Red Raven 6th, a bird with grand type and one even, rich, brilliant red color from head to tail. **Pen 2** is headed by Red Raven 5th, a tested sire of show birds for the last two years. We did get \$15 for eggs from these two pens; **price now only \$7.50**.

Pens 3 and 4, all fine birds, nearly as perfect as pens 1 and 2. **Price now only \$5**. Some of our customers are reporting 100 per cent fertility. Any way, we guarantee satisfaction. Send order at once. Two-color catalogue free. Stock in August.

J. G. Budde & Co., Successors to C. W. Zimmer Oak Park, Illinois

ORPINGTON SALE

Eggs Half Price After June 1

From kodak snap shot; not retouched

The Cheviot Farms announce a special sale of birds used in breeding pens this year including the **BUFFS** that won Judge Stanfield's trophy for best Buffs he judged last year at Madison Square, Chicago, National Club Meet, etc. Also some grand imported birds from the yards of four of the leading English breeders.

In **BLACKS** we offer some priceless cocks and hens of pure Empress blood to make room for our growing youngsters.

In **WHITES** we offer several hundred grand breeders including the champion cockerel of England this year, winner of \$250 challenge trophy; also Crystal Palace winning pullet, etc. Some really grand breeders at from \$5 each per bird up; also some February hatched chicks ready soon for fall fairs, etc.

Remember, we have now an English agent who will accept orders for any bird bred in England—shipment on approval and if not satisfactory you may return the birds and get your money back of us.

We are now booking young trios as low as \$10 that are fine birds. Send now for sale bulletin A-A. Also, don't forget to send 25c for year's subscription for the Orpington Magazine, or add any 50c magazine for 25c more.

Milton W. Brown, Cheviot Farms, Cincinnati, Ohio

BUFF AND WHITE ORPINGTONS

THE OLDEST SPECIALTY BREEDERS IN THE U. S.

OUR SHOW RECORD on Buffs at Madison Square Garden is unequalled—winning Silver Cup for best display, showing only 9 birds and having 7 points more than our nearest competitor. In same show also won handsome Silver Cup for best ekl. Our winnings at Chicago, where we won more firsts than all competitors, cannot be equalled.

CAN THERE BE ANY QUESTION WHERE YOU SHOULD ORDER YOUR STOCK AND EGGS?

OUR MATINGS in Buffs and Whites are the finest we ever owned, and with our long line of show producers in the past, convinces us winning specimens will be produced. Send for free mating list. We are quoting special prices to close out some grand breeding ecls. at this time. \$10 to \$15 gets a grand bird. This is your opportunity. We breed for quality, health, vigor and egg production. Write us your wants.

J. M. Williams & Co. : Box B : North Adams, Michigan

PETERSEN'S HOUDANS

THE UNDEFEATED CHAMPION STRAIN OF AMERICA

¶ Winners of blue ribbons, silver challenge cups, medals, gold specials and many other coveted honors at every noted show in the country and in the strongest possible competition. ¶ REMEMBER, no matter where you want to show, no matter what the competition, we can furnish the winners. ¶ Send for 80-page fully illustrated book on the Houdan. It gives full descriptive matters on the Houdan. "It will put you wise." Postage twenty cents. Please mention American Poultry Journal when writing.

REV. C. E. PETERSEN ¶ Pres't Am. Houdan Club from 1900 to 1907 ¶ **BRIDGTON, MAINE**

Why Do You Wait?

If you are thinking of raising chickens, or have decided to profit by other people's experience and raise White Leghorns from now on—Why do you wait?

Now is the time to begin if you want a sturdy flock of layers next winter when eggs are scarce and high in price. White Leghorns hatched in June will be laying by mid-winter.

Newtown White Leghorns

Are what you need. They are full of vitality, productive and profitable.

An ideal chicken plant, with 53 acres of splendid ground devoted exclusively to these chickens has produced a wonderful strain. We are glad to show it all to you any day, except Sunday.

WORLD'S BEST LAYERS AND PRIZE WINNERS

As results and records show—yet hatching eggs or baby chicks from this famous strain will cost you no more than ordinary birds. Order now. There's good news for you in our free booklet. Write for it.

Newtown Producing Company

S. A. Hummel, Box 52, Freeport, Ill.

**Successful Egg Farming**

Among people who can afford luxuries there is great demand for a regular supply of fresh eggs. The few growers who can furnish them regularly, Winter and Summer alike get very high prices.

The Corning Egg-Book

(entitled "\$6.41 per Hen per Year"), tells how two men, in poor health, starting four years ago with only thirty hens, made from their little egg-farm a clear profit of over \$12,000 last year. It tells all about their experience, their failures, their methods and how others men or women, with good sense, care and faithful work can make money in the same way. Not a detail left out.

The Corning Egg-Book is sold in combination with the Farm Journal, Philadelphia, Pa., and we have made arrangements to make this

Special Offer

For \$1.00 (cash, money order or check) we will send postpaid the Corning Egg-Book and the Farm Journal for two years, and American Poultry Advocate 2 years, all for \$1 if order is sent at once to

American Poultry Advocate
727 Hogan Block, Syracuse, New York

Diseases of Poultry

—BY—

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

Farm-Poultry

AMERICAN POULTRY JOURNAL is the oldest, largest and handsomest poultry paper in the world, and is conceded to be the leader in all things pertaining to poultry. It is copied by both old and new poultry publications. In fact, it has no equal. Now in its 41st volume.

FARM-POULTRY, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

WESTERN POULTRY JOURNAL, published at Cedar Rapids, Iowa, is in its 21st volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable **American Poultry Journal**, thoroughly cover the entire field of poultry literature, and make a poultry library in themselves.

THE GREATEST COMBINATION EVER OFFERED

and especially so when you take into consideration the fact that **American Poultry Journal** contains from 68 to 188 pages of interesting matter, any number of which is worth more than we are asking for one year's subscription to all three magazines. This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

FOUR FOR \$1

Four First-Class Poultry Publications Published in Different Parts of the U. S., at One-Half Price

American Poultry Journal - - - } \$1.00
American Poultry Advocate - - - }
Poultry Item and Commercial Poultry } Regular Price \$2

AMERICAN POULTRY JOURNAL needs no introduction, as it is the oldest, largest and best poultry paper in the world. Is the leader of the poultry press, and now in its 41st volume. No poultryman can afford to be without it, as it has no equal.

AMERICAN POULTRY ADVOCATE, the great New York state paper published at Syracuse, and full of good reading matter, is always welcomed by the subscriber. Now in its 18th volume. It is conceded to be one of the best poultry papers published in the east.

POULTRY ITEM, published at Sellersville, Pa. Now in its 12th volume, and although a young publication compared to the others embraced in this offer, it is safe to state that Poultry Item is rapidly pushing toward the front. Full of valuable information and complete winnings.

COMMERCIAL POULTRY, published at Marseilles, Ill., is now in its 18th volume. True to its name, it instructs the reader on poultry as a business. Its volumes contain articles by excellent writers who contribute regularly and make it interesting for the reader.

When reading this do not lose sight of the fact that American Poultry Journal contains from 68 to 188 pages of interesting reading matter; that it has a strong corps of field men who report on conditions in their territory each month so that it contains the "newsiest" news of the poultry world. A single copy is worth more than we ask for one year's subscription to all four.

\$2.00 Value for Only \$1.00—This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address

Owen Farms

THIS YEAR'S SHOWING

We do not expect to show at all this year and this means something to you. We shall govern ourselves accordingly and sell stock that we otherwise would not think of selling. Again we are preparing to make early agreements with our customers as to fitting a string for showing at the important shows, as we will not be represented. We will be glad to make our early proposition for guaranteed winners. We have been in the show room every year for six years, this last year showing over 300 birds, and we believe we merit a rest and feel that in the end we can do many things for our customers that we have not yet done. Early correspondence is both solicited and advised.

BARGAINS IN STOCK

Are you looking for bargains in stock? If so, why? Surely so you may get a good value for a small expenditure of money? Have you ever tried to carry over 150 or 200 cockerels for cock birds, from the early summer till late autumn? It is difficult to do it; takes a lot of space and is expensive. We have a large number of females in all varieties to go with the male birds. We shall not issue a bargain sheet as in previous years, but ask our customers to write us definitely just what they wish and we will quote to them exactly what we think they want. We shall make an individual matter of each and every application. Both Mr. Delano and Mr. Owen are going to devote themselves to this purpose for the next two or three months and you will get satisfaction, both in your correspondence and in the birds we offer. Please remember we cannot get anywhere unless you are frank with us and tell us what you want.

BARGAINS IN EGGS

Why are you looking for bargains in eggs? Because you want the best and are limited in the amount of your expenditure. Now, what do you have to give up in getting a bargain? I tell you not quality, not satisfaction in hatching and in fertility, in fact nothing that makes success in following years. All you give up is the time at which you can purchase. You can get breeding birds from eggs hatched in June and July, up to the 10th of August, and in quality you can get a foundation that you cannot get in any other way, and in getting our eggs at half price after June 1st from Plymouth Rocks and Wyandottes, and after June 10th from Buff. Black and White Orpingtons, you will get the best of it in quality and hatching and in the foundation stock for breeding next spring at a low price. This is particularly true of White Orpingtons, which we shall set right through, as the quality is most extraordinary.

BUFF ORPINGTONS

Nearly every one is aware what we have in our Buff Orpington flock, and when we suggest that you get into correspondence with us concerning it you will readily understand that we are looking out for your interest as well as our own. Our trade in this variety has been enormous. It is more popular than ever and we are sure that it is going to continue to advance in popularity and in importance. Our winnings in this and other varieties you can get from our catalogue and mating list, which we will only be too glad to send you if you have not received it. Males and females in this variety at all prices and one-half of our flock which we will be willing to sell any time after the middle of June.

BLACK ORPINGTONS

In this variety of the Orpingtons we have some sterling males and females. A goodly number of cockerels carried over and can spare you such as you are wishing in any quality you may name. That this beautiful, large, typical Orpington is coming more popular every day is true and you can make no mistake in getting a small foundation flock for your use as show birds during the coming winter and as breeding birds the following spring. Our catalogue tells of the origin of our stock and how successful it has been both in England and in this country, and that no one can offer better breeding stock or show birds in this variety is a fact.

WHITE ORPINGTONS

This is where we can meet your wishes after June 15th. We have and will sell some of the grandest Whites that have ever been imported into this country and have only to tell exactly what you want, the quality you wish, and the description we can give you of particular birds will certainly induce your further consideration and final purchase. There is no doubt that today we are better equipped and in shape to give you a grand pen of birds and a good start in the White Orpington than any other breeder.

WHITE WYANDOTTES

What we said above about showing means something particular in White Wyandottes. We have the finest birds to offer that any one could expect to find, and if you tell us what you wish to accomplish in the show room and in breeding, and if you are really looking for something that is particularly good and at a reasonable price, don't fail to get all the information we can give you in regard to White Wyandottes. Our first pen at New York, which you have had a chance to see in the papers recently, our winnings at Boston and New York, which were phenomenal, indicate the quality of birds we have, and we shall be glad to take up special propositions for showing in the autumn or winter, or the consideration of stock which we believe will develop into the winners. We will make you a special price at this time.

BARRED PLYMOUTH ROCKS

For Barred Rock breeders we have something especially good. A large number of females, both in cockerel and pullet matings, that are exactly what you are looking for to strengthen your string for showing and to make grand breeding birds for you for the following year. In male birds we still have a fairly large number and can give you something that will be both pleasing and satisfactory at the price. We urge you to see what we have. Our first pen at New York, which has been in all of the papers, gives you an idea of the shape and quality of birds that we can offer. We also won the first pen in the pullet mating, and in both lines we can probably do more for you, and will, than any one else.

WHITE PLYMOUTH ROCKS

On account of our enormous egg trade in White Plymouth Rocks we have a very large number of exceptionally fine male birds and females, which at this time we are ready to offer you. As near perfect in type as they grow, as white as any White Rocks in the world, and possessing the quality that in every case wins both for ourselves and our customers. We are positive that you cannot do yourself greater good than to get in touch with us promptly in relation to stock which we have to offer.

23rd and Arch Streets Philadelphia, Pa.

Twelve Months' Work in the Poultry Yard

By W. Theo. Wittman, Acknowledged by All to be One of America's Foremost Authorities and Judges

Starts you in January, and take you clear through the year—telling you just what to do to successfully handle your fowls in the safest and most economical way that is consistent with good business methods, to make the largest success possible with your fowls.

It doesn't tell you how to make two hundred dollars from twenty hens

but it gives you a short, boiled down, and up-to-date treatise on lines that are practical and can be executed with safety. The contents of this book are intensely practicable, and teach a method of poultry keeping exactly opposite to that which is complicated and unnecessary. Price 25¢ cents.

THE POULTRY ITEM

The largest Eastern poultry Journal, published at Sellersville, Pa., 68 to 140 pages monthly. Special breed numbers starts in September and continue until May, 1910. Tells you how to secure larger and more profitable returns from your chickens. Extremely helpful and valuable. Get a-going right in the poultry business. Many are making \$2.00 per hen each year. Are you? The Poultry Item will keep you posted on latest methods and poultry secrets. The Item stops when time is up. Price 50 cents the year. Order it now at the following special terms.

A Year's Subscription to The Poultry Item and Twelve Months' Work in the Poultry Yard, only 50c

Address all orders to

R. in the show. S. C. Buff Leghorns. N. Y. silver cup winning strain. N. Y., 1910, won 3d pen, 5th cock, 5th pullet. White and Pearl Guinea Hens. Circular. Write for what you want. Stock and eggs.

ROYAL FARMS - DEPT. X - LITTLE SILVER, NEW JERSEY

Blanchard's White Leghorns

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled as foundation stock or for introducing new blood. Stock for sale. Eggs for hatching from my regular matings at \$2 per 15, \$3.75 per 30, \$5 per 45, \$10 per 100; from exhibition matings, \$5 per 15, \$5 per 30. Illustrated circular free.

WINNERS AT MADISON SQUARE GARDEN, N. Y., 1903-1904-1905-1906-1907

Eggs, balance season, from best pens Columbian Rocks and Black Wyandottes, \$2 per 15, \$5 per 45.

F. M. Clemans - Mechanicsburg, Ohio

ROSE AND SINGLE COMB R. I. REDS

Winners of over 150 prizes during past 5 years in good hot classes, in such shows as Toledo and Cleveland. At the recent Cleveland show, I won 1 first, 2 seconds and 1 fourth with five entries. My circular gives you all my winnings and many testimonials from pleased customers, and will convince you I have good quality in my Reds. Will treat you right. EGGS from my select matings, only \$5 per 15; half price after June 1st. My this year's breeders, including all my winners, to early buyers at one-half their real value. Write for my free circular and mating list.

B. M. BILLINGS - BOX A - OBERLIN, OHIO

NOW IS THE TIME FOR

The Norwich Automatic Exerciser and Feeder

for growing stock and the fowls on range. Fill the hopper, and stand the machine in the shade. See that they have water and then go, attend your business. The machine will take better care of the stock than you possibly could. Saves nearly 25 per cent of the actual costs of feeding. Is positively rat and bird proof, rust proof and dust proof, and delivers only fresh, clean grain in just such quantities as you desire. Chicks will grow faster, mature quicker, and be stronger and healthier if fed and exercised by

The Norwich Automatic Exerciser and Feeder

while your waste is eliminated and the labor reduced to filling the hoppers when empty. It will cost you nothing to prove our claims. We guarantee them.

Norwich Automatic Feeder Co.

Handsome catalogue free.

Dearborn Poultry Yards, S. D. Lapham, Prop., Box A, Dearborn, Mich.

Everybody Was There

At New York 1908-10

That's the kind of competition Duston's birds want. I won first collection for the second time in three years. Winning first cockerel and A. P. A. special for best male. Shape and color specials and first pullet and many others and only lost first pen on account of an accident to the tail of the male. "I was sorry to throw down such a pen, but had to punish him for it," the judge said, and many expert judges have said that year was the best judged class in years, and certainly was one of the hottest classes ever brought together. If I had a million or two and was determined to win New York I would not be satisfied with the 2d or 3d year after year. No, not if it took a thousand dollars each to buy up half a dozen flocks. But the real enjoyment to one is to go down with a bunch of your own and WIN and reader that is the kind of stock you want. If you do and want good care write to me. Send 10c for a catalogue, stating wants in stock and eggs. 16 years a White Wyandotte specialist. The breeder who has made possible the world's best flocks.

Arthur G. Duston, Box 1020, South Framingham, Mass.

40 BREEDING YARDS OF SINGLE COMB BUFF LEGHORNS

The largest Buff breeder in the world. My birds are bred to lay. Ten pullets in 1908 averaged 222½ eggs. Each bird mated in my 40 pens is a show bird and I have over 500 of them that are the pick of over 4,000 raised last year. In 1908 I won most of the ribbons at Hamilton and the great Cincinnati show, and 2 silver cups for best display. In 1909, at Hamilton, 1st cock, 2d and 3d hen, 1st and 2d cockerel, 1st pullet, 1st pen and silver cup for best display. In 1909, Cincinnati, 1st cock, 2d hen, 2d and 3d cockerel, 2d and 4th pullet, 2d pen and special for best colored male in show. The great St. Louis show, 1909, 2d cock, 2d pen, 3d pullet, 5th cockerel. Chicago, 1909, 3d pen; showing at the above three shows at the same time. Dayton, 1910, 1st and 2d hen, 1st and 2d cockerel, 1st and 2d cock, 1st, 2d, 3d and 4th pullet, 1st pen, four club ribbons and silver cup for best display in Mediterranean class. Columbus, 1910, 1st cock, 5th cockerel, 2d pullet, 2d hen, 1st pen. Cleveland, 1910, 3d cock, 5th pullet, 1st pen. Indianapolis, 1910, 2d cockerel, 2d pullet, 4th cock. Toledo, 1910, 1st hen, 2d and 3d cockerel, 1st, 2d and 3d pullet, 1st pen. I have over 900 birds for sale and running 17 250-egg incubators and can furnish day-old chicks at \$20 per 100; eggs, \$2 to \$10 per 15, and \$10 per 100. Write me if you want good stock or eggs.

A few settings of eggs to sell. I have 250 chicks out from first S. C. W. Leghorn cockerel, Buffalo, now and more coming, never had such luck. If you are looking for show birds let me know. I am going to sell just four S. C. W. Leghorn cock birds this season and a few hens. I can please you. I know my Reds are better than ever. I have eleven cocks for sale and a few hens. Write your wants and see what I can do for you.

Harlo J. Fiske : Manager Skylands Farm : Sterlington, New York

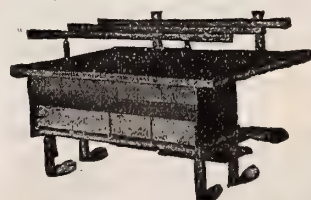

DON'T BUILD

That new hen house or fix up the old one, but get our large 100-page catalogue and circulars (over 120 illustrations) showing POTTER PORTABLE SANITARY POULTRY HOUSES, Roosting and Nesting Outfits, Perfection Feed Hoppers, Trap Nests, Feeds and supplies of all kinds. Potter Fixtures have been on the market nearly ten years. They are made in 3 styles and 12 sizes, and are complete, convenient and sanitary. Our Portable (K. D. made in sections) Hen Houses, Brood Coops, Pigeon Lofts are made in 20 styles and sizes, from a coop 2 feet square to a complete house 8x80 feet or longer, at lowest prices. House shown is 8x10 feet, complete with 8-foot Potter Outfit for thirty hens for \$40. A fine house at a low price! If you need a house or coop of any kind do not fail to find out about the Potter line before buying or building.

A \$40 House

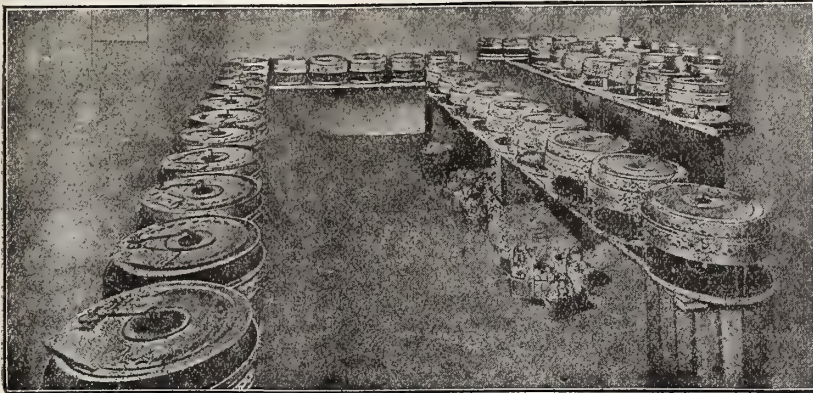

DON'T KILL or sell your laying hens; use the POTTER SYSTEM and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The POTTER SYSTEM is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens.

Used by over 30,000 satisfied poultry keepers who are saving dollars every year. Our new 100-p. Potter System book, "Don't Kill the Laying Hen," contains the secret and knowledge about laying and non-laying hens. It's a revelation to poultry keepers and you will learn how you can use the Potter System on your flock; keep less hens, get more eggs and make more money using it. Write today sending two red stamps to cover postage on our large catalogue and circulars telling all about Potter Poultry Products made for Particular Poultry People. If you are particular and want to make more money on your flock you will write us today.

T. F. Potter & Co., Box A, Downers Grove, Illinois, U. S. A.

A Little Poultry and a Living

Is the title of a little booklet we will mail free. It was written by the author of the PHILO SYSTEM BOOK, who makes every one of his hens pay him a profit of \$50 to \$100 each.

Metal Mothers

**Our New Discoveries
Make Poultry Keeping
Easy and Profits Sure**

Valley Falls, N. Y., Nov. 18, '09.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—I have used your incubators, both the Cycle Hatcher and Brooder Hatcher, during two seasons, and found them very satisfactory, as they were easily managed and gave excellent results every time. The Brooder Hatcher makes a convenient place for brooding the little chicks when first hatched, before putting them into the fireless brooders. Very truly yours,

(Rev.) E. B. Templar.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—No doubt you will be interested to learn of our success with the Cycle Hatchers. We have cleared over \$900 running our hatchery plant consisting of 56 Cycle Hatchers. We are pleased with the results, and expect to do better the coming year. With best wishes, we are, very truly yours,

(Mrs.) C. P. Goodrich,

Elmira, N. Y.

Our machines were used exclusively in the original Philo System plant, where over \$1,500 FROM 60 HENS IN TEN MONTHS has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our system of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

Our 1910 Pattern Metal Mothers

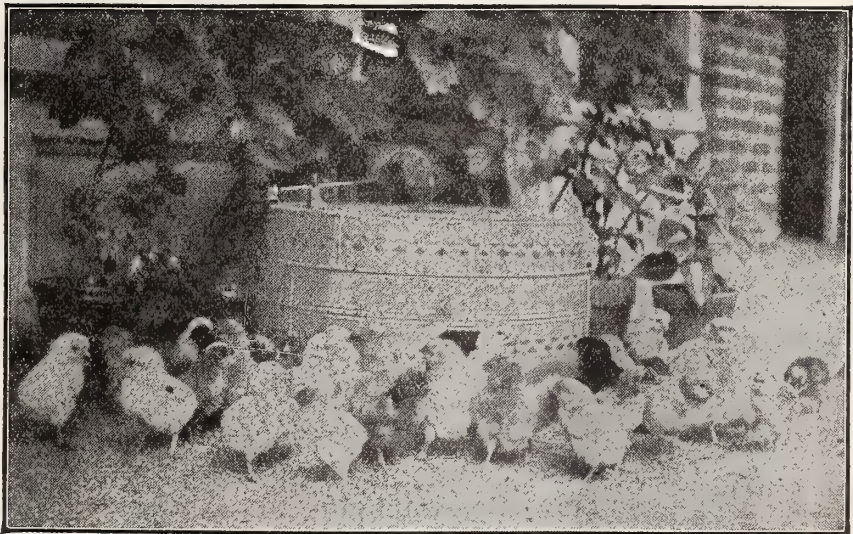

are the perfect results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic.

Large stock of machines at Oakland, Cal., our western shipping point. Write the Cycle Hatcher at the above address for Pacific coast prices.

One Metal Mother complete, \$7.50; two, \$14; four, \$24. One Cycle Hatcher complete, \$5; two, \$9; four, \$17; six, \$24.

The booklet "A LITTLE POULTRY AND A LIVING," fully illustrated and describing these machines, and a complete line of the most approved poultry appliances, mailed free.

Cycle Hatcher Co., 214 William St., Elmira, New York

100 PER CENT PROFIT

THE FIRST YEAR

Keeping Poultry by the Philo System

PHILO NATIONAL POULTRY INSTITUTE. 27,000 SQUARE FEET OF FLOOR SPACE

We Guarantee

That any intelligent person can make a profit of 100 per cent on an investment in the poultry business by the Philo system, and our guarantee is backed by

One Hundred Thousand Dollars

worth of real estate in the city of Elmira, consisting of thirty acres of land and the complete plant of the Philo National Poultry Institute. This entire plant and equipment has been completely paid for out of the earnings of the poultry and poultry supply business by the Philo System.

The discoveries made to perfect the Philo System are the results of forty-one years' experience by one person experimenting and investigating the poultry business. We know that still larger profits can be and are being made by following our instructions, or we would not risk a hundred thousand dollars to back our guarantee. Our book, "The Philo System," tells how to do the work from start to finish and gives you the right to use all our inventions and discoveries to get such wonderful returns.

If in doubt about our responsibility and the value of our guarantee, write Mr. D. M. Pratt, President of the Second National Bank, Elmira, New York, or any other reliable party.

Send us \$1.00 and we will send you promptly our complete book and our agreement.

E. R. Philo, Publisher : 629 3d St., Elmira, N. Y.

CONTENTS OF THE PHILO SYSTEM BOOK:

Artificial Heat

Better poultry without it.

Artificial Incubation

About opening incubator during first week.

Avoid too much cooling.

Changing position of eggs.

Cooling the eggs at night.

Cooling the eggs on special days.

Overcoming defective work of first week.

Generation of heat by growing chicks.

Never set eggs in two layers.

Rules for second and third weeks.

Temperature of working room.

The cause of failure.

The instinct of the hen.

To raise temperature quickly.

Use of woollen cloth and hot water.

Watch the damper and regulator.

Best Age for Breeders

Best results from year-old hens.

Hatching in February and March.

Hens from five and ten years old.

Winter hatched pullets quick moulters.

Breeders for Broilers

Breeders for Exhibition

American Standard of Perfection.

Chicks from first eggs after mating.

Keeping careful records.

Use of leg bands.

Breeding in Line

Bad effect of in-breeding.

To insure good qualities of your birds.

Brooders

Disadvantages of wooden brooders.

Brooder coop advantages in getting fertile eggs.

Brooding without artificial heat.

Baby chicks outdoors in zero weather.

Large brooders a mistake.

Metal Mother first week in cold weather.

Number of chicks in fireless brooder.

Use of fireless brooder.

Perfect conditions and better birds.

Care of Breeding Stock

Adaptability of our summer and winter coops.

Hardening fowls to cold weather.

Must be protected from draughts.

Wintering breeders in barn loft.

Grading

Green Cut Bone and Infertility

Hatching

Get ready before ordering eggs.

Keep in advance of your business.

Hatching with hens.

Active hens the best setters.

Changing eggs in the nest.

Cleaning eggs.

Nests on ground no better than in the barn loft.

Raising the chicks in our brooders.

Saving the chicks by removing the eggs.

The causes of poor results.

Helping the Chicks in Hatch

Chicks properly grown can all be saved.

How to save them.

How to Start

Buy the best eggs obtainable.

Foundation stock hatched in February and March.

Guaranteed fertility.

Starting with two pairs of birds.

Starting where you now live.

How to Use Coops

Large and Small Flocks

Egg production.

Advantages of small flocks.

Leg Weakness

Indigestion the cause.

Remedied by care in feeding.

Seldom occurs when chicks are on the ground.

Lice

Put powder on brooder cloth.

Use of boiling water.

Use of wood ashes for hens.

Location

A combination for an acre lot.

Natural grit.

Sandy and gravelly soil.

Stony and lumpy soil to be avoided.

The new Philo plant and grounds.

Keeping Eggs for Hatching

Evaporation of moisture decreases the vitality of the chick.

Germ killed by high temperature.

Low temperature not disastrous.

Natural position for keeping eggs for hatching.

Not best to turn eggs daily while waiting.

Temperature and evaporation.

Temperature.

Two weeks the limit for keeping eggs to hatch.

Setting eggs the day they are laid.

Moisture

Evaporation while waiting for hatcher.

Excessive moisture produces too large a chick for the shell.

Supplying moisture the last week.

Too little moisture and the results.

Pedigree Breeding

Banding chickens.

Expanding the leg bands.

Mating the birds.

Record difficult to keep.

Sixteen toe marks.

Plans for a Large Plant

600 coops on two acres to accommodate 10,000 chicks.

Poultry Helps the Garden

Mixing the fertilizer with soil.

Value of the fertilizer.

Pullets

Properly matured in space of one and a half square feet.

Winter hatched pullets as breeders.

Results of Philo System

\$1,500 a year from 60 hens.

\$1,500 a year for market eggs from 1,000 pullets.

Average eggs hatched and chicks raised.

Another estimate of profits, chiefly from broilers.

Cost of starting a broiler farm with 60 lampless brooders, coops and incubators.

Setting brooder-hatcher Dec. 10.

Plan of new grounds.

National Philo Poultry Institute.

Selecting Breeders

Advantages of selecting new breed.

As to the superiority of breeds.

Breed a matter of choice.

Making setters of non-setters.

Productiveness between rest periods.

Strain considered above breed.

The good breeding hen.

Width of hen and general make-up.

Selection of Hatching Eggs

Less than 24 ounces or more than 32 ounces per dozen never used.

Shape and color of shell important.

The test by sound.

Weight of 25 ounces per dozen preferred.

Sex Control

Selection of male and female.

To raise 70 to 90 per cent cockerels.

To raise nearly all pullets.

Vitality of male and female.

Testing Eggs

Theories without foundation.

To make a living from poultry.

Not a "get-rich-quick" scheme.

Ordinary good stock.

Prices of eggs and profits per hen.

Strict attention to business daily.

Two-Pound Broilers

In eight weeks.

Raised in space of one square foot.

Tender as squab when closely confined.

The food and care of broilers.

To prevent leg weakness keep on spaded ground.

Use of salt and of milk.

What investment and profit to expect.

Winter Quarters

Adaptability of houses already built.

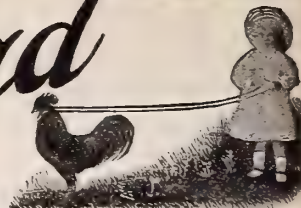

Comfort of the fowl.

Importance of ventilation.

Keep flocks small.

Ground not so important for mature hens as for young and growing chickens.

Value of Sunshine

John W. Poley :: Box A :: Royersford, Pennsylvania**Pittsfield's Big Summer Sale****is now on. We offer DAY-OLD CHICKS, HATCHING EGGS, EXHIBITION
AND BREEDING BIRDS at big reductions from our regular prices. Our****BARRED PLYMOUTH ROCKS****are recognized to be THE LEADING EXHIBITION UTILITY STRAIN OF AMERICA. They are adapted
to the farmer, the egg or broiler plant, or to the country estate.**

KEEP IN MIND OUR 1910 BOSTON RECORD—First cock, first exhibition pen, second hen and eight other regular and special prizes. We offer hatching eggs from special exhibition matings, containing all of our Boston and Portland winners for fifty cents on the dollar. For June and July only the price will be \$2 per 13, \$6 per 50, or \$12 per 100. And besides that we guarantee good hatches or replace the eggs free of charge. Special prices for all eggs from one pen also cut in two. Write for a list of special matings and see the values we offer.

DAY-OLD CHICKS AT 20 PER CENT DISCOUNT—For delivery June 17 or later which makes the price \$4.50 per 25, \$8 per 50, or \$12 per 100. This price is for chicks from our finest utility pens and is exceptional value for the quality and considering our successful experience in shipping which means that you will get a good lot of chicks and no disappointments. This means something to you. You should not delay in booking your order. To secure chicks at these prices orders must be booked ahead as we shall set no eggs unless on positive order. We guarantee safe delivery. We have shipped chicks successfully this season to Louisiana, Virginia and Iowa. This shows the vitality of our stock.

BREEDING BIRDS—From our own very best breeding pens will be sold this year as usual at attractive prices. These include both choice specimens from our exhibition matings and the cream of our bred to lay utility pens. Don't fail to accept this opportunity to secure some of the stock that has been the foundation of our success. Prices will be quoted to suit each special requirement. We take special pride in our reputation as successful breeders of a **HEALTHY, VIGOROUS, MONEY-MAKING UTILITY STRAIN**, and we can help you make your poultry culture profitable and pleasant.

We shall make a new departure in connection with the next fall broiler trade. In addition to furnishing highly fertilized hatching eggs in large or small quantities we will take contracts to furnish day-old chicks to those who do not wish to go to the trouble of hatching for themselves. Keep this in mind. Write at once for booking of day-old chicks and for free illustrated catalogue. Address

THE HISTORY OF THE RHODE ISLAND REDS

The Rhode Island Reds are a Breed Made and Finished by Out-Breeding, Not In-Breeding, as Is Usual in the Establishment of a New Breed or Variety—More than Sixty Years Ago the Foundation of This Breed was Laid By Farmers in Rhode Island and Massachusetts, This Being Red Cochin China Fowls Brought by a Sea Captain to a Massachusetts Port.

HE data for this article was contributed to Red Hen Tales, the official organ of the Rhode Island Red Club, by Dr. W. B. Aldrich, Fall River, Mass. Dr. Aldrich says:

"I am not one of those who is willing to say, 'Never mind the origin of the 'Reds,' or any other worthy variety of fowl.' I have been breeding poultry for twenty odd years, and I am always interested in the origin of every breed. Go back into history with me sixty years, and we find that, at that time, 1846-1850, different Asiatic breeds were introduced into this country, especially in neighborhoods that were near the coast. One variety, the Shanghai fowl (yellow and

white), was introduced just after the Cochin China, and the two breeds for a time became confused, and 'many farmers and poulterers declare, spite of feathers or no feathers (on their legs), that their fowls are Cochin Chinas or Shanghais, just as they please.' At this time Bennett, in his poultry book, says: 'There are but few, if any, bona fide Shanghai fowls now for sale.' These Shanghai fowls (simon pure) were heavily feathered on the legs. Not so with the Cochin China. At this time the Cochin Chinas were bred extensively in southeastern Massachusetts and Rhode Island. Dr. Alfred Baylies, of Taunton, Mass., imported in July, 1846, specimens of the yellow Cochin Chinas. 'The cockerels were generally red.' These were not specimens of what were called the Royal Cochin Chinas, as bred by the Queen of England, but direct importations. 'The Royal Cochin Chinas were one-third larger.' The Shanghais were heavily feathered in the legs; these imported Cochin Chinas lightly feathered, if at all. The ship Huntress, in May, 1847, direct from Cochin China, brought a pair of this variety of fowl, and Mr. Taylor, in speaking of them, says, 'The imported cock was a peculiar red and yellow Dominique, and the hen a bay or reddish brown'; that the young stock varied 'only in shade of color.' Bennett says, 'The legs of both sexes are of reddish yellow, sometimes, especially in the cocks, decidedly red—more so than in any other variety.' How many times I have called attention to the red pigment in a R. I. Red cock's legs.

"So much, then, for the Red Cochin China cock of fifty years ago. The sea captains brought home just such specimens to Little Compton, R. I., but a little later came the great Malay fowl, with its knotty knob of a comb—a comb that even today occasionally is to be seen on the R. I. Reds. The Jersey Blues—Bucks County and Boobies—were inferior varieties of Malays. The great Malays came from the peninsula of that name, at the southern point of the continent of Asia. They were spoken of as 'serpent headed.' Their color was dark brown or reddish, streaked with yellow; some varie-

ties of Malays run more reddish than others. In Little Compton was introduced what was known as the Red Malay. The Red Cochin China and the Red Malay cocks were selected, and crossed with flocks of fowls in Little Compton forty and fifty years ago, the same as today. Later, before the Wyandotte fever, the R. C. Brown Leghorn was introduced into many flocks of fowls in the neighborhood. Even at the time of the introduction of the R. C. Brown Leghorns the red fowls were spoken of as R. C. Reds. In a certain section, where the Leghorn blood was not used, today old settlers speak of their fowls as Red Malays. In this section years ago the Reds were all of the single comb variety, whereas ten or twelve miles further south were to be found Rose Combs in abundance."

Dr. Aldrich supplemented the above article with the following:

"If I were to say that the foregoing article told the whole story of R. I. Reds, I would be making a mistake. This breed derives its name Rhode Island Red from the male bird. The utility farmers of that section of Rhode Island known as Little Compton for nearly sixty years have been selecting red males and leaving the females to be what they may. By this means they have carefully outbred this now famous breed. Probably today there is not in the whole world another breed of fowls produced by fifty years of out-breeding. If it were only so, how much more vigor our several breeds would have. The R. I. Reds stand as the only proof of what out-breeding will do. We fanciers do not live years enough to compose a breed deliberately, unless we in-breed, but it was not so with the original R. I. Red breeders; they knew the Red cock was the most vigorous, and almost unconsciously they made a breed.

"The famous Barred Plymouth Rock, called more than once the 'American mongrel,' was not produced by out-breeding, and right here it might be of interest to note that the early Plymouth Rocks produced red males. Listen to Dr. Bennett's own statement: 'I have given this name (Plymouth Rocks) to a very extra breed of fowls, which I produced by crossing a cockerel of Baylies importations of Cochin China with a hen, a cross between the fawn colored Dorking, the Great Malay and the Wild Indian (game). The cocks are usually red or speckled.' By a later cross with the Black Java and in-breeding were produced the modern Barred Rocks.

"In regard to Rose Comb R. I. Reds, I am positive the rose comb variety existed long before the introduction of Leghorn blood. Old settlers assure me their fathers brought home Red cocks with rose combs, and I have been informed that some Cochin Chinas had rose combs. There was also a red variety of Chittagongs, and Mr. Rugg says 'sometimes there is a rose comb.' I know my grandmother and others had Chittagongs in this neighborhood fifty years ago; possibly, the rose comb on our reds may date back to Red R. C. Chittagongs.

"In reviewing this subject, one thing has struck me very forcibly, and that is, that Red cocks were numerous in 1850; just think of the different breeds that produce them. At the first Boston Poultry Show, held at the Public Gardens on November 16, 1849, Red Shanghais and Cochin Chinas, 'the cockerels were generally red,' were exhibited, as well as Plymouth Rocks, which, as I said before, produced red males. At this time we also find Red Malays and Red Chittagongs. The Shakebag fowl were imported to this country by Mr. J. L. Tucker, of the Tremont House, Boston. Mr. Mowbray thus writes of one in his possession: 'The only one I ever possessed was a red one, in 1784, weighing about ten pounds';

and Dickson says, 'the plumage of the male is brilliant in the extreme, being a bright red—the hens are of a bright yellow.' I do not need to quote more to convince you that red cocks are nothing new, even though the world did lose sight of them, except isolated Little Compton, R. I. It was the ghost of Hamlet's father who, suddenly hearing the crowing of the cock, announces abruptly that he 'snuffs the morning air,' and then vanishes to his dreary home. Probably this very crower was a red cock.

The red rooster of fifty years ago vanished to a small country village, but now has been returned to the large world. Little Compton, R. I., and Westford, Mass., are adjoining towns, lying to the southward of Fall River, Mass. One small vessel from 1827 to 1850 made about twenty-five trips annually between Westford and Providence, R. I., averaging 400 dozen of eggs. The total was 3,450,000, and the value of them \$35,000. This gives some idea of the value of the ancestors of the Reds in 1850. Finally a few of us discovered the Reds and realized they possessed superior qualities, both as producers of meat and eggs.

"Today our fondest hopes are realized, inasmuch as the Rhode Island Red is now raised in every country on the

love and Vernon L. Stafford, of Fall River, Mass.; Daniel P. Shove, of Somerset; William P. Shepard, of South Swansea; Fred W. Cochrane, of East Somerville, and Mr. Proctor, representing the Poultry Monthly. At this meeting the original officers were reelected and a third vice-president was chosen in the person of Rowland G. Buffinton. The standard adopted at this time proved to be an excellent working guide to breeders till the Boston meeting of 1901 when a more formal description and a more detailed statement of the points of excellence of the breed were decided upon. In the meantime, the membership had grown to upwards of fifty. Included in the list were breeders from about a dozen states. The election of officers at this meeting resulted in the choice of Hon. Charles M. Bryant, of Quincy, Mass., as president; William P. Shepard, South Swansea, R. V. Browning, of Nantick, R. I., and E. A. Robbins, of Nashua, N. H., as vice-presidents; John Crowther, secretary-treasurer; with an executive committee comprising, beside Messrs. Bryant, Shepard and Crowther, ex-officio, Vernon L. Stafford, Fall River; D. P. Shove, Somerset; Dr. J. Fred Watson, Nashua, N. H., and P. R. Park, Methuen, Mass. Honorary vice-presidents were designated as follows: Maine, I. F. Clark; New Hampshire, Luther Robbins; Vermont, Sanford Daniels; Massachusetts, C. A. Sanborn; Rhode Island, Samuel Cushman; Connecticut, R. C. Tuttle; New York, Charles Smith; Illinois, E. L. C. Morse; Missouri, R. F. Smith; Canada, W. R. Walters. It was decided to copyright the Club Standard, at that time the club membership numbered 102; today the membership is over 1,200.

No breed or variety of fowls which have petitioned for recognition by the American Poultry Association have met with the opposition which was directed against the Rhode Island Reds. At first they were ridiculed by a very large number of breeders. When they were first exhibited they were decried loudly and most vigorously by a great many fanciers. They were but mongrels, picked up here and there from the farm yards of Massachusetts and Rhode Island, said their denouncers. They were of no beauty and no use, and it was ridiculous for their promoters to presume to offer them for admission to the Standard as a distinct breed. There was no established blood in their veins. All this and more said these self-appointed guardians of the Standard. The editor of a leading poultry journal, whose columns now teem with Rhode Island Red advertisements, referring to an exhibit of these fowls at the New York show, and described them as a "motley lot, of all colors," and advised their friends to speedily withdraw them from an offended public gaze.

Today the Rhode Island Red Club is the largest specialty club in America, numbering among its membership prominent breeders in every state in the Union and some in foreign countries. The Rhode Island Red today is extensively bred, is everywhere recognized as one of the most useful and beautiful of standard-bred fowls. Upon many thousands of farms throughout the land the Reds are making money for their owners, while as a fancier's fowl they are second to none.

And why, we may well ask, has this once denounced, ridiculed and much-abused fowl become one of America's most popular and prominent breeds? This thing of the Rhode Island Reds coming into its own is another illustration of the truth of the saying that "truth crushed to earth will rise again." The Rhode Island Red would not have reached the high place they hold today, would still be in the humble place we found it a few years ago, had it not possessed superior utility qualities, which made friends for it while the color was being perfected.

Then when they began to breed reasonably true to color, when birds were exhibited in the showroom that showed a uniformity of type and the lustrous rich red color. Then they made friends fast and the "Red Boom" was on and nothing could stop it. Then more and more fanciers took them up and put their skill and brains into perfecting them until today we find them breeding as true to Standard requirements as any other parti-colored breed of fowls. The Single-Comb Reds were admitted to the Standard in 1904. In 1905 the Rose-Comb Reds were admitted as American Reds, which action was rescinded at the meeting in 1906 and they were then admitted to the Standard as Rose-Comb Reds.

Breed Characteristics.

Standard weights, both varieties—Cock, 8½ pounds; cockerel, 7½ pounds; hen, 6½ pounds; pullet, 5 pounds. The Rhode Island Red has a distinctive and individual type. The back is quite long, carried nearly horizontal. Keel bone long, breast full. This gives the body an oblong, box-like appearance. The color of the male should be a rich, brilliant red, except where black is desired. Free from shafting or mealy appearance. White appearing on the surface is a

First prize R. C. R. I. Red cockerel, Pittsburg, 1908; first cock Pittsburg, 1909; also shape and color special. Bred and owned by Craig & Mapes, Mt. Lebanon, Pa.

globe. Their great utility value is generally conceded, and today they stand second to none."

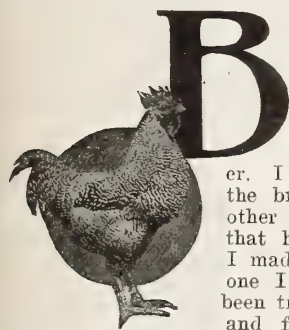

The Origin of the Red Club.

A few breeders of Rhode Island Red fowl held a meeting in the Coffee Tavern, Fall River, Mass., in February, 1898, and, after discussing the feasibility of organizing a Rhode Island Red club and deciding in the affirmative, elected officers as follows: President, Daniel P. Shove; vice-presidents, William P. Shepard and Thomas W. Roe; secretary and treasurer, John Crowther. These officers were voted "power to act" in promoting the interests of the breed.

On the 10th day of the following December, during the Fall River poultry show, a meeting of "all interested Rhode Island Red breeders" was held at the request of the gentlemen named at which a standard for the Reds was formulated. Those who took a leading part in the discussion of this document were Dr. N. B. Aldrich, John Crowther, John W. Free-

very serious defect and should not appear in the undercolor in any sections. It will be found in many otherwise fine specimens at the base of the hackle or base of the tail, and sometimes in the back down toward the sides. Also appears sometimes in the primaries and secondaries. The tail should be a greenish black. The black tail contrasting with the brilliant glossy sheen of the male makes a sight that is bound to be admired by any true fancier. The hackle of the male should be free from any black or any inclination to striping. The color of the female should harmonize with the color of the male's breast and should be free from shafting or mealy appearance. A slight ticking of black on the tip ends of the lower hackle feathers is desirable, the main tail feathers should be black. The female should have the same long, straight back and oblong body as the male.

MATING AND BREEDING RHODE ISLAND REDS

BACK in 1899 Samuel Cushman, then of Pautucket, R. I., began to boom the Rhode Island Reds as the greatest ever. I was attracted to them by an article which he wrote in, I think, the Farm Poultry or Poultry Keeper. I wrote him for further pointers on the breed and when he said, amongst other things, that they were a breed that had an exceptionally long body—I made up my mind that here was the one I had been looking for as I had been trap nesting my White Wyandottes and found that my best layers were those having the longest bodies. As eggs were the principle thing, with a bird that had plenty of meat on it to make a Sunday dinner, I decided to try the Reds, but as there was no standard for them at that time every one I got stock or eggs from had all the different shades of red and buff, so that one did not know where to "get off" on the color line and the shape and size was not uniform, but in 1904 they were admitted to the Standard; then we had something to breed by.

From the first I began to breed for shape and heavy laying qualities. I think I have succeeded in both, as I have some of the best shaped birds one would care to see and as to the utility side, when one can make his birds pay a net profit of

having a nice balance on the other side of the sheet, for there is nothing so discouraging as to have a bunch of fine feathers setting around doing nothing to pay their board.

Each year pick out from your best layers those that come nearest to Standard requirements, but in so doing do not lose sight of the utility. Keep utility in your mind first, for I

RED CLOUD.

First S. C. R. I. Red cockerel at Indiana State Fair, 1909, and Anderson, Ind., 1910. Also shape special. Owned by R. A. Slaughter, Greentown, Ind.

find here is where the most money is made. Keep type in your mind also, for type is what makes the breed. The color will come later as each year you will have some birds that will be a little better in color than the year before, that is if you have been mating properly.

There has been so much said about mating Reds that it seems as though this subject had been pretty well covered. I like to get the male and females as near the Standard qualifications as possible but if you have a male that is strong in that your females are weak and this male has a rather short back, do not let this bother you, as some of the best shaped birds I have come from a mating of this kind. This male was from stock that had good shape though. He was exceptionally strong in wing and tail markings and I wanted to strengthen this in the progeny and he certainly made the improvement. Don't throw out the male that has a little smut in undercolor on back, if he is a good bird otherwise, if you want to improve the undercolor, for I find that this will do it. While we all dislike to see smut, it isn't near so objectionable as a white or nearly white undercolor, and if used in this way it makes an improvement, I find.

In breeding for color do not use males that are several shades darker than the females or vice versa, as this will give you mottled or calico colored birds. Use birds that are evenly matched as possible. Get the hens to match the male's breast as near as possible. I do not think any harm will result if your male's breast is a trifle darker than the general surface color of the females, but I like to have them as near alike as possible.

Try to have your birds in one pen as near alike in regard to size, shape and color as possible. Your birds will show up so much better and when you have visitors you will have something to show them that you will be proud of. Better have a few in one pen that are evenly matched than have them all shapes, sizes and colors. So many breeders put two or three good birds in a pen, probably winners at some show, and fill out with others of several different descriptions.

In introducing new blood I like to do it through the female side. In so doing one is not so liable to undo the work of years of hard work and study. Procure a good female from some breeder you know has stock as near like yours as possible and get this bird strong in that which the male bird of your flock, which you intend to breed with this female, is weak, or any characteristics which are missing in your general flock such as shape or size, and breed this female to your best male. The next year pick out the pullets from this mating and breed

RED BEAUTY.

First S. C. R. I. Red pullet at Anderson, Ind., 1910. Also special for shape. Bred and owned by R. A. Slaughter, Greentown, Ind.

\$4.97 at the prevailing high prices of feed I think this is as well as any of the other breeds will do, Leghorns not excepted.

I think every beginner should look out for the utility side first, then fancy later. Make your birds pay their way besides

them back to their sire. The third year you ought to be able to tell pretty near what to expect from mating the cockerels of this mating to the females of your original flock. If you have the space and the buildings, any small colony house will do just so they will have room enough in which to exercise; you might try one of the best cockerels of the first mating to a few of your original hens. Sometimes I find I can make a fine improvement in a mating of this kind without injury to my original blood lines. Each year I send to some breeder and get eggs. I mark the chicks from these eggs. In doing this I get a better selection for introducing new blood. It isn't always I get what I want, but the chickens pay for their raising and for the eggs when sold on the market and then I have the satisfaction of knowing I have something a little better than the other fellow. Introducing new blood this way you do no violent outcrossing also keep up the vitality of your flock. This is the best way to keep up uniformity also. Often, when I have visitors and point out a certain bird as one that has some good qualification, such as being a good layer or producer, they say, "Why, I don't see how you can tell

ORIGIN AND HISTORY OF RHODE ISLAND REDS

Points on Mating—Standard for Color and Shape—Defects and Dangers—The Origin of the Rhode Island Reds.

Written for American Poultry Journal by Anna M. Lembke, Griswold, Iowa

SEVERAL Asiatic breeds were brought to Rhode Island, in 1846 to 1850 on the ship *Huntress*. These breeds were probably the Shanghai, Red Malay, Cochinchinas, and a variety of Chittagong.

The male bird of the Cochinchinas was of a reddish yellow mixed, while the hen was a reddish brown. The great Malays came from the peninsula, down in the southern part of Asia. In little Compton, R. I., the red Cochinchina cocks and the Red Malay cock-birds were selected to cross with the flocks of fowls forty to fifty years ago, just as they are today.

The old settlers back on the coast at the present day in speaking of their fowls called them the Red Malays.

How I Mate My Reds.

The first thing is to know the breeding of the birds you wish to use as breeders. By this I do not mean that it is necessary to know the pedigree of each bird for eight or ten years back, but if you do so much the better (as I have line-bred my birds for the past ten years).

My experience in breeding the Reds has been to use only birds that come nearest to the standard requirements, as they make the best breeders. Some of the Red breeders argue we must use the double mating, viz., cockerel and pullet matings to produce standard color in both male and female. In my experience I find it unnecessary as it is a fact that like begets like, so it is in mating your fowls. I experiment each year by selecting the best birds in my flock and mating them together to see what they will produce. In the females we look first to shape, next to size and color. A great many times in selecting hens I like best for breeders you would not take a second look at them, in regard to them producing fine colored birds, as they have been through a heavy laying season, and their plumage faded considerable since they were pullets, as the Reds are such great layers the strain on their system takes the life from the color of the feathers; still their constitution has the vigor and strength and will produce excellent stock. On the other hand, if you have a hen that will go through the laying and moulting season and still retain her red color, you are to be congratulated for owning such a bird.

Select your hens with as good a head points as possible. For color and stamina we depend upon the males and the rich red color which is always visible. At the same time we try to have the undercolor as rich a red or salmon color as possible, at the same time have it free from smut or white in any section of the body; but in case I must use a bird in my breeding pens with either of the above defects I prefer the smut to the white, as I consider that one of the most serious defects there is in a Red.

You must breed to dark red males if you wish to produce dark red females, which are always in great demand. If you use males light in color you need not look for anything more than buff females; but avoid extremes in color of males and females—that is, not to use too dark a male with too light colored a female, as it will cause unevenness in the color of your flock. All the good points cannot be accomplished in one year. It is a well known fact that the Rhode Island Reds have been bred for the past 50 or 60 years, and they say they are still in their infancy, but their great strength, strong constitution and laying qualities can be excelled by no other fowl. It is our desire to breed for show qualities and at the same time retain the great egg yield. A great many customers make a sad mistake by purchasing utility stock and expect show birds from same. The same applies to buying cheap eggs; always buy the best if you expect to enter the show room.

Shape Standard.

Of the club is: Cocks, 8½ pounds; cockerels, 7½ pounds; hens, 6½ pounds; pullets, 5 pounds. Shape of male's head, medium size, red eye, both rose and single comb varieties; wattles medium in length; ear lobes well developed; neck medium in length, carried slightly forward; back broad and long; breast and body, broad and long; keel bone long and straight, extending well forward; fluff, moderately full, carried close to the body; wings medium in size; tail of medium length, well

Powhatan II. at six months of age. Was over-weight at that time. Scored 94¼. Heading first pen at Red Riding Hood Yards, Antwerp, Ohio.

one from another. They all look alike to me." This is the way it should be. Have uniformity in size, shape and color in connection with heavy laying qualities; then you will have something to be proud of.

C. M. Agler.

Millbury, Ohio.

"THE LITTLE RED HEN"

She's long on the back and thick on the thigh,

She's black in the tail and red in the eye;

With comb not too high, set firm on the head,

The beak must be horn color, yellow, or red.

Her breast must be broad and deep, too, as well,

With body quite oblong and good length of keel

A neck not too long, of bright cherry red.

Not dark, heavy lacing, slight ticking instead.

Her plumage a rich even red to the skin,

With no traces of black or smut creeping in.

As a layer I vow she's hard to excel,

She's the pride of the cook and butcher as well;

She's the queen of them all, on farm, field or pen,

So, LONG LIFE AND SUCCESS

TO "THE LITTLE RED HEN!"

Marblehead, Mass.

John E. Davis.

"THE BEST IN THE WORLD"
WHITE PLYMOUTH ROCKS AS BRED AND OWNED BY U. R. FISHEL
HOPE, IND. THE MOST VALUABLE PEN OF FOWLS EVER PRODUCED.

spread, carried well back, increasing the length of the bird. A line of red pigment down the sides of the shanks is desirable.

Color.

Surface color of the plumage, rich brilliant red, except where black is desired, free from shafting or brassy effect; black or greenish black tail, red or salmon undercolor; hackle of the male free from black, ticking in hackle of females is desirable, females lighter in color than males.

Defects and Dangers.

My experience in breeding the Reds is that the darker red the better, provided there was no smut in undercolor. I always was prejudiced against using stock for breeders that had white in wing on thigh joints or in neck.

In selecting your breeders use those that have the least contrast in color from comb to tail; look well to shape, as that is 70 per cent of the bird. In some of our largest shows the past season the Wyandotte-shaped Reds won over the true-shaped Reds, which is a disgrace to our noble birds.

America's Greatest Invention.

She is not only known for her great inventions in machinery, etc., but for the greatest fowl on earth, the Rhode Island Reds.

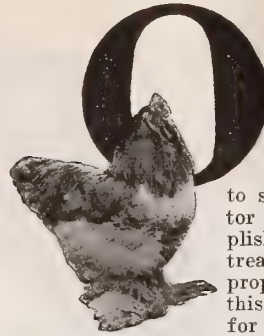

First Single Comb Buff Orpington cock, Pittsburg, 1909; also first Crystal Palace, England, 1908. Owned by Craig & Mapes, Mt. Lebanon, Pa.

They are nearest to perfection for meat and egg producers, farmers' friend, best on the city lot, hardy as an oak, almost free from disease, great foragers, mature early, easy to raise, legs and toes free from feathers, golden, yellow skin, free from black pin feathers, their meat tender and juicy. The Reds demand the first place on Boston market, the most aristocratic market in the United States. The hens make the best of mothers, require no double matings, in laying qualities they are simply egg machines. Their plumage requires no washing, dyeing or bleaching when getting them in shape for the show room. I prefer the rose comb to the single comb, as their comb will not freeze so easily.

For those who are striving for an all-purpose fowl we breeders of the Rhode Island Reds present to the world the greatest utility fowl as yet produced. "Long live the Reds."

HATCHING AND REARING RHODE ISLAND REDS

NE of the prime factors in successful hatching and rearing of chicks is the constitution, vitality and vigor of the parent stock. An acquaintance a short time ago, discussing his son's condition with the family physician, said he wished he might give the boy some treatment

to strengthen his constitution. The doctor smiled and said: "Well, to accomplish that, I should have to commence by treating his great-grandparents." So in properly matching and rearing chicks this season we are laying the foundation for greater success in this line year after

year, until three or five years hence the result will be that nearly every egg produced from this stock, properly incubated, will hatch a strong chick, and practically every chick hatched grow up to maturity. This at least has been my own experience.

In Rhode Island Reds we have a variety to start with that was developed by years of out-breeding, and, generally speaking, in no variety is there to be found greater constitutional vigor.

I hatch all my early chicks with hens. The first hen was set this season January 20. The eggs were saved from the pen I showed in New York immediately after their return from that place. February 10 this hen hatched eleven chicks.

Now comes a partial description of my method of brooding which may seem to some shocking and almost incredible. The coops are made from strong boxes about three feet square and eighteen to twenty-two inches high. These are covered with building paper. Through the center from front to back is placed a slat door which slides in in grooves, the slats being far enough apart to permit the chicks but not the hen to pass through. For the front two doors are made of one-inch wire mesh tacked onto a frame, and these slide in grooves from each side to the center. Two doors are also made of one-half-inch matched sheathing, with a glass in the center, which also slide in the grooves from each side to the center. I have always made these two solid doors, but it is on only very rare occasions that both are in use.

When early chicks are hatched one of these boxes is placed on a snow bank, with about four inches in thickness of horse manure under the box and on top of the snow. Inside the box is thrown a litter of clover hay chaff about half an inch thick, and upon this is sprinkled a generous amount of chick grit. A dish of water is placed in the coop, and it is then ready for the reception of the hen and chicks as they are taken from the nest. A little whole corn is put in for the hen and when the chicks are twenty-four or thirty-six hours old a generous amount of commercial dry chick feed is thrown in the litter. The coops are cleaned and the litter replaced every second day. Commencing the third day the chicks are given all the chopped cabbage they will eat each day, and a small box of sand is placed in the coop. When about ten days old they are given beef scrap.

As already stated, both solid doors are very rarely in use. In midwinter, with the temperature ranging below zero, in the front of the side of the coop in which the hen is confined one of the solid doors with the glass in is usually in place, while in the front of the other half of the coop one of the doors made of wire mesh is used. In case of a blizzard the other solid door is leaned against this wire mesh door, the bottom resting on the snow about four inches from the coop and braced to keep in place. These coops are always placed in an open space, facing the south, where nothing will shade them from the sun.

This is an open air system applied to the rearing of chicks in mid-winter, and the results obtained have been remarkable. During each of the past three years I have hatched two or three broods of chicks in February, and am unable to recall the loss of one chick treated in this way. I have uniformly had better success with chicks hatched in February and March than with those hatched in April and May.

As stated above on February 10 last a hen came off with eleven chicks. She was placed in one of these coops on a snow-bank. During the first weeks we had a cold wave and the mercury registered from 20 to 28 degrees below zero several nights. During two or three of these coldest nights both solid doors were in place in the front of the coop, but an open space of about a half inch was left between them. With this exception, during all the time, one-half the front of the coop was enclosed only with the wire mesh. Not one of these chicks were ever sick or weakly. They now (May 9) weigh about two and one-

half pounds each, and a sturdier more promising lot you never saw.

February 24 two more hens came off, one with seven and one with nine chickens. They were treated in the same way, are now well feathered and nearly as large as the first lot. Every one sturdy and strong.

As soon as a spot of bare ground can be found the coop is removed to this place, a wire run placed in front of it and the chicks let out on the ground. About May 1 they are taken in the country, placed on free range on a farm and remain there until late in the fall, when they are again brought home, placed in roomy, sunny well-ventilated coops, fed a variety of grain in a clover hay litter and are soon in condition for the show room, and the pullets at once commence producing eggs that will hatch chicks that will live under almost any conditions.

This is, of course, only a brief and partial description of my methods, but I have attempted to describe the method used in brooding early hatched chicks. B. H. Arthur.

Gloversville, N. Y.

STANDARD SELECTION OF RHODE ISLAND REDS

MUCH has already been written on the mating of Rhode Island Reds for the production of exhibition birds, and as the breeding season is nearly over I will not stop for that. Now comes the selection of the exhibition young stock, and unless we are very careful many valuable specimens will be discarded. First, to consider the color. I think that of the greatest importance. What is a Rhode Island Red without color? The young chicks that at broiler age show a red ear lobe are

not likely to have a pale lobe as an adult. The beak is more or less guess work at that age, as it is likely to change and there is little danger of its disqualifying anyway, as the Standard allows a "yellow or red horn." To be strong in the hackle as matured pullets the young chicks should show more or less ticking when broiler age. While some of the young cockerels may show ticking in the hackle they usually lose this with their chick feathers. The wings of both pullets and cockerels should show a considerable black at this age. However, I have seen chicks with no black at all in their wings pull in strong black markings with their adult feathers. Next the wing bow. One may form a pretty fair opinion of the

SINGLE COMB R. I. RED.

A typical breeding female on Excelsior Poultry Farm, J. I. Blake & Co., Galesburg, Mich.

general color of chick from the feathers of the wing, bow and back. While they always grow darker in these sections, as they go on to maturity they should, however, show a fair depth of color here as chicks. The undercolor should begin to take its final shade. The best specimens usually have a good under-

color at this age. The breast at this age is more or less guess work; however, nine chances out of ten they will get considerably darker, are almost sure to if the parent stock was properly mated, but a very dark male will sometimes throw a large number of pullets with light chocolate breasts. The tail feathers from the first should be almost black and are not likely

Single Comb R. I. Red hen, winner of first Columbus and Dayton, Ohio. Owned by Frank Reiber, Greenville, Ohio.

to make any great change. The legs should show good yellow. The eye at this age is also more or less guess work.

Now as to shape, I like a chick that shows a good breadth between the eyes; it is almost a sure sign of a strong constitution. The comb if single should have five or nearly five points, not too large, with no disqualifications. If rose it should be small and full, tapering nicely to a small spike in the rear, nicely covered with small points. However, I have always noticed that a chick's comb grows better as it grows older. The shape I like to see in a growing Red chick's body is a very long back with quite a little raise from the tail to the neck. The neck should be carried pretty well forward, so as to bring the base of the beak a little ahead of the breast. Such chicks will hardly ever have high or squirrel tails; as they mature their bodies fill out and the slight dip from neck to tail is nearly lost and produces a fine shape. Strict attention should also be paid to the legs and toes; any specimens having down or feathers on their legs should be discarded, as they only grow worse as they grow older. Crooked toes, etc., are bad defects and usually cut hard in the show room. After applying the Standard to your young stock I think you will find you have produced as great a number of show birds as you would from any other breed under the same conditions. Wishing the "Reds" a grand future.

Phil M. Ferry.

Almond, N. Y.

VALUE OF UNDERCOLOR IN REDS

It has always seemed to me that the Standard places altogether too much value on undercolor in the breeding of any of the favorite breeds, and as a breeder of Reds I feel that in my breed, particularly the Standard, sets a hard enough task in calling for opposites in hackle of male and female, in placing the black in wings and tail of male and female alike, and then calling for a deep rich red undercolor without slate or smut. As a matter of fact Reds never could have been bred to anything near their present standard qualities without smut, and smut will always have to be bred into every flock sooner or later to keep it from running buff, and as another matter of fact all the big breeders do it. What is the value of this undercolor anyway? Whoever sees it except in the show room when the judge is handling a bird? When you have established a type have the head points, outer color, tail and wings

right, or as near right as it will ordinarily breed, then you have bred all the human eye can see. Add to this vigor and stamina to stand the strain of heavy egg production and you have something that is beautiful to the eye and profitable to the pocket. If a judge picks up a bird of beautiful color with a little slate along the back he is cut for the slate. If he hap-

The above pullet was one of the many choice exhibition females showing the "Ideal Type" found in the Red Raven strain, recently purchased of Judge C. W. Zimmer by J. G. Budde & Co.

pens to have light instead of slate in undercolor he is cut just as much, and who but the feather breeder cares which it is if the bird is beautiful to look at from the outside. If the undercolor nonsense was cut out and the value of it added to "vigor and stamina" the 200-egg hen would be much nearer a reality than now.

The bird of type, stamina and vigorous health is worth a man's time to work for; it is in practical lines and means progress in real business sense. Add beauty of color as the fowl appears to the eye in the pen or on the lawn and you add to the pleasure of business, but when it comes to undercolor I protest that the Standard for all breeds, as far as it defines undercolor, is simply silly and nonsensical, and can neither add to the value or detract from the beauty of the bird, and if it can't what is it good for? It simply leads the ordinary breeder to a point where there is nothing to a chicken but "feathers," and I for one do not believe that the poultry industry is going to be uplifted or dignified in the minds of legislators, experiment stations or the good sensible people of the land by insisting on undercolor being of great value in the production of the country's Standard bred poultry.

Now how does it strike some of you other fellows? In my mind if we get some of the nonsense cut out of the Standard we will get more people of sense to go into the business.

Madison, Wis.

Leslie B. Rowley.

Ed. Note.—The next Standard will lay less stress on undercolor in all breeds.

LAYING QUALITIES OF REDS

I believe I take more real pleasure in writing on this particular quality of the Rhode Island Red than on any other subject pertaining to them. Every one who has tried out the Reds agree that they are great layers, and I believe but few really know just why. Read their Standard for shape or type, that surely tells the story.

I have taken a great deal of interest for a number of years in studying photos of the different breeds, some being published for the purpose of showing type that has made a phenomenal egg record, others that have won high honors in the

show room. I believe that a very large percent of the real egg machines show long bodies, particularly the Rocks. The heavy egg producers in nearly every case show long deep bodies, much longer than Standard requirement. This is not so with the Reds. Their Standard for type I believe to be the best of all of the American class. The Standard says their bodies shall be long, deep and horizontal.

This at once differentiates them from any of the other American breeds, and what better description can you ask for a real egg machine?

Here is a Standard you can follow for the show room and at the same time develop the highest laying quality to be attained in the breeding of a fowl. The Red Standard for type is my hobby and I have developed in my strain a perfection in type for laying as well as the show room that is gratifying.

"Lady Aristocrat," whose picture has been published many times, is a fair example. This female has proved to be one of the greatest layers I have ever owned. She is long and deep, but well balanced. She has laid without end and now nearly through her second breeding season has never shown broodiness but once, and that as a pullet after laying all winter and up to June. This type will produce the winter eggs as well as summer ones. A flock of typical Reds can be expected to produce winter eggs with the least care or petting of any breed in the world, and few breeds equal them through the regular or natural season for laying.

Finally I believe that he who is looking for the best year around layers and general utility qualities can rest assured, whether they meet his ideal or not, there is nothing better on earth.

Ira M. Crowther.

Willoughby, O.

THE BEST BREED

The question so often asked is "Which is the best breed?" and in the past the conscientious breeder would answer, "Well, that depends on whether you want to breed for meat or eggs." Now, however, since we have the Rhode Island Red, with its standard weight the same as the Wyandotte and but one pound lighter than the Rocks, and many strains even overrun the

The above bird was one of the many choice Red Raven males recently purchased by J. G. Budde & Co., of C. W. Zimmer, the R. I. Red specialist, who has spent twelve years perfecting the Red Raven strain.

standard weight, and it is a conceded fact that the Reds make the best squab broiler. broilers or roasters, carrying as they do more meat at any stage of their existence. The combination of the game and Cochin crosses give them a delicacy of flesh flavor not exceeded by any breed of poultry today.

With all these good points it is easy to see no breed can excel them at any stage as meat producers, and we must also remember they attain their full maturity at five to six months. On the other hand they are not excelled as layers. The games are good layers and the Leghorn cross in combination with the game, added to which is a heavy coat of feathers secured from the Cochins, which make them less affected by any change in the weather. This and a rugged constitution, secured by years of out-crossing, coupled with their activity, make them persistent all the year round layers. They often lay while moulting, and we have had hens when they were sufficiently broody to be given eggs lay as many as three eggs. They were confined in a 3x3-foot coop, with half-inch screen wire, absolutely tight, so not even a rat could get in and the eggs given her to sit on were marked and we absolutely know these setting hens laid these eggs.

It is nothing unusual to have a Rhode Island Red hen lay while caring for her chicks. We absolutely know that at least the Red Raven strain of Reds are "the best" egg-producers as well as "the best" meat producers and therefore the best breed. Further than this, the Reds do well in any climate. We have excellent reports from our birds in nearly

they all have good size, oblong shape and in color a deep cherry red throughout. I must admit it took me some time to produce the desired color in show birds, but by careful mating I believe I have at last solved the problem. My experience has been that the best show birds are produced by crossing dark, even-colored males with a clean under-color with females having some smoke in the under-color, but not too much; this I have proved by careful mating and punching all of my chicks. Do not, however, breed with a view to color alone, but stick to the oblong shape, as it is the hen with the shape that lays the eggs, and the true oblong type has made the Red famous as a layer and general utility fowl.

Rhode Island Red pullets, if properly grown, should begin laying at four and one-half months. I have heard this said of other breeds, but it has not been my luck to discover them. I am a firm believer in free range for the young birds, as they grow better and mature earlier if allowed to roam at will. As a broiler the Red is unexcelled, and when the faithful old hen arrives at the period for the axe, you can enjoy a most delicious pot-pie. A short time ago I had occasion to kill some two-year-old hens to make room for the young stock, and when dressed for market they averaged seven pounds each in ordinary condition.

If this is not a utility fowl, where will you find one; "I'm from Missouri, and you'll have to show me."

Pawling, N. Y.

J. G. Dutcher.

WHY REDS HAVE GAINED PROMINENCE

WHY all this noise about the Reds?

Why have they gained prominence so rapidly? Why are they "always" bred by the man who once breeds them? Did you ever know of them being dropped for another bird? Have they been "boosted" by rich men, who carry three and four pages of advertising in nearly all the poultry journals? No, they have forged to the front on their merits, strictly as "business" birds. They originated in the hands of farmers and market poultrymen, men who were, and are still,

getting their livelihood from them. Reader, do you suppose those old poultrymen of Rhode Island, who bred them for years before they were ever taken up by fanciers, didn't know a good thing when they saw it? You bet they did and they have not abandoned them yet. Now, suppose you were becoming inoculated with the "chicken bug," what would be the things you would require in the breed you expected to handle? Would you not want eggs during the winter months when they are worth the most money? Would you not want vigorous chicks that grow like weeds, chicks that do not draw up and die if they happen to get wet? If you are a market poultryman and have to sell your hens by weight after they have passed their usefulness as layers would you not want them to have weight and bring you enough to pay for raising pullets to take their place? Would you not prefer a docile bird that is easy to handle? Wouldn't you select the breed that is not so fluffily feathered as to interfere with the fertility of the eggs? Don't you think you would prefer a color that always looks clean even in a bare, muddy yard? Of course you would. Suppose you do not want to use an incubator and brooder, you don't have to, because there is no hen on earth that surpasses a Red hen in filling both these capacities. And how about their beauty? Can you find any combination of colors more pleasing to the eye than Red and Black? Judging from the admiration bestowed upon them in the show room one would think not. Just go to one of our prominent poultry exhibitions and stroll down "Red alley." What do you find but enthusiasm of the highest order? Just listen to the questions asked about them and the earnest replies given by the breeders and you will realize that the old adage ("Where there is so much smoke there must be fire") is more than true. Rose Comb Rhode Island Reds are making more progress today as show birds than any breed in the Standard, considering their existence in the hands of fanciers. I will admit that a few years ago they were of many different shades, but the color has been so rapidly improved that the percentage of culls is no greater than in any other breed, only a little easier recognized by the amateur. So when you decide that you must have a breed combining utility and fancy points, without the one interfering with the other, just cast your lot with "Rose Comb Rhode Island Reds" and you will never regret it.

Front Royal, Va.

M. C. Richardson, Jr.

every state in the Union, also in Canada, where it gets 40 below zero, and in Cuba, where it never gets below 50. No matter where they go the Red Raven Reds are giving the best of satisfaction. As we said in the beginning, knowing all these things there is but one answer to the question, Which is the best breed? Rhode Island Reds.

Budde & Co.
Oak Park, Ill.

AMERICA'S BEST UTILITY FOWL

POULTRY breeding has always been a hobby with me, and during the past twenty-five years I have bred nearly every known variety of fowl with more or less success. Some years ago I bought a pen of S. C. Rhode Island Reds from Robert Seaman, of Jericho, L. I.; these birds did so well and so far exceeded my expectations that I sold out my Leghorns, Barred Rocks and Orpingtons and gave up the entire farm to the Reds.

The following years I purchased several pens from prominent Red breeders and started in to found a strain of my own.

I have now at Maplecroft Farm about 3,000 S. C. Reds;

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to C. A. Sixt, West Park, Ohio, and the second prize to Mrs. W. T. Wilkerson, Mexico, Mo.

LINE BREEDING.

The Harm That May Result from Too Frequent Changing of the Blood Lines.

I NOTICE a great many people have the idea that utility qualities cannot be combined with exhibition qualities. I have been asked a great many times, Are your birds good winter layers? To this I will say they are. In the first place a good show bird must have size and vigor, a nice red comb and must be healthy. Now, in order to produce a bird with the above qualities, it must have the best of feed and care and must be bred from vigorous and healthy stock. Now, I do not think that anything you do to produce a first-class

show bird will injure it in any way as a utility bird. Some will say the damage is done by inbreeding. To this theory I would say no damage will be done unless you go to the extreme, and this is true not only in breeding utility stock but it is true in everything else.

The question that a great many breeders are trying to answer, judging from the many articles that are written on the subject is, How far can we go with line breeding without introducing new blood?

We all know that we can produce a greater per cent of show birds by line breeding than by introducing new blood every two or three years. Some fanciers claim that size and vigor can be maintained for many years without new blood. Some claim three years is the limit. If we have inbred to the extent of diminishing the size or lowering the vitality of a bird we surely have injured the bird not only as a utility bird, but also as a show bird, and if the judge is onto his job he will count the bird out, and by so doing he will open the eyes of the breeders to the fact that size and vigor play a very important part in the make-up of a show bird.

I do not think a man could make much headway in building up a strain of birds if every three or four years he introduces new blood in his strain. For instance, he has some weak point in his strain and he mates his birds with the object of overcoming this defect. Perhaps the first year he improves this defect to some extent; the next year his birds show more improvement, and more the next year.

Now, if this man thinks that he needs new blood the next year he will purchase a male or female of some different strain, and, of course, he feels satisfied—he now has the new blood. But, perhaps, he has introduced something that he does not want. Perhaps he has something in this new blood that will put him as far back in one year as he went forward the three years he was trying to breed out the defect. If so, the new blood did him more harm than good. And it may harm him in more ways than one. It may put him off in color, or in shape, perhaps in comb, or who knows where. Now, he may

not see the bad effect the first year, and he will say to himself, well done. But the second year—or it may be the third year—he will discover defects that he never had in his strain before.

He will begin to feel bad about this time and will say to himself, where did this all come from? Surely, I never had any of that in my strain, and the bird I purchased did not show anything like that.

The fact of the matter is, if he did not have it in his own strain it is in the strain that he received his new blood from. It may not show in the individual purchased, but it is there, and it is sure to crop out sooner or later.

Now, this man is on the fence again. He wonders what he should do next. Now, I believe this man should stop a minute and ask himself where he got the idea that he needed new blood in his strain. Did some one tell him he needed it, or did he see it himself? The only reason he can have for introducing new blood is that his eggs do not hatch good, or the chicks are hard to raise; they do not grow well, and his stock does not mature into standard size specimens.

Now, if this man can prove that the above conditions are the results of inbreeding he, of course, needed the new blood; but he must be sure that the conditions are due to inbreeding because there are a great many other things that will cause the defects mentioned, such as lice, improper feed, lack of exercise and a great many other things.

Now, the same question will be asked again—What shall we do? If we cannot retain the size and vitality by inbreeding, and if by introducing new blood we injure the blood lines, will someone please explain the mystery?

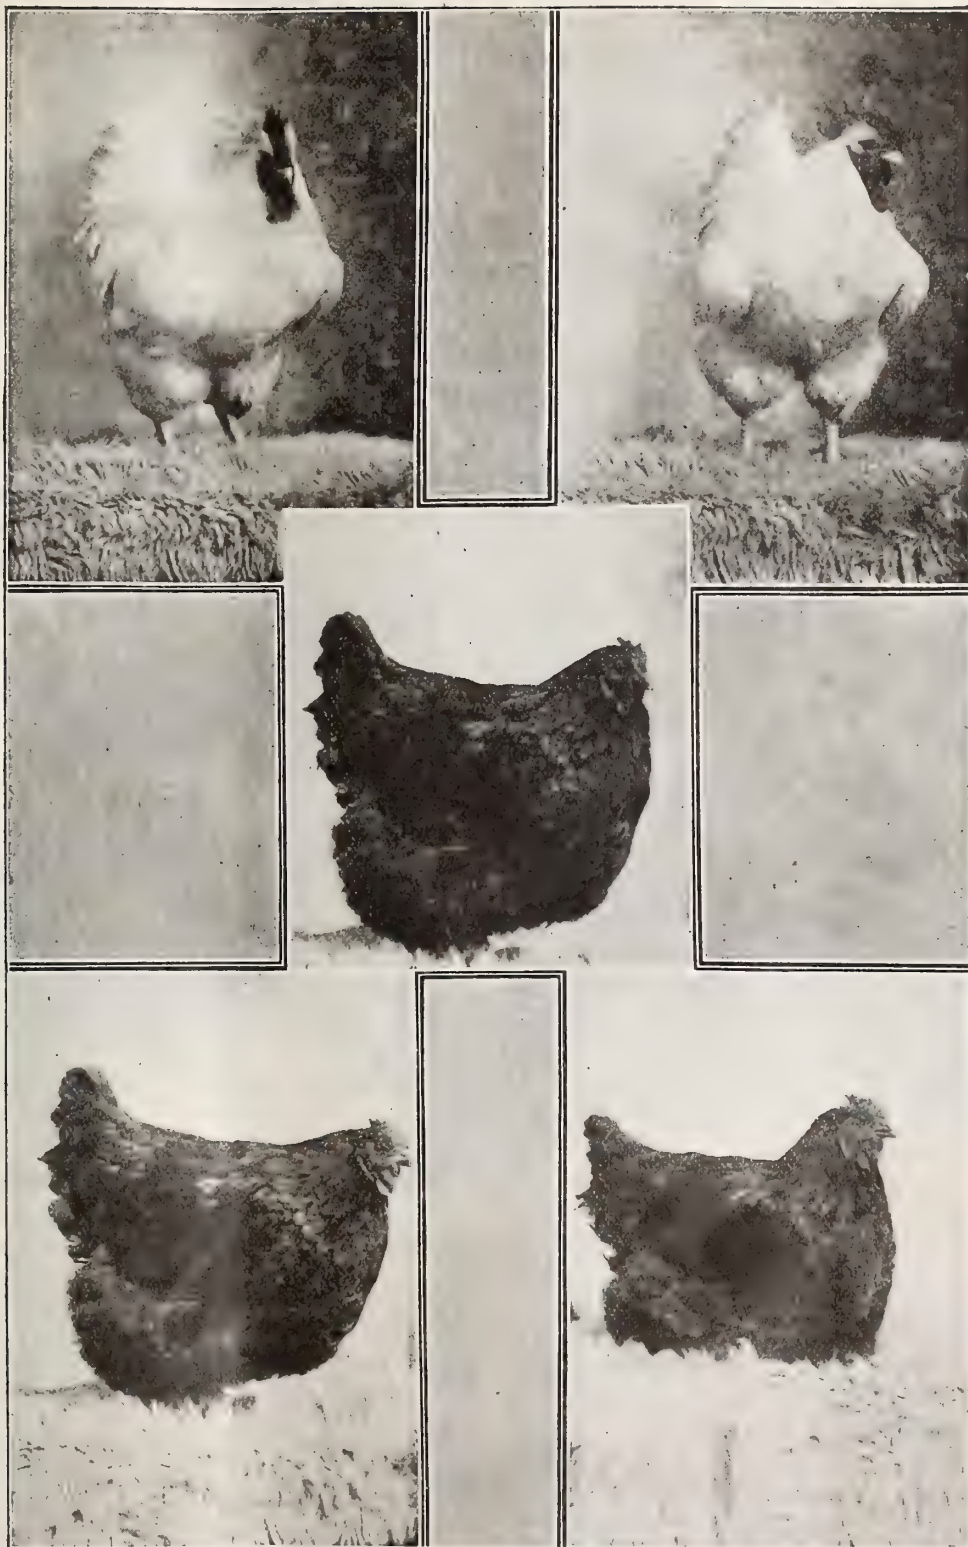

Now, as this article is getting too long, I will do as others have done, stop where I should have begun. But if the American Poultry Journal will at some future time find place for another article, I will endeavor to explain how I introduce new blood without injuring the blood lines.

West Park, Ohio.

C. W. Sixt.

THE CARE OF BABY CHICKS.

The care of baby chicks from the time they come out of the shell until they are two weeks old is the most trying time for both chicks and the one who takes care of them. Right here is where more errors are usually made than at any other point in their growth. It has been wisely said it is one thing to hatch chicks, but quite another to raise them. By careful study of the loss, and the conditions surrounding unhealthy chicks I have learned one of the worst errors was taking Biddy and her brood off her nest too soon after she was through hatching. At the very least time it takes two whole days and nights after the chicks are hatched, if they are strong and robust, to absorb the yellows of the eggs. If they are not from very vigorous stock it will take them longer. Therefore, it is of vital importance to leave them under the hen right in the nest from two to three days according to the vitality of the chicks, which is reckoned by the prompt or slow hatching. When a chick is first hatched it is a fat squab; when it is taken out of the nest it should be as slim as a race horse and as sprightly in proportion. Have the roosts coops clean and the floors covered with good, coarse sand. Let them pick at that for three hours before feeding; feed the hen all the coarse grain she will eat as soon as she is put in the coop. In two hours after feeding the chicks give them water. When all have drank a sufficient amount remove the water to avoid dampness; then put in some good, dry, chaffy straw for them to hover on. The first two weeks of a chick's life is the most critical and the most important of its growing period. It depends largely upon how well the chick does at this time what your chick will be at maturity. It is an easy matter to keep chicks growing with proper care after they are two weeks old if they are thrifty. Chicks that grow fast during the first two weeks will feather out quicker and better than those that don't do well at that time. I keep my chicks in their coops from three days to two weeks, according to the weather. Change the straw every day

WHITE AND BLACK ORPINGTONS ON THE CHEVIOT FARMS, CINCINNATI, OHIO. CUTS MADE DIRECT FROM SNAP SHOT PHOTOGRAPHS, ENLARGED, BUT NOT RETOUCHEE.

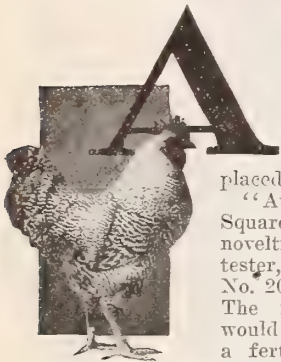

and keep their coops in a sanitary condition; clean, dry coops are an absolute essential all the time. I feed them in a feeding coop (made of wire or laths) close by the roosts coops. They soon learn the feeding coop and have already learned their own coops, which are made of dry goods boxes, the smallest size $2\frac{1}{2}$ feet square, the largest $2\frac{1}{2}$ feet by $3\frac{1}{2}$ feet and $2\frac{1}{2}$ feet high. No coop should be less than $2\frac{1}{2}$ feet high. One-half of front is made of one-inch mesh wire, the other half wooden door, and slanting tops; the back can be made a solid door except the upper board, fasten at top and bottom. They are much easier cleaned this way. The wire front gives light and ventilation. For deodorizing the coops I use to one gallon of water, one pint of pulverized copperas, and three tablespoonfuls of crude carbolic acid. As the acid adheres to the paint brush, care must be taken to get as much of the acid off of the brush as possible so as not to get too much acid in the coops. The acid will have to be added several times if a full gallon is made up at a time. Feed good, wholesome food with plenty of good water; supply plenty of good coarse sand, lime, charcoal, and oystershell, and there will be little need of doctoring your chicks. In case of bowel trouble, at first appearance give four drops of refined carbolic acid to each pint of drinking water and it will disappear in two or three days. By following the above methods I raise 90 per cent of the chicks hatched, unless killed by accident.

AN ARTICLE ON HOW TO INFLUENCE SEX

Written for American Poultry Journal by Rev. C. E. Petersen, Bridgton, Maine

RECENT issue of "Gleanings in Bee Culture" contained the following. It is a rich item and we appreciate it, owing to the fact that we were somewhat taken in with the instrument when it came out of England some time ago and told successfully the sex of animals or eggs placed under it:

"At the recent poultry show at Madison Square Garden, New York City, among the novelties there was a "sure thing" egg tester, the invention of W. Gunnerson, of No. 20 Garden street, New Rochelle, N. Y. The inventor claimed that his device would not only tell an unfertile egg from a fertile one, but would also determine the sex. The device was a small pendulum, which was held over an egg to be tested. If it swung around in a circle it indicated a cockerel; if back and forth in a straight line, a pullet, and if it remained stationary, an unfertile egg. I devised a plan to test the machine, and, accompanied by Frank Rodgers, of Farm and Poultry Magazine, brought an egg for Mr. G. to test. The device was placed over the egg and commenced to whirl around in a circle. Mr. G. pronounced it a very fertile egg, and, if placed in an incubator for twenty-one days, it would hatch out a cockerel, and he would bet \$100 on it. I then took the egg, and, in the presence of about fifty people, broke the shell and stated that it was a hard-boiled egg, and showed it to the spectators. Mr. G. said he did not care—there was life in it, anyway. The joke of the boiled egg spread all over the Garden, and next morning Mr. G. was kept busy testing eggs which, on breaking, all proved to be boiled, and the management then took a hand in the game and ousted Mr. Gunnerson from the Garden."

The above amusing incident may possibly furnish a text for a subject of more than ordinary interest, for if poultrymen were not more or less interested in the subject there would be no market for the many different contrivances and systems proposing to be infallible in their verdicts, and as a consequence of much value not only in the selection of stock-birds, but their eggs as well.

Many pages have been written since the days of Pliny, for to this writer is about as far as I can go, upon the possibility of producing a preponderance of either sex of our domestic fowls by the selection of the differently shaped eggs laid by them, and every now and again we see in print some of the old versions of the matter in a new form, and that always seems to have the power of attracting the attention of poultrymen, for if the thing could be made a fact it would most certainly be of paramount influence in the matter of successful poultry keeping.

Every poultry book has something to say about the matter, and in particular about the long proved fallacy of long eggs producing cockerels and the round ones pullets, and lately I have seen somewhere stated that if the air-cell was even across

the end of the egg it would produce a cockerel, but if situated on one side of the egg a pullet, but this as well as the shape of the egg itself is another fallacy.

It would be a great advantage to the fancier if he would somehow or other control the matter relating to the number of cockerels, but so far the only thing in this direction that has stood the test of experience is the law, that the more vigorous parent at the time of union usually produces a preponderance of the sex to which that parent belongs.

This is not by any means a universal rule, nor one that operates very extensively, but all observers agree that the proportion of the sexes can often be influenced by contriving that the sex we desire to preponderate shall be represented in the breeding pen by the most vigorous and least exhausted parent.

The number of hens given to each cock is also presumed to affect his proportionate vigor, and in that way to influence the probable number of either sex. So that when pullets are desired, as they often are, it will be wise to see that the hens are quite as young and vigorous as the cock, and in sufficient number. On the other hand, if cockerels are desired to preponderate, that can easily be brought about by mating older hens with a cockerel. It is more easy to insure a preponderance of cockerels than of pullets.

Head of typical White Orpington cock, as bred by the Sunswick Poultry Farm, South Plainfield, N. J.

But one thing which has been greatly neglected in the matter of influencing sex is by careful observation in the breeding pen of the individual specimens therein contained, and here as elsewhere the trap nest becomes a great help to the investigator, for without it it would not be an easy matter to know for certain.

It is well known that some strains of fowls show a tendency to breed more males than females, and in others the reverse is observed. Where this is a matter of sufficient importance, breeding stock may be selected with the object in view of influencing sex in whichever direction may be most desired, and by skillful selection in time breeding lines might be produced that could be depended upon to produce a preponderance of the sex wanted.

One of our own experiences has been that most all of our early hatched batches of chickens have a great preponderance of cockerels in them, while those hatched later run more evenly in the numbers of each sex, and it has never failed, to our knowledge, that chickens hatched as late as June will in every instance give a great preponderance of pullets, providing the same male bird and females have been together the whole season. Out of fifty June hatched chickens this season thirty-eight of them were pullets.

This would seem to substantiate the statement that where

the cock-bird becomes debilitated by long service pullets will preponderate, but there are a number of game breeders who state, as a fact, that strains in which cockerels preponderate are the strains that produce the most vigorous and courageous stock.

But coming back to the subject of selection, it is not very unlikely that if eggs were set from different females that it would be found that some of these females would lay eggs that would produce either all cockerels or all pullets. This we have never tried, and we know of no other breeder who has, but why should it be any more unlikely to find this a matter of fact among the fowl tribe than among animals and human beings? We know that there are animals that give birth to females only as on the other hand there are others that give birth to males only, and the same thing takes place frequently in the human family.

Now if it could be proven, and it can quite readily with the help of the trap nest, that there were every now and again hens of the kind just mentioned, it would be very easy to regulate the production of the different sexes to suit our wants.

This may be pure speculation, but we cannot help feeling that it is more than that; and that the real secret of the old subject in the regulation of sex is not to be arrived at by the different shape of the eggs, but by observation of the breeders and consequent selection with the object in view of establishing lines that will produce in preponderance either one of the sexes we may desire.

Another subject intimately related to the question of how to influence sex is the degree of influence which either parent will exercise upon the characteristics of its offspring. And in the matter of mating our birds for best obtainable results this becomes a question of the greatest importance, for if failure is made at this point a whole season's work may be lost, and it is largely because of this that several breeding pens are mated that the chances of obtaining good results may be so much increased. Even the most skillful breeder will sometimes fail in the production of his desires, for the results cannot be predicted with much certainty, and the more recently the breed was brought into existence the more uncertain will be results.

It may be said, however, that the dam has most influence on the vital powers, on the organs of nutrition and production; the sire is supposed to have control over the externals, affecting the appearance, but this is by no means constantly the result. Form, size and constitution are unquestionably of the most value in the dam; the limbs, the brain, the skin and its covering are greatly, but uncertainly, under the influence of the sire.

We have very little doubt that the greater influence ascribed to the sire in this respect is because almost all fanciers with hardly an exception take great pains in the selection of the male bird, much more so than in the selection of the females, and as he is the best out of many, the strongest and the most vigorous, and as to feather the most perfect, he, as a consequence, is more capable of transmitting his good qualities to his offspring, for it is quite certain that the female instinct goes out in admiration for the most perfect male, as Mr. Darwin has so well shown us in his chapter on Sexual Selection.

All of these matters have been neglected to a very great extent, but by the careful use of the trap nest in recent years more is now known, and still more will be known regarding the intricate science of properly mating our birds that they may produce more perfect specimens.

Let each breeder be a small experiment station in himself; keep records accurately, noting the different results, and by such careful and selective work, year after year, improved strains of birds will be produced that really are entitled to the name of new races of fowls.

There is something more than money to the real fancier, there is the great and enduring pleasure of knowing the why and wherefore of the breeding yard when finally after weeks and months of thought he puts together his few selected birds and awaits results in their progeny, and none but a real fancier knows what it means, and how it feels, when he finds that his judgment was correct and the coveted specimens of his desire stand before him ready to compete for the honors of the show room.

To be a fancier is to be born one; it is bred in the bone, and there is in him an innate love for the business; he never tires, and Sir John Sebright was not the only fancier who did not think it small work and unfit for a man to spend a lifetime in the perfecting of a new breed, for wherever anything is done well, and for the benefit of the great human race, nothing can be called small. It is a fact that cannot be successfully refuted that the fancier is entirely responsible for the improved product

of modern poultry, and that without his interference we should not have had what we have today, better poultry for pounds of flesh for number of eggs, and for beauty of plumage, all three uniting in making a combination of beauty and utility, and the beautiful is not the smallest part by any means, for loveliness of form and color always has been and always will be an attraction of which we never tire.

UTILITY IN REDS UNEXCELLED.

I am going to relate a story of utility to you concerning the Rhode Island Red.

A friend of mine came to this country from Denmark about four years ago, and as his father always kept White Leghorns he didn't know any better. He sent to Michigan for 100 chicks, received them and raised 95 out of the 100, and he was the happiest man in all these states. I had always talked the extra good qualities of the Reds to him, but you can imagine the stiff proposition I was up against in trying to get this young man to breeding Reds, as he was raised with nothing but Leghorns. I finally conceived an idea that if I gave

FIRST PRIZE WHITE ORPINGTON COCK. CHICAGO 1909.
OWNED AND BRED BY LAWRENCE JACKSON HAYSVILLE, PENN.

this gent a few eggs I could get him started, so I gave him four settings of my best eggs, and without my knowledge he sat two Leghorn eggs along with them, and they both hatched, as did 38 red chicks. After the first two weeks he commenced to force them, Leghorns running right along with the Reds, and we were surprised to find at the end of four months and 15 days one red pullet commenced laying and all the rest following shortly, and the cockerels at four and one-half months old weighed four and three-quarters pounds and at six months weighed six pounds, and the two Leghorns weighed one and one-half pounds only. Brother, this is a study in Reds. You can just imagine how pleased this young man was. He sold every Leghorn and today you cannot give him anything but "Reds." I can make affidavit to the above, sworn to by seven witnesses if necessary.

Now, brother, if this gentleman can get the Reds to mature in this manner you can, and there is no breed that you can market any sooner. Just force them a little and you will have two-pound broilers in eight weeks or layers in five months. Reds for market cannot be excelled. The sooner you get into the "Reds" the sooner you will make more money on poultry. I am a "Red" crank and I know my friend is.

"Yours for better Reds."

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

Annual Election American Poultry Association, A. D. 1910

Report by the election commissioner of the officers elected, as shown on the face of the returns:

President—Charles M. Bryant.
First Vice-President—L. H. Baldwin.
Second Vice-President—C. K. Graham.
Secretary—S. T. Campbell.
Members of Executive Board—Grant M. Curtis, U. R. Fishel, T. E. Quisenberry.

Place of holding 35th annual meeting—St. Louis, Mo.

Time of holding 35th annual meeting—Second week in August.

The candidates received votes as follows:

For President—Charles M. Bryant, 951; James E. Rice, 2.

For First Vice-President—L. H. Baldwin, 955.

For Second Vice-President—C. K. Graham, 942; Miller Purvis, 2.

For Secretary—S. T. Campbell, 955.

For Member Executive Board—Harry H. Collier, 379; H. V. Crawford, 511; Grant M. Curtis, 564; U. R. Fishel, 588; Chas. G. Pape, 71; Wm. P. Smalley, 123; P. H. Sprague, 84; T. E. Quisenberry, 565; W. R. Graham, 1.

Place of Holding 35th Annual Meeting—Buffalo, N. Y., 172; St. Louis, Mo., 648; Toledo, Ohio, 80; Niagara Falls, N. Y., 32; Port Huron, Mich., 18; Los Angeles, Cal., 1.

Time of Holding 35th Annual Meeting—First week in August, 45; second week in August, 136; third week in August, 41; fourth week in August, 25.

Fred L. Kimmey,
Election Commissioner.
Morgan Park, Ill., May 2, 1910.

The Work of Artist Stahmer

It may seem superfluous to some for us thusly to appreciate the work of Artist Stahmer, but we are proud of it and of him. For the last five years the work

of this artist has been improving steadily, until now he ranks among the foremost artists who are devoting themselves to the work of delineating pure bred fowls. The breeders who have been kind enough to allow him to depict their best specimens are all pleased with the quality of work that he has done for them. They are placing more of their work in his hands from season to season, as they need his services, and he has never disappointed them.

Many of the little beautifying things that have helped to put American Poultry Journal in the high niche that it now commands can be traced to the brush and pencil of this artist. Mr. Stahmer is not alone a poultry artist. He is one of the past masters of lettering and getting up advertising ideas for catalogs and letter headings and other matter of this sort. We could name many a breeder who will say that the increase in his business has been more or less due to the handsome work that Mr. Stahmer has done for his catalog covers and other forms of advertising he has issued.

The foreign poultry journals are from month to month using some of the best American-made illustrations of representative birds and we are constantly noting some of the work of Mr. Stahmer among them. The latest coming to our attention is the reproduction of the fine illustration made by Mr. Stahmer for that good White Plymouth Rock fancier and breeder, U. R. Fishel. This is seen in the English Feathered Life for April 27. Mr. Stahmer, as well as Mr. Fishel, are proud of this piece of work.

It might be well to mention in passing that it is about the time of year for the live fancier to begin planning his advertising for the coming season. It is none too early to secure the services of a good artist and get the matter you are planning to issue into shape for the printers. The early riser gets the pick of the bakers' fresh goods. If you are in need of something that will lift your advertising from the commonplace and give it life and individuality, better get

SUBSCRIPTION PRICE.

Subscription 50 Cents a Year—5 Cents a Copy of all Newsdealers. Chicago subscriptions 60 cents (when delivered by carriers). Foreign subscriptions \$1.00. Canadian subscriptions, 75 cents.

Look at the date upon your wrapper. Many subscribers write to ask when their subscription expires and many complain because we discontinue sending the JOURNAL at the expiration of time for which it is paid. The date when your subscription expires is found on the wrapper each month.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

Advertising rates are sent upon request.

in touch with us now. Mr. Stahmer is at the head of our art department and will give your letter every attention.

Our June Issue

Is not a Rhode Island Red number like some other publishers have gotten out in the past; we simply invited the Red breeders to contribute some articles and we would allow them considerable space this month. We made no effort to have it a "Big Red Issue," but we received fully twice as many articles as we could possibly use. This simply shows the popularity of the Rhode Island Red.

St. Louis Wins

Just take a look at the returns of the annual A. P. A. election and see where St. Louis stands in the estimation of the members of the association as a convention city. With six hundred and fifty votes to her credit, she wins. This means that the western states will turn out well to the annual meeting and that some live things will be determined upon. There is work to do besides get out a standard. There are changes in the constitution to be made and there are expenses which can be curtailed. If you have something in mind in the way of an improvement, now is the time to get it on paper and suggest it, that it get the benefit of being filed early and have the proper attention.

A Responsive Chord

Our editorial in the May American Poultry Journal seems to have hit the nail on the head in a good many quarters. From what we hear of it. We refer to the short note we gave vent to about delegates to the A. P. A. This not only stirred up a "hand" from the gallery, but from the dress circle, otherwise one of the leading officers in the A. P. A., who writes us as follows but

does not give his consent at this time for the use of his name:

"You are right, 'The American Poultry Association is going to get itself down on a delegate basis.' Why not do it now? Missionary work should begin at home. The great state of Illinois, one of the most important poultry districts of America, could easily have its own state branch association. New branches have been recently organized in the states of Texas and Nebraska. A branch is being organized in New Jersey; other states are contemplating separate state branch organizations. When states like Oklahoma, West Virginia, Kansas, California and others can and do support separate state branch associations, why not Illinois? At our last annual convention the expense of two sets of vice-presidents was paid. We should make membership more desirable. This can best be done through separate state branch associations. Where a branch association is composed of a number of large states it is almost as difficult to attend the meetings of the branch association as it is the meetings of the parent body. The distances are great and the expense more than the average member cares to stand; but with the separate state organization and the annual meetings held in different sections of the state each year, the members could attend. The medals and diplomas offered in branch association territory could be placed at shows in different sections of the state each year. The state branch meeting could be held at the time and place where medals are offered. This would enable all members of the state branch to take part in its annual meetings. This would create a friendly rivalry, stimulate interest in the branch association and in the local associations as well."

Our correspondent says some things that would have been tabooed a few years ago. It is true that the mid-West branch

is a bit large and unwieldy for the best results. The Southwest branch was, too, till it got going right. Now there are only Missouri and Louisiana in the branch.

This matter of paying the expenses of new officers who are seated during the annual meeting and that of the old officers who are replaced is one that we will not stand for long. There is a way out of the difficulty, but as yet we prefer to keep our own opinions to ourselves, awaiting the time when some other member shall suggest a means of getting around this unnecessary expense to the association. Lincoln Orr tells us in the May number of his "Western Notes," that there are too many vice-presidents and members of the board to pay for, and suggests that their terms expire before or after the annual meeting, and not on the date of it. This would mean a good saving in the matter of expense money to the A. P. A. Line, further says that until the states each have a branch and then the counties each have a delegate to select the delegate to the annual meeting, we shall not be down to representative poultry breeding interests. There is something in this, but the fulfillment of it will be a long time in coming. However, we are hoping for the best.

—o—

June-Hatched Chickens

The general impression seems to prevail that the early chick not only gets the worm, but also wins all the prizes at the great winter shows, year after year the demand for hatching eggs in March and April increases, and each year we find the breeder getting ahead just a little in time.

Now the question again arises, is this wise? and for our answer let us look up some past records of birds. It will be

noted that we mention several varieties, and the time required to properly mature these is ample time to fully mature any variety and show them at their best condition.

At the late New York show Grove Hill's first prize Barred Rock cockerel was a June 26 hatched bird, and if memory serves us rightly, their noble winner of 1907 "Crusader III," was also a late June-hatched cockerel. Mr. A. C. Hawkins showing seven cockerels at the late New York show, every one a top-notch and winning second and fourth, were all June 22 hatched and we doubt if ever before seven better cockerels were shown by any breeder. His New York champion cockerel of 1909 was a June 28 hatched bird. E. B. Thompson's New York Champion of 1908 was a June 25 hatched cockerel. No bird was ever shown in better condition than this one; he was trim in every particular. Charlie Welles' three-time New York winner, Fluffy Ruffles, was a July-hatched pullet, as was his winning pullet at the 1910 New York show.

John W. Poley's first Buff Rock cockerel at New York, 1909, was hatched late in June and his fourth and fifth pullets were July birds. Arthur G. Dutton's first, fourth and fifth prize White Wyandotte cockerels at New York, 1909, were all late-June-hatched, also his third pullet. His first pullet was July-hatched.

Mr. D. W. Young, who for some years has made records at New York with his S. C. White Leghorns, informs us that most of his winners were June and July-bred. The size of these same birds has been commended each year.

This is but a partial list of that before us, still it is enough to answer our purpose and to amply illustrate our intended point. We have known for

YOUNG'S STRAIN S. C. W. LEGHORNS

I HAVE NO OTHER BREEDS. It is acknowledged the world over as the greatest laying and exhibition strain. Eggs at half price from now on.

D. W. Young : Box 1-A : Monroe, New York

Champion Intruder, 1st cock and champion male, N. Y., 1908-9, both cocks and cks. competing. 3 of the last 4 champion males at N. Y. have been bred at Grove Hill.

NOT TOO LATE

To hatch winners for the January shows or next season's breeders. It is far cheaper than buying them. QUALITY is the only question and

BRIGHT'S BROWN LEGHORNS BARRED PLYMOUTH ROCKS

have few rivals and no equals for QUALITY. A strong and sweeping statement, surely, but the records attest its truth. For the last FOUR years at least each variety has won more prizes and points at America's peerless show, MADISON SQUARE GARDEN, NEW YORK, than those of any competitor.

Grand Reductions for June in Both Stock and Eggs

EGGS from best mated pens, only \$5 per 13, as they run; \$12.50 per 50; \$20 per 100. The same grand quality that produces our winners. Some fine breeders at almost half price.

years that many of our best breeders depend on their June-hatched birds for showing, and we also know that most of the Barred Rock breeders hatch late to improve the color and markings in their breeders. The best cock birds we have seen in this line were June, July and August-bred. The only question is to keep them a-growing; a good supply of food in variety will do this and we would like to have our friends try this. Fertility also at this season is as a rule better and greater satisfaction in the general result.

H. P. Schwab.

Express Companies Again

If the express company committee of the A. P. A. does not prove that it has at least accomplished something at the next annual meeting of the association, then we must consider that such committees are nothing but jokers dropped amongst us from time to time for the delight of fanciers who are not so deeply engaged in the business that the express company robberies and highway depredations are of financial interest to them.

The latest thing that comes to our attention is the case of a bantam fancier who sued one of the express companies for the non-performance of duty and then had the express company exert all its influence with the other companies so that they now refuse his shipments. This is certainly rotten. It smacks of trust methods. There is practically no competition between them. They, one and all, help the other to all they can steal. It is nothing more nor less than restraint of trade, and damaging to the breeder who has the express companies refuse him the poor service that they render, and if we were financially able we would fight this trust to a finish if it ever treated us like that. There is work to do. We first must have the parcels post, and then we must have lower rates and better service by the express companies. If every poultryman in the country would do his share we would have what we want, yet we sit down in the shade and are too lazy even to ask for what we desire. Is it any wonder that the express companies rob us right and left, when we are so cussed shiftless that we will not even protest?

An Important Sale

In this issue will be found the announcement of the sale of White Cochins by Adolph Anderson, Bristol, Conn., to J. B. Cornish, Jr., Washington, N. J. Mr. Anderson has been associated with Mr. George W. Mitchell, Bristol, Conn., for a great many years and is considered one of the best Cochin breeders in this country, and he certainly has produced some magnificent specimens. During several years past Mr. Anderson's White Cochins have been one of the leading attractions at the New York show, where they have always won the cream of the prizes. Therefore Mr. Cornish has bought a flock with an established reputation that is second to none in this country. Mr. Cornish is a thorough fancier and comes to us very highly recommended and we feel safe in saying to our readers who are interested in White Cochins that they cannot do better than to place their order for either stock or eggs with him.

Having purchased the entire flock he has some surplus stock to dispose of now and will also spare a few settings

of eggs from the most select matings.

It is Mr. Cornish's intention to keep this stock up to its present high state of perfection and become one of the leading poultry fanciers in the country, and judging from what has been told us about him he will succeed.

English Adopt American Ideas

Much on the order of the American special poultry train, with its lecture cars, and its demonstration cars, carrying their full quota of pure-bred fowls of the various kinds, incubators, brooders and other what-not appliances for the successful and profitable culture of poultry, the British have adopted the idea, and their first special poultry car has gone down in English poultry history.

Connected with this car were Edward Brown, the well known worker on British poultry matters; the Right Honorable Sir Thomas Elliot, secretary of the British board of agriculture and fisheries; Mr. Verney Carter, Mr. J. Smith, and representatives of the daily press. At times other lecturers were added to the list—Mr. R. Grant and Mr. Thomas, two well known British poultry organizers. To say that the thing was a success is stating it mildly. All the English journals are enthusiastic in their praise of the trial trip, and the various railroads are being sought to try the scheme on their lines.

Other States in Plenty

It is just about right, this thing of getting all states in the various branches on a representative basis as regards delegates to the annual meeting of the American Poultry Association. Illinois is not the only state that should be a branch unto itself. Minnesota, Wisconsin, Michigan and the states of the Southland and many others could be included in the list. The time is ripe. The conditions warrant the move, and the demand for more equal official representation on the executive board seems to point the way. If the delegate from each branch was a member of the executive board, as is now the case, there would be no need for a three-year term for nine other members elected at large. What is wanted is more breeders to have the influence they must have in the affairs of the association. This can be done by electing annually a delegate in each branch. If the president of each branch is the delegate, then well and good. He can be instructed how to vote and if he fails in carrying out the trust given him in this matter, then his head can be tossed into the basket at the next annual branch election. Representative government of affairs is what we want and will have.

Poultry a la Chanticleer

The people of this country are surely taking an interest in poultry, not only in the ways which we fanciers know about, but the women are now talking nothing but "Chanticleer." We have the Chanticleer hat, which is as near like a rooster as may be. Anyway, it is perched on a woman's head. And we have the Chanticleer pins and belt buckles; and it's Chanticleer this, that and the other thing. Truly, there is a big boom in the poultry world.

Hints for the Month

Just by way of spicing things up a little and showing how really inconsistent one can be, Brother Purvis says a few things editorially about brotherly love in A. P. A. politics and then lambastes T. E. Quisenberry very beautifully and without a qualm of conscience.

If anyone can get up a better page of A. P. A. matter and suggestions than the word slinger from Beantown, we would like to know where it is. Robinson does hit some heads and a lot of good things on the head. The way his "official artist" idea is going through the country shows what the boys think about the control of the artists who make the Standard's illustrations. The facts are that one cannot pull the wool over our eyes all the time. The election returns may show how much we are waking up. Another thing that strikes us as being good is the statement that editors who are in the A. P. A. offices and blowing

their own horns are doing more good than the editors who are not blowing their horns nor running for the offices.

All that is left of the Southwest branch of the A. P. A. are the states of Louisiana and Missouri. It will soon be time for the members from the Southland to form a branch with themselves, and thus leave Missouri standing alone. Missouri can stand. The more branches the more members of the executive committee who will not be in the ring. We are moving, though at times it does seem slowly.

It is a cinch that Linc. Orr never submitted his ideas for a reform in the A. P. A. to the high guy before they were in type. How such a thing as this slipped into R. P. J. will puzzle a few. Linc. says: "I am beginning to think the A. P. A. is on the wrong basis. It is getting too top heavy. Pretty soon it will be like some of the Tammany

gangs, a high boss, five overseers, a time-keeper, and a gang of three or four workmen. What looks like good policy to me would be to have each branch hold a good state meeting and send one delegate for every hundred members or fraction thereof, at the branch's own expense; the general officers to hold a meeting during the summer after all the branches have had their meetings; the state organizations to receive all moneys from membership fees, and pay only to the association a per capita tax sufficient to defray expenses; the only officers the association would have would be a president, one vice-president, secretary, treasurer, and three trustees, one elected every year; the annual election to be held by open ballot, at the association's annual meeting, each delegate to have one vote for every twenty-five members in his branch. He could be instructed, or not, whom he shall vote for or how to vote on other matters that may come up. I am sure a good workable plan can be fixed up. It is getting in a bad way."

One of our contemporaries runs an article on handling a back-yard poultry plat the past month. Next in line should come an article from some good woman telling how to grow a good garden and erect a scarecrow for the back-yard fanciers' chickens.

That wizard of the poultry pen, H. S. Babcock, takes for his text in Country Gentleman a passage from Chaucer. If this is not combining learning and chick-

ORPINGTONS

BUFFS, BLACKS and WHITES

My elaborate 30-page, 8x10 catalogue is complete and will be mailed for a dime. It tells the story of the famous Byers Strain Orpingtons. The best colored birds each season are hatched late. My regular prices on eggs run \$5, \$10, \$15 and \$20 per 15. After June 1 I will sell eggs at half price. The quality of my matings is superior and the same in Buffs, Blacks and Whites. READ THIS AGAIN.

You are familiar with my phenomenal records for the past twelve years in Orpingtons if you have watched the advancement of this wonderful breed. I won more premiums on Orpingtons at 1908 and 1909 Chicago shows than any other exhibitor. I have supplied winners for the largest shows in the United States and Canada in the past and will continue to do so in the future. There's a reason.

Anyone can write catchy advertisements to catch the unwary for pecuniary gain only but I have been and am in the business to stay and YOUR BEST INTERESTS WILL BE SERVED.

I have the quality of the hour in line bred birds that can be depended on. That means all in the establishment of a reliable flock.

C. S. Byers : Orpington Specialist : Hazelrigg, Indiana

"ARISTOCRATS ARE THE RICHEST COLORED BIRDS IN THE WORLD"

BUY EGGS

Prince Ringy

From the grandest matings that have ever been brought together. They have no equals anywhere in color and barring.

I Defy the World

To show up birds that can equal in dazzling wealth of color and in simply marvelous, fine, narrow barring the birds that are right now in my breeding yards. You simply cannot—you can not—find their equals anywhere. Eggs are very fertile—95 per cent. Price \$5 per 15. Order at once. Remember, birds hatched in May and June make the finest show birds.

ens and poetry and literature all in one theme, we pass it.

The Poultry Record tells us that there is to be no record of poultry taken in the present census which is kept and bred on less than three acres. We did not know this. When we filled out our blank and turned it in to be copied we did not notice any distinction such as this. What is your information coming from, Mr. Poultry Record?

Drev. takes the space and time to tell us that the Black Wyandottes are going ahead with the eastern fanciers who are breeding them for their beauty as well as utility. These and the Javas are worth the candle, so why not more breeders of them?

It is about time for the poultry associations to give some attention to antagonizing the poultry press by making it buy space at shows in order to do business, when the press so generously

A. A. FENN, DELAVAN, WIS.

gives its space for the furtherance of show information. Your move, Mr. Show Association.

The report comes that little old New York is going to have a preliminary show this season before the big event in the Garden. This will be a sort of tryout for the local breeders, so they tell us, and we hope it will win out. The dates for the regular show in the Garden are December 27-31.

Hope is somewhat revived in the hearts of the fancy over another show to be held in the Garden. Rumors are rumors, nothing more. The Garden will stand for another show at least.

By the way, that was a good dig that Robinson gave a certain gentleman about types of men.

Just so that we will not forget to keep our heels on the ground and our chins in and heads level, let us read the below clipping from a daily paper and note that there are a good many Mrs. Foxes in these United States who are breeding pure-bred fowls for the good they will do and not for the pleasant poses of the beauty they may attain. This woman cares no more about the A.

P. A. and the Standard than if there never was any, yet she is of the type of folks who should be interested in the association and it is time to get them into the fold by doing something that will interest them: "Mrs. Philip Fox, who resides on a farm near Bard, was in town today and brought her usual quota of eggs for market. In the past thirty days Mrs. Fox has sold to Worthing, the grocer, eggs to the amount of \$57.69, and aside from what she sold, Mrs. Fox retained seventy-five dozen for setting purposes and used thirty-six dozen in the house. She believes there is good money in the hen and declares she will stand by biddy to the last."—Mitchell Daily Republican.

* * *

Ernest Kellerstrass is behind the Kansas City show this season. It is to be held under the auspices of the Missouri State Poultry Association and they are planning to hold the biggest event in the world. Some class to the way they are going into it down there.

* * *

The "State Aid" bill for poultry associations is a good one, as it is drawn up before the legislature of New York state, and should be supported by all the fanciers and breeders of that commonwealth. Up to the time of going to press we have not heard whether the bill has been passed by both houses or defeated.

* * *

A new breed of turkey has appeared in England. It is called the White Austrian. From what we can see of it in the photographs that are appearing in the English poultry journals, it looks identical with the White Holland.

* * *

Tennessee is at work organizing a state poultry association. Bully for this state at the border of the Southland. Let the good work go on. This state is full of chicken breeders and they should get together.

* * *

Purvis is giving the last kick on the 300-egg and 200-egg hen subject which he stirred up. That is one advantage of being an editor. One can say his own say and cut out the say of others.

* * *

The Appalachian Exposition at Knoxville is going to have a great southern poultry show in connection with it. There will be some northern-bred birds there, too.

* * *

Replying to the query that appears over an editorial the past month, "Are the hen's eggs too small?" we would reply, "Yes," when we have to buy them.

* * *

The story coming from Philadelphia about the big farm to be set in motion by Markle, the mining millionaire, sounds good. They are planning a home for something like 175,000 chickens.

Quisenberry certainly made a good race. Thank your friends, Tom.

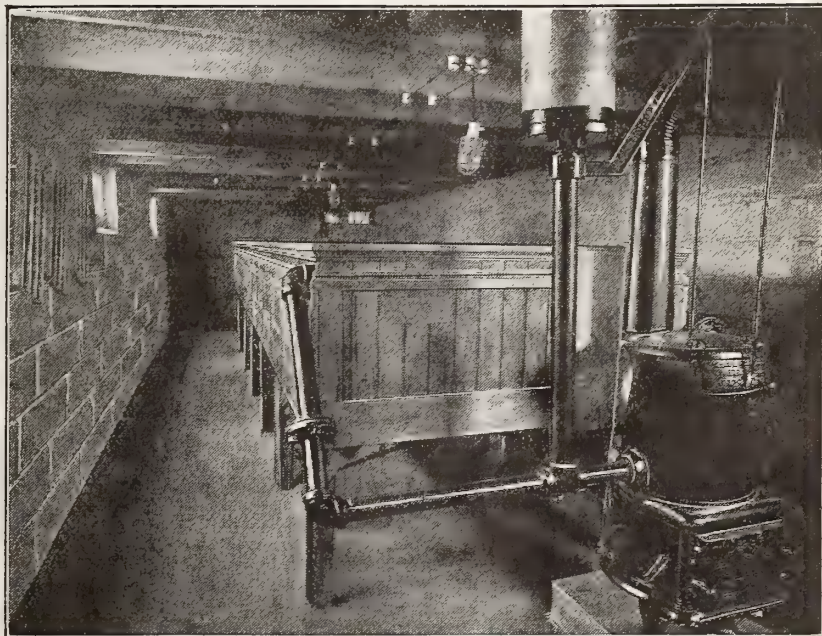

—————0—————

Question: (1) Would you consider ten acres enough land for a poultry farm? (2) How many ducks or chickens can be kept to the acre, giving them ample room—that is, for egg production for common market and for breeding purposes? (3) Can one man care for one thousand ducks or chickens with the necessary equipment?

J. W. C.

Otterburn, Ind.

Answer: (1) Yes. (2) From 300 to 500. (3) Yes.

A 3,600 Egg Hall Mammoth Incubator on Kenotin Farm, Washington Mills, New York.

BECAUSE OF THEIR UNEQUALED UTILITY, THE HALL EQUIPMENTS ARE THE MOST PROFITABLE INVESTMENT.

New York City, May 10, '10.

If I were to buy an incubator to hatch chickens I would rather invest my money in a Hall Mammoth than anything else now on the market.

The Hall Mammoth Incubator controls temperature simply and efficiently, permits a diffusion of oxygen into the egg-chambers, and the moisture carrying capacity of the air is not increased to a point of excessive evaporation.

The Hall Brooder System is as unique and unexcelled in its simplicity and efficiency as the incubator.

The Hall System of Incubation and Brooding is practically fool-proof—and that is saying a lot.

MILO M. HASTINGS,

Ex-Commercial Poultry Investigator U. S. Department of Agriculture.

It pays to heed the men who know,—who know the poultry business from way back in history,—who have by experience learned the best ways.

The Hall Mammoth Incubator and the Hall Brooder System are the modern equipments for hatching and brooding.

Send for the Hall Catalog.

DOES POULTRY ADVERTISING ENERGETICALLY DONE PAY?

By Amos Burhans, Waterville, Minn.

THE world is the field of the poultry advertiser. All advertising is grist to the mill that furthers his name in poultry journal, daily paper and live-stock journal. Just that amount of energy that he puts into his work will show itself in his advertising and the results will show what sort of a booster he is for the game we are all playing. A name associated with a breed of fowls may not have the address attached, but just the same it is advertising that will in the end do the breeder good. If I see the name of a man who is doing something that interests me, I remember it. It is the same with all Americans, I am sure, for I am just one of the average readers. I let what I have read sink into my brain and later I am sure to find something more about the same topic. Then I am interested. From that time on I run

BUFF ORPINGTON.

First prize hen at Jackson, Mich. Weight, 9½. Property of Valley Poultry Farm, Galesburg, Mich.

across a lot of things that are along the same line. I have come to watch for them and I find them. You, reader, are probably aware of the same coincidences. Had you not been interested in the subject which you are daily picking items up about, you would have passed over them because you were not interested. We all recall something we have read about a matter in which we became interested, but when we turn to lay hands on it again it has gone.

And it is thus about things poultry. Today you read about a certain breed of fowls or a breeder of more than the usual ability, and the chances are that at some future time you will want to get that same article again. Perhaps you read only headings. Many a thing that would interest you now has been skimmed over in the past to your present sorrow. For a few years the poultry doings of Ernest Kellerstrass have been commanding more than the usual amount of poultry journal and news paper space. Folks who read them may not at the time be interested in the matter they pursue, but sooner or later they get in the poultry habit and then they want some information just such as they have read. Mr. Kellerstrass' advertising in the poultry journals has been such as caused, from time to time, many newspaper stories about his meth-

IRON AGE

Wheel Hoe, Hill and Drill Seeder.

Whether the man of the house or the lady of the house or the small boy makes the garden, all of the necessary work is easily done when you use one of these tools. Does A. DAY'S WORK IN 50 MINUTES.

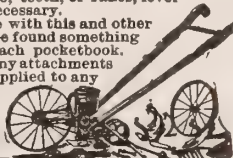

Not only does this tool do the work more easily and better than in the old way, but you can get over your ground more often, keep the weeds out entirely and keep all of the moisture by constant cultivation. You can open furrows, sow seed and cover and roll it, mark your next row, trim out the weeds and cultivate with hoe, teeth, or rakes, level the piece of ground, ridge your rows, if necessary.

Thirty or more combinations are made with this and other "Iron Age" garden tools—in the line will be found something to fit each one's particular needs and each pocketbook.

Prices run from \$2.50 to \$12.00. A great many attachments are furnished and made so they can be applied to any one of several tools, old as well as new.

Write for complete "Iron Age" catalog to-day and see which one answers your purpose best. Address

BATEMAN MFG CO., Box 563 Grenloch, N.J.

ods of breeding and what sort of fowls he raised and other matters, all more or less of an advertising nature. Beginners in poultry culture wanted to know more about this man and his fowls, and how he produced such good layers and such a strain of heavy winners. I have seen whole articles lifted from the poultry journals run in the general papers all over the country. In a great many country papers scattered here, there and yonder, will be found small poultry departments of a more or less serious nature, and the editors of them run across the great profits made by Mr. Kellerstrass and the value of his birds in some of the newspapers and other mediums, and these are clipped and rewritten, and some are so twisted as to be really funny and ridiculous.

But all that has appeared is good advertising for Mr. Kellerstrass. It has made the name of this breeder chanted throughout the whole of a number of countries across the water and quite extensively here at home. In the end it has sold stock and eggs for this man, who has not been afraid of breeding the best and advertising the fact. This is what counts in an advertising campaign. Smaller breeders, who have never been in a position to know just what amount of business this breeder is doing, would be satisfied if they could do in a lifetime the same amount of business that this man does in one season. It is the nature of Mr. Kellerstrass to go into whatever he undertakes just as deep at the first jump of the ticket as some folks would tackle after twenty years of gleaning the know hows of the business.

It is safe to say that a great share of the business of this breeder comes from folks who never owned a pure bred bird until they bought their first setting of eggs or pen of breeding stock from him. There is a fact covered in this statement that a good many breeders could use to advantage if they but dug it out. The White Orpingtons have been a meritorious bird and are growing even more popular. Business which Mr. Kellerstrass cannot care for this year he has had to return to the senders to the amount of \$5,044.40 for the two months of February and March. I have the names of those who have placed orders with him for this amount of stock and eggs and the individual remittance of each sender. I also know that during April and May this breeder had to return another great amount of money which he could not furnish the stock and eggs for this season, and a large amount of which was again sent him, the remitters saying, "book me for 1911."

These items show that advertising does pay. And another thing: This season there has been a grand advance in the prices of eggs for hatching among all the leading breeders. Advertisers and breeders who thought, before the Kellerstrass successes began to make their appearance, that buyers would not pay for the best they had to offer, found that there was an awaiting public ready to purchase eggs at the highest prices ever known. Some few advertisers have gone wild, however, and are asking large sums for average stuff, and the result is that they are not doing much business. There is something to getting good money for pure bred stock and eggs beside claiming that you have it. Folks will be shown. We have already given this man Kellerstrass credit for doing more to raise the plane of the poultry business beyond that of a plaything, and we herewith present

more evidence that there is a good demand for the best that can be produced, at scarcely no matter what the price asked.

Read this. It was written by Mr. Kellerstrass to the gentleman whose name will be found on the reply as we give it below:

" * * * I also note what you say about the setting of eggs from the pen of birds that I wrote you about. Now, Mr. Burns, you say in your letter: 'Wire

me what the price will be,' and when can I spare you a setting? Well, Mr. Burns, I didn't wire you for several reasons. I have to write you, and go into detail about this matter. This pen of birds consists of four females and one male that my wife and daughter have in a pen to themselves here on the farm. We don't show them to everyone who comes here, because if we did they would all want to buy eggs from that kind of birds, and that is something that we

7% and a Double BONUS

We are selling to poultry farmers and to investors generally a small block of our Preferred Stock and with each Share bought we are giving two Shares of our Common Stock **free** as a Bonus. This sale will continue on this basis until **this first block** of Preferred Stock is sold. The Preferred Stock will pay dividends of 7 per cent from the date of issue. The Common Stock will not pay any dividends this year, but it is expected that next year the Common Stock will pay a reasonably good dividend.

EGGS

The business is eggs. New York City eats nearly **four million eggs every day**; most of them stale. We are the first people to supply absolutely fresh eggs to New York consumers in sealed and dated packages and guaranteed not more than one day old. We jumped to success in a month and every week now shows hundreds of dozens increase on the week before. We sell entirely **through the grocers** and to keep up with our orders has required continuous hustle. We have contracts with several of the biggest egg farms within a radius of 200 miles and we are arranging to go out 500 miles to points from which express can reach New York over night. Some of the farms supplying us have as many as 10,000 White Leghorn hens. Our advertising is appearing regularly in the New York City daily newspapers and in a few weeks "**16-Hour Eggs**" will be advertised in New York street cars and electric trains. The eggs gathered on the farms today are in the grocers' hands tomorrow. Grocers do not order any more than they need for the day. The idea is taking immensely and at the present rate of weekly increase we shall be selling **10,000 dozens a day** within a year. Of course we anticipate a scarcity of eggs in the winter and shall advance our retail prices accordingly.

These Shares are being sold to fit out the enterprise at once with automobile deliveries and when the superior quality of our eggs is known and our delivery organization is perfected we hope to make a net profit sufficiently large to pay good dividends upon both Preferred and Common Stock. Eggs sold in New York City last winter as high as \$1.00 per dozen. We have never sold lower than 40 cents and our average price for the year will be above 50 cents per dozen. The buyers of Shares now get in **at the very beginning of the enterprise**. Shares are \$10 each. Send \$10 or \$20 or \$50 or \$100 or \$500 or \$1000 and get your shares and Bonus Stock at once, or if before subscribing you want additional particulars, send for our circular entitled "**Four Million Eggs a Day.**"

don't have. There is one female in this pen of birds which is now four years old, and she actually weighs between 14 and 15 pounds. Two of them go over 12 pounds, and the fourth goes between 9 and 10 pounds. The male bird is the grandest male bird I ever owned, and that is saying a whole lot; he is even far better than 'Crystal King,' and you know that is saying a whole lot. I have never quoted this pen, nor any of the eggs from this pen in any of my mating lists or catalogues, nor even spoken about them. I have quoted prices to a few of my friends and breeders on eggs from this pen, and have sold some eggs from this pen, but now, steady your nerves, because I am going to tell you that the eggs from this pen will cost you just \$10 each, or \$150 a setting, and I have never had to ask a man a second time to buy an egg from these birds, and there are certain breeders in certain localities to whom I would not sell those eggs, because I might have to show against them, but I know that you like to have good birds; in fact, you like to have as good as anybody has, and that is the reason I wrote you about this pen on the 14th.

"Now, if this will interest you, just let me know, and I will send you a setting of eggs from this pen, upon receipt of your order; that is, within four, five or six days after I get your order. We are getting two and three eggs from this pen a day right along. Last week we got three or four eggs a day from this pen. They are all laying right now, but how much longer they will keep it up, of course, I don't know, and you know that they are liable to go broody all at once, so, as I say, if this interests you, and you want some of those eggs, all well and good. I assure you that if you hatch one or two out of this setting that you will not take twice or three times the price you paid me for the eggs, for one of the birds."

Good Poultry Land

5 Acres \$125

\$5 Down, \$5 Monthly

Soil and climate have a great deal to do with the successful raising of chickens and squabs for commercial purposes. This land in Southern New Jersey is only 19 miles from Atlantic City. It is clean and dry and the mild climate is conducive to winter laying and early broilers, which bring best prices.

Berries, fruit and vegetables can be produced with good success, insuring an income from the land during practically the entire year.

Within easy shipping distance of the best markets of the country—New York, Philadelphia, Baltimore, Washington and the Jersey Coast resorts. Two main line railroads, large manufacturing town and navigable river nearby. Title insured. White people only. Booklet free. Write today.

Following is the reply and the formal order for the \$150 setting of eggs, which I think holds the record for being the highest figure ever received for eggs for hatching up to this time, nothing in the past having approached it:

The Portland Gold Mining Company.

Colorado Springs, Colo.,

April 25, 1910.

Mr. Ernest Kellerstrass,
Kellerstrass Poultry Farm,
Kansas City, Mo.

My Dear Kellerstrass: I am in receipt of your favor of the 21st, in regard to a setting of eggs from the special pen which you mention. If it was not for your reputation and the dealings that I have heretofore had with you, I would not think of paying you any such sum for a single setting or eggs, but as you say they are worth the money, I will take your word for it and enclose herewith my check for \$150.

Please send the eggs by Wells-Fargo Express, notifying me by wire as soon as shipment is made. Yours very truly,
(Agd.) Thos. F. Burns.

White Orpington breeders all over the country are experiencing a good demand for what they are offering. The advertising of Mr. Kellerstrass has not only brought him business, but it brings it to all Orpington breeders and to advertisers of Kellerstrass strain in particular. The next few years are going to be Orpington years. We can all see which way the wind blows. The energetic advertising has paid. It will always pay. Push an article and there will be a demand for it. Enthusiasm is contagious.

Tell your friends about the good things in American Poultry Journal. They will be interested and thank you.

W. Etzensperger - Willoughby, Ohio

THE PRIMO FEED COMPANY, HARRISBURG, PA.

The manufacture of feed for domestic animals has become an immense business, carried on by large corporations, the purpose of which should be the employment of honest principles in the use of whole grains and their by-products properly compounded for the production of the desired results.

A short time ago the Pennsylvania Primo Feed Company, of Harrisburg, Pa., was incorporated under the laws of the state of Pennsylvania for the purpose of manufacturing feeds. Owing to the condition of the feed market in Pennsylvania, the demand for absolutely pure feeds was very apparent, and to help meet this demand the company was organized. It commenced operation in a very modest way. A small room was rented in which the feeds were prepared by mixing the proper proportions of raw materials by means of shovels. No refuse of little or no feeding value was utilized in compounding these Primo feeds.

At that time the company manufactured Golden Dairy Feed, Hercules Horse Feed, Matchless Egg Maker and Little Jewel Chick Feed. It was not long, however, before it was very apparent that better accommodations were needed, and a building was secured in which was installed such machinery as was necessary to secure an output of seven or eight tons per day. Owing to the fact that these feeds were free from any form of adulteration, their demand began to rapidly increase and in a few months the company purchased a building 60x100 feet and three stories high, situated along the main line of the Pennsylvania railroad. This building was equipped in such a manner as to enable the production of about twenty tons of feed per day, but even then in a comparatively short time it was impossible to fill all orders for Primo products, and the problem of increasing the capacity must be solved.

About eight months ago Prof. F. D. Fuller, chief of the cattle, food and grain investigation laboratory of the United States Department of Agriculture at Washington, resigned to accept the position of general manager and chemist of the Pennsylvania Primo Feed Company. Mr. Fuller at once employed the services of an expert millwright, L. E. Heiss, of Baltimore, Md., who is superintendent of the mill, and plans were prepared to remodel the plant so as to secure an output of 75 to 100 tons per day.

The board of directors gave the contract to furnish the necessary machinery to the Nordyke & Marmon Company, of Indianapolis, Ind. This work has been completed, resulting in a plant thoroughly equipped with the most modern time and labor-saving machinery on the market at the present time. For the purpose in which this plant will be used it is without any question the best equipped of any in the eastern part of the United States.

The company has installed a 145-horsepower Fleming engine, made in Harrisburg, which will run the machinery with the exception of the bag-closing machine, which will be operated by an electric motor. The plant is well located as far as railway facilities are concerned, and it expects in the near future to erect a much larger mill in

The Buffalo Incubator

Made by

Chas. A. Cyphers

Has Made Good

THE Crystal Springs Poultry Co., Oil City, Pa., markets 75,000 ducks and chickens per annum. The following letter from them speaks volumes:

"Have just completed a hatch with the Buffalo Incubator, and beg to advise you that it is the largest per cent of fertile eggs taken off this season—ninety-three per cent.

"We have ninety-seven machines of different makes, but the Buffalo is far superior to any of them. It takes less to heat it, is more easily regulated, is scientifically simplified in every respect, and certainly far ahead of any incubator upon the market today. After my thirty years practical experience in the poultry business, I say to you, do not change it. In the Buffalo you have a world beater."—Patrick McEvoy, Mgr.

Send your order today. Prompt shipment guaranteed. State size wanted and enclose price with order. I guarantee the Buffalo in every way to be the best incubator ever offered at any price.

addition to the present one upon the ground now in its possession.

The Pennsylvania Primo Feed Company manufactures ten brands of feed for horses, mules, cattle, hogs, poultry and pigeons. Prof. Fuller, who has had wide experience as chemist for the state of Pennsylvania and the United States government, gives his undivided attention to this business, which facts of themselves insure absolute purity of the output and compounding of the ingredients along scientific lines. It is his purpose to use only the best ingredients in order to obtain an honest product and sell it for what it is really worth in feeding value after paying the necessary expense connected with its manufacture, being satisfied with a low margin of profit.

The officers of the Pennsylvania Primo Feed Company are as follows: W. J. Calder, president; Isaac Freed, vice-president; R. A. Carl, secretary and treasurer; Prof. F. D. Fuller, general manager-chemist.

H. P. Schwab.

ONE OF MICHIGAN'S BEST POULTRY FARMS.

For poultry raising Michigan is just gaining prominence as combining several natural features which go hand in hand toward making this state more popular every year as a place to establish a poultry farm. Among many of these desirable features is the high and dry gravel soil, which alone are essentials for growing poultry, and fruit of all kinds found in such climatic conditions are seen at their best. So it is not uncommon nowadays to find successful poultry plants in most any section of the state. One of the best farms to be found is just on the edge of the pretty little town of Galesburg, near Kalamazoo, and along the line of the famous third-rail electric railroad from Jackson to Kalamazoo, where you travel with every comfort a steam line furnishes as far as speed goes, anyway.

Just as you are about to enter Galesburg from the east you will discover by a glance from the car window to the right "Valley View Farm," owned by W. S. Kirby. Mr. Kirby was at one time a prominent horse breeder of the state, but late years his attention has been given entirely to poultry, and after trying out several standard breeds Mr. Kirby now keeps Buff, Black and White Orpingtons and Rhode Island Reds.

Some of the best quality of the land is found at Valley View Farm, as the best formulation stock possible to buy was used here. With careful and intelligent effort the stock has been brought up to a very high degree of merit, and when the writer visited the farm a short time since it was an agreeable surprise to see such large numbers of real good birds. One special pen of Reds was remarkable for uniform coloring and shape, and were it possible to enumerate the many good Orpingtons seen there it would take a page or two to say all that could be said.

Blacks of mammoth size with good shape, with color as good as possible to find, and Buffs of equal quality in every way. Last season Valley View Farm exhibited at several of Michigan's local shows and in every instance won a large share of prizes. We look forward in the near future to seeing this farm one of the first in the land, and without any question in our mind

customers who send money to "Valley View Farm" gets their value and a little over besides. W. E. Stanfield.

GROVE HILL POULTRY YARDS IN LINE WITH REDUCED PRICE ON EGGS.

We have just received a letter from A. C. Smith, manager of the Grove Hill Poultry Yards, Waltham, Mass., in which he informs us that they will reduce the price of their eggs for the balance of the season. This is the first time Grove Hill has reduced its price on eggs, and affords the breeders an opportunity that they will not be backward in accepting—the advantage is with them. In his letter Mr. Smith says: "The quality of our matings has even been improved since you were here, as a few of the females that did not hold their plumage have been eliminated and our pens are now down to four or five females each. We do not select any one female in these yards for ourselves, but give our customers the benefit of them just as they are." To this we would add that we described these matings in our May issue. They are undoubtedly the best Grove Hill ever had, and when we consider their show record with this it is saying a great deal. No matter what their price is, their goods are worth it; and we consider that in this reduction sale the buyer is to be congratulated, for we have often seen the results of their quality. Several of their New York winners have been hatched in June, similar to others elsewhere mentioned. H. P. Schwab.

STANDARD HATCHERY ASSIGNS.

Just as we are going to press we received notice that the Standard Hatchery, Attica, Ohio, has made an assignment for the benefit of the creditors. All those having claims against the Standard Hatchery should at once file their claim with Roy C. Carpenter, Attica, Ohio, who has been appointed assignee.

Question: What is the cause of last year's S. C. Brown Leghorn hens being baldheaded. They are laying nicely without a male being with them, and I fumigate the roosting apartment (8x10x8 feet) with 5 pounds sulphur. They are also clean of lice. I have 20 of them and about six are bald, some more than others. F. G. R.

Morton Park, Ill.

Answer: This is caused by what is known as the depluming mite. Frequent applications of sulphur ointment or lard and sulphur will remedy the trouble.

Hens Produce Honest Eggs

GEO. H. LEE CO., 1101 Harney Street, Omaha, Neb.

Geo. H. Lee produces honest incubators and brooders. His 1910 Mandy Lee Incubator removes guesswork from hatching. The poultry raising industry has greater possibilities than ever before. QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question: (1) Which are the best utility chickens, the Buff Orpington, Rhode Island Reds, Barred Plymouth Rocks, Silver, Golden, White or Buff Wyandottes, or the Black Langshans? (2) Which is the best breed from above variety for a yard breeder?

Waterville, Kas.

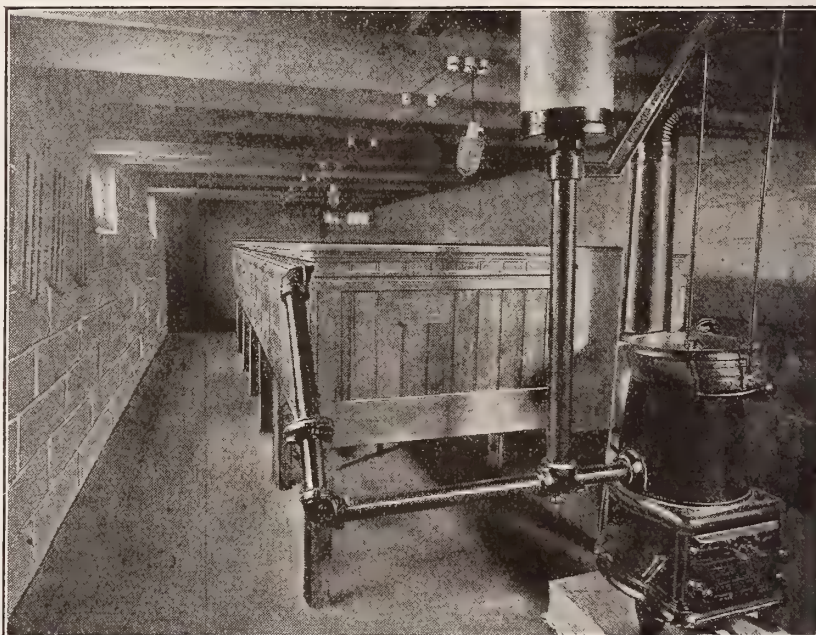

B. E. A.

Answer: (1) Any one of these varieties will give you satisfaction as a utility fowl. We never recommend one above another, as it is merely a matter of opinion as to which is best. (2) The same answer as given to question 1 holds good in this case.

Question: (1) What can I do for chicks from one to four weeks old? Vents will cake dry, and we loose from

add a little powdered cinnamon. (2) This is caused by a lack of animal food. Give a little fresh meat chopped fine and also give them small seeds in scratching material to keep them busy. (3) This hen is evidently suffering with a diseased liver. See Poultry Doctor for treatment of this disease. Price 50 cents, for sale by us. Improper feeding has caused the trouble in your little chicks. Bathe the parts with warm water, to which has been added a little witchhazel. Supply your little chicks with plenty of small, sharp grit.

Question: Will you please give me information as to the following: "A" hatches ten White Leghorn pullets (thoroughbred), which start laying

A 3,600-egg Hall Mammoth Incubator on Kenotin Farm, Washington Mills, N. Y.

four to six a day. (2) What is the cause of little chicks picking each others' toes. They will pick the toes almost off, then chick will only live about twelve hours. We give them meat scraps quite often. (3) Have a hen that mopes around and don't eat much; comb is very red, and droppings are soft and slimy; also have chick about eight weeks old that has something like piles and a white discharge. Sawtelle, Cal.

J. H. B.

Answer: (1) This condition is brought about by diarrhoea, which is caused by improper feeding or lice. Wash the parts with warm water, and after removing the accumulation dry and apply a little vaseline. Give boiled milk to drink and boiled rice to eat, to which

when four months and twenty-five days old, and continue to lay daily.

"B" hatches fourteen White Leghorn pullets from the same stock, which are one month younger than those of "A." "B's" pullets are now six months old and have not yet laid. What caused the pullets of "A" to lay so soon, and is it not risking a chance to force chickens to lay so soon? "B" feeds his Leghorns "Corno" for breakfast, moistened bran with a sprinkling of "Pratt's Food" for dinner; also green food and "Corno" for night. "A" hopper fed with three sections, each containing charcoal, dry bran and a mixture of lime and oyster shells is before them all the time; also cool, clean water. Whose chickens are doing

Wertzberger Bros., Care Merchants Hotel, Altoona, Penna.

the best? The pullets of "A" are twice as large as those of "B," "B's" Leghorns are in good health with yellow legs, bright red combs and a plumage as white as chalk; never been lousy or sick. "A" has trouble with lice.

I am desirous of finding out why the pullets of "A" started laying so soon, and why haven't those of "B" started laying? "A's" were hatched in October and "B's" in November.

Warrington, Fla.

C. E. W.

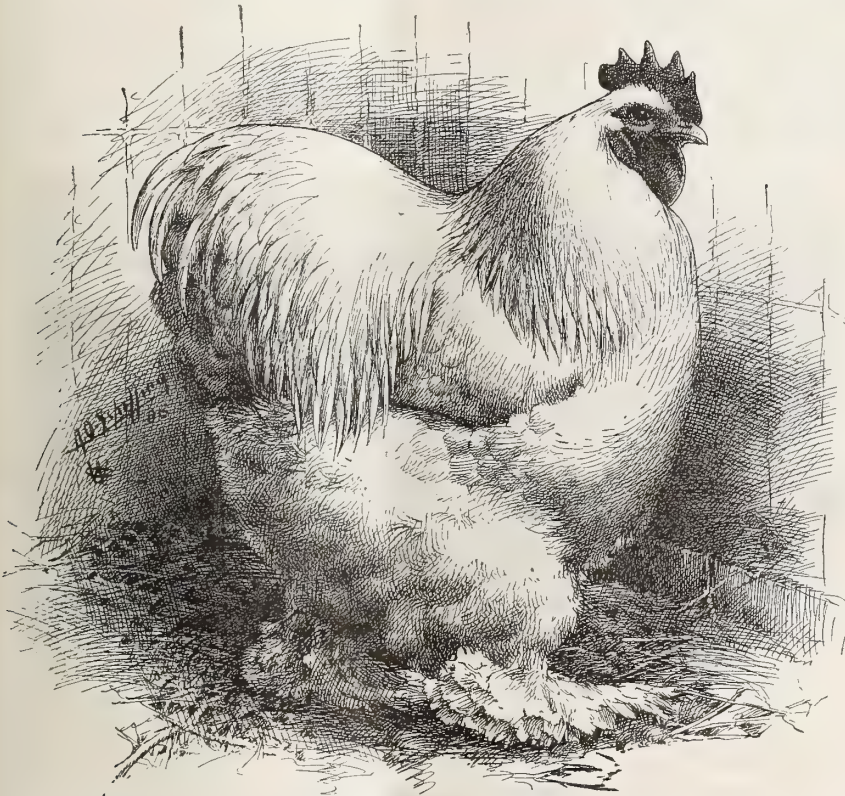

Answer: Results are what count in any business, and if "A's" system of feed and care caused his pullets to lay at four months, it is very evident that his system was the best. It is not always advisable to force chicks to lay too early unless they are well matured; but "A's" system no doubt brought his pullets to maturity quicker than

and how? (8) I have a roosting coop 10x16 and a scratching shed 10x16 for winter and two runs of about 1,000 square feet each which I use alternately each week in summer. How many hens can I keep without crowding in winter or in summer?

A. M.

Iron Belt, Wis.

Answer: (1) Space will not permit us to answer this question the way it should be. Our book, "Why Poultry Pays and How to Make It Pay," explains line-breeding in detail. Price, 50 cents. (2) Alfalfa meal is a good substitute in the winter for green food. Two quarts to fifty hens three or four times a week is sufficient. (3) Better results are obtained when the wheat is fed dry. (4) They are both good, and it is sometimes necessary to use both. (5) It probably will. (6) For laying hens and growing chicks. This

WHITE COCHIN COCK.

First at Madison Square Garden, New York, 1910. Owned by J. B. Cornish, Jr., Washington, N. J.

"B's." This also demonstrates that hopper feeding is all its advocates claim for it.

Question: (1) What is the difference between line breeding and inbreeding, and the result of each? (2) Will alfalfa clover meal take the place of green food, and about how much should be fed to fifty laying hens? (3) If I pour warm water on wheat and let it stand for twenty-four hours it will be sprouted. Is this good for chickens or is it too sour? (4) Which do you advise using for lice and mites, a powder or liquid lice killer? (5) I use crude carbolic acid for a disinfectant. Will it spoil eggs for hatching if they come in contact with it? (6) For what is beef scraps used, laying hens or to fatten for market, and about how much should be fed? (7) Can chickens be so mated that the majority of chicks hatched will be cockerels or pullets,

can be kept before the birds at all times so they can eat as much or as little as they desire. (7) No. (8) Twenty-five.

Question: What is the cause of crop-bound?

Mrs. J. N. S.

Memphis, Tenn.

Answer: This is usually caused by the fowls eating an abundance of indigestible material—most frequently long hay; but is sometimes caused by the passage from the crop becoming obstructed.

F. Gage Cutler, Carthage, Ill., the well-known breeder, is making a special sale this month, and it will pay you to look up his ad in this issue, as he is offering some wonderful bargains in Barred and White Rocks, White Wyandottes, Buff Orpingtons, Bronze and Bourbon Red Turkeys, Pekin and Indian Runner Ducks. See his ad for prices and particulars.

100% A YEAR For Twenty Years To Cow Owners

That's the marvelously good investment that nearly 1,200,000 satisfied users are finding the

DE LAVAL CREAM SEPARATOR

With one or more cows the corresponding size of DE LAVAL separator saves its cost the first year, in more and better product and less labor, and it may be depended upon to go on doing so for twenty years, as there are already thousands of instances to prove.

There's half this much saving in the use of a DE LAVAL over inferior separators, while other separators last but from six months to five years instead of twenty years. They lose half that might be saved while they do last.

That's the whole separator story in a "nut shell" and the reason for the now nearly universal sale of DE LAVAL cream separators.

A DE LAVAL catalogue may be had for the asking. Likewise the trial of a DE LAVAL machine.

LETTERS from our SUBSCRIBERS

Editor American Poultry Journal.

Dear Sir: Answering your request for reports on open and cloth front poultry house, we give you our experience as below:

Our poultry house is 100 feet long, 14 feet wide, shed roof. Front facing south, 9 feet high, back wall 6 feet high.

It is near top of a hill and the back is built into the bank, leaving about 3 feet above the bank.

The house has a partition every ten feet, making ten houses.

The front of each house has a curtain 6x6½ feet, of common unbleached muslin. In the rear of building is an alley three feet in width, boarded up for four feet. In front of the boarding are the nests, on ground level; dropping boards above, with roosts 2x2, with rounded edges, above dropping boards and hinged so they can be raised when cleaning platforms. The ends, roof and back of house are covered with two-ply roofing. Dirt floor, as the drainage is perfect and the soil is gravel.

As you probably know, the winters here are not long. Still, we have fairly extreme weather in January. In January, 1909, three days about 20 below. January 1910, nothing lower than 10 below, but two weeks about the zero mark and two or three nights about 10 below.

We expected to use curtains in front of roosts, but in the weather as above did not find it necessary.

At no time has there been a sign of a frosted comb, and the birds have been entirely free from colds.

We have a good winter production of eggs and are firm believers in the muslin fronts.

Have had no experience with open fronts. The Wyandotte Ranch, Spokane, Wash.

Editor American Poultry Journal.

Dear Sir: In regard to the open front house, will say I have used same for a number of years and find them far better than the old style. I breed Buff and Barred Plymouth Rocks and Buff Orpingtons, and use open-front breeding houses, and I have some of the finest stock it has ever been my good fortune to see. I never have a sick bird, and they are regular "egg machines." They meet me

at the door with a song every morning and all day long they scratch and hustle. By night the egg basket is heaping. My young stock is growing like weeds! I use the open front with them and they are so fine and vigorous it is a joy to see them. They have the range of a cherry orchard and they are always on the move. I will have some beauties for sale this fall, of each breed. My Buffs are buff, and no mistake, and the Barred Rocks are certainly grand. I attribute my success in a great measure to the fresh air. After my young stock is three

CURTAIN FRONT HOUSES.

weeks old I put them in the open-front house built expressly for them. I do not use the heated brooder, as it in my estimation is not nearly so good as the lampless, and I have used both. We have had a very backward spring, but I have now nearly 500 chicks, all doing well, and I think their great vigor and size is owing to the parent stock being in such excellent condition.

H. L. Ragsdall.

Centralia, Ill.

Editor American Poultry Journal.

Dear Sir: In your April number you ask for articles on the curtain front house. I send you herewith a photograph of the style of house I have been

using for several years and they have given perfect satisfaction. My houses are 12 feet long and 10 feet wide, with a shed roof 7 feet high in front and 5 feet high at the back, these houses all face the south. The door is in the east side, the sides and roof are made of 12-inch lumber with all the cracks covered with thin strips. The roofs on most of my house are covered with rubberoid roofing, which gives good satisfaction if the boards are laid close together. Now in regard to the front I put one 12-inch board across the bottom, one 2 by 4 up and down in the center and one crosswise, I cover the whole front with wire netting and over the lower half I hang a curtain of burlap 3 feet wide and 12 feet long, with a 1 by 4 strip nailed to the bottom so it can be rolled up to the center and tied. The upper half of the front is inclosed by one long or two short doors which are hung on hinges at the top, when I wish to open them I just hook them up to the roof on the inside, and by rolling the curtain up at the same time I have the whole front of the house open. That is the way I use it in summer except in

case of a storm. In winter I always open the doors in the upper half of the front and let the sunshine in as much as possible. The bright light and sun inside of my poultry houses is worth more to me than all the lice powder there is. There are no dark corners in this house and I regulate the front to compare with the weather. There is a dropping board 4 feet wide and three 2 by 4 roosts, which are hung by wires to the roof and each roost is hung directly over the crack in the dropping board, the droppings fall in the center of the boards, causing them to warp up, which makes the boards easy to clean with a hoe. The dropping boards are about 3 feet high and the roosts 1 foot above

that, with the nest boxes underneath the dropping board. This house is plenty large enough for fifty Leghorns, and I have never had a case of roup in one of these houses. The temperature went as low as 23 below several times last winter and there were no combs frosted while the fowls were kept inside. I know that hens will lay well in these houses, for I got eggs all winter and 50 cents a dozen for them.

White Leghorn Poultry Farm.
Twin Falls, Ida.

Editor American Poultry Journal.

Dear Sir: I would like to suggest to those who find yellow corn affects the color of white or black fowls that rice is as good a feed as corn in every way, will not affect the color in the way of making white fowls brassy nor black fowls purple.

In addition rice is free from the mold that attacks corn and results in so much disease.

Rice is a completer food than corn and in every way to be preferred.

As a forcing food it is the best I know of.

I am now feeding absolutely no corn,

Cuckoo Wyandotte pullet from first pen Madison Square Garden, 1910. Bred and owned by E. L. Geisel, Morganville, N. J.

but I am feeding a great deal of rice, and shall continue to feed broken rice to growing chicks and the whole rice with the paddy on, or rough rice as it is called, to the grown fowls, or those fowls big enough to eat the rough rice.

For net results I regard rice as the cheapest as well as the best feed obtainable.

Milton W. Brown,
Station L, Cincinnati, O.

Editor American Poultry Journal.

Dear Sir: I notice in your last issue that your eastern representative has first Indianapolis S. C. B. Minorca hen 1909 located in the yards of a prominent breeder in New Jersey. This is clearly a mistake, as I have the first hens of 1908, 1909 and 1910. At Indianapolis, 1909, I won first, third and fifth on these entries, and in 1910 first and second on two entries. This has been a very successful season with me and I have now all the orders for eggs and stock that I care to fill.

E. E. Wilson.
Indianapolis, Ind.

Editor American Poultry Journal.

Dear Sir: In the May issue of the American Poultry Journal I noticed in the Questions and Answers Department

Robert H. Essex

Earth—on the green grass if possible; let them hunt up bugs, worms and flies. If the weather is dry or insects few, get **MODEL NUTRINE CHICK SALTS**, which fulfills every need for animal and mineral food; builds bone, sinews and produces feathers. **Nutrine Salts** by aiding digestion, prevents diarrhea and "going light" in chicks. These Salts are not a purgative, but a tissue builder, and a wonderfully effective food-salt. Costs five cents a week for fifty chicks. A dollar or so spent now on **Lice Dust** that is really good, **Lice Spray** that is really effective, is the best investment you can make. Start your chicks right and see that you get the best goods for your money. **Model Supplies are Superior.** See list below.

Model Incubators, Brooders and All Kinds of Poultry Supplies

IF YOU USE CARE in choosing your supplies, you not only save money, but save chicks. Let your **Food Holders** and **Wall Founts** be of good, heavy galvanized iron and well made, especially when they cost no more than the low-grade kind; and above all, be sure to Get a **Brooder That Broods**—one that can be depended on to hold an even temperature and to keep your chicks warm; a brooder that provides healthful, fresh atmosphere. **MODEL BROODERS** are so constructed that nothing is left to chance. Yet they are reasonable in price. I you know how many chicks are saved by their use, and how well the chicks thrive in them, you would use no other. Our free catalogue tells you all about the different sizes, from our \$6.00 **Portable Hover** to our **Unequalled Model Colony Brooder** at \$15.00—the cheapest, the best on earth for raising chicks. **Model Incubators** are equally well made. They are used by **Successful Poultry Keepers**, **Experiment Stations** and **Big Poultry and Duck Farms**.

Little Red Hen Poultry Tonic

Formerly Called Fryer's Roup and Cholera Cure and Egg Producing Tonic

This liquid tonic has proven to be such a wonderful cure for so many diseases of chickens that we desire every one interested in raising poultry to know it. It will cure a severe case of Roup in three to five days. Cholera yields as quickly.

Limber Neck can not resist the powerful effects of the tonic. We recently learned of one flock afflicted with Limber Neck to the extent that six to ten hens were dying every day and after 160 fowls had died, the owner began using this wonderful tonic. The effect was noticeable at once. Five hens died the next day and thereafter the entire flock improved rapidly. White Diarrhoea, the "terrible," will disappear so soon as the presence of the Little Red Hen Tonic is known.

As a preventive this tonic is sure. It will aid in keeping the flock in a healthy condition, increases the production of eggs and improves their fertility. This tonic is prepared and shipped in quadruple or four times feeding strength. To one quart add three quarts of water.

One quart, \$1; three quarts, \$2.75; six quarts, \$5. Small bottle, 50c. We also have a 50c mailing size to send postpaid.

Wayne Poultry Tonic Co.

Dear Sirs:—A few weeks ago I purchased a bottle of "The Little Red Hen Poultry Tonic." I began feeding it and it soon proved itself a "Red Ripper" in regard to making my hens lay. It certainly is a great egg producer not to mention its properties as a tonic. I also feed it to my young chicks. The result is that I have not lost a single one.

Very truly yours,

Mrs. W. H. Noll.

Wayne, Poultry Tonic Co., Fort Wayne, Ind.

April 27, 1910.

I bought a bottle of your tonic in January. I had two desperate cases of Roup in my flock. Two hens were so bad I thought they were dead. Upon picking them up in the evening I saw some life and poured down a dose of your tonic. On the following morning they were out hunting for feed. It is by far the best poultry medicine I ever used.

Peter Trier, R. R. 14, Box 15.

Wayne Poultry Tonic Co., Fort Wayne, Ind.

S. C. RHODE ISLAND REDS

Blue Ribbon Strain. At Ashtabula, 1910, in hot competition I won first, second and third pullet, fourth cockerel, first cock, first and third hen and first pen. At Youngstown, 1910, I won first pullet and third hen. My first prize pullet easily won the color special on female and was the sensation of the show. A few cockerels and pullets left for sale. Am now booking eggs at \$2, \$3 and \$5 per fifteen. **Pheasants**—Will also spare a few settings of Ring Neck Pheasant eggs at \$2 per 15. A circular given free with each setting of eggs, telling how we care for and raise young Pheasants. Address all orders

Edgar Briggs

Box A

Pleasant Valley, New York

M. J. I., of Denver, Colo., asks about moisture in an incubator. As this seems to be of wide importance I desire to give my experience in this matter. I have a small machine with side trays for holding water. This spring I started it and used only the side trays for moisture. I had fifty-four eggs at the start and tested out five infertile eggs, giving me forty-nine. Out of the forty-nine twenty-three hatched out, the remainder being unable to break through. The breeder from whom I got my eggs told me it was owing to lack of moisture. I have my machine in the cellar. This breeder told me to use plenty of moisture and he loaned me a hygrometer and showed me how to use it. I made a second run and used two moisture pans underneath the egg tray in addition to the side trays. I changed the water every four or five days. I also sprinkled the eggs and several times dipped them in warm water. The result was that I got a good hatch. I am as yet an amateur, but I have soon learned that you can't get too much moisture. Of course, I am speaking of conditions as they exist here, the climate being very dry. I put the moisture pans in the machine from the start and the result was that the shells were in such condition that the chicks had no trouble in coming out. In fact, by the evening of the twenty-first day there was not an unhatched fertile egg in the machine, there being no holdovers for a day, as on my previous run. G. L. Houle.

Helena, Mont.

Editor American Poultry Journal.

Dear Sir: In the April number you ask for experiences with open-front poultry houses. I have no experience with them, but, like you, I want to know. In most of the descriptions of open-front houses that I have read, double walls are recommended and spaces between roof and ceiling packed with sawdust or some other material. What I want to know is why double walls? If the front is open, the double wall will be no warmer than a good tight single wall and is only an added expense. Have had good success with the old style poultry house with a single wall lined with black neponset, but would like to know more of the open-front plan from someone who has given it a practical test in this latitude. Have the Maine bulletin, but it talks of double walls and open-front. Again, why double walls? Trusting that some of your readers will be able to tell, I am

George Porter.

This department is open to all readers and advertisers in the eastern territory and all are invited to send in all poultry news items that come to their attention. Address H. P. Schwab, eastern representative, Irondequoit, N. Y.

June, the month of Roses and Comets, if you get up at 3 a. m.

Special and reduced price sales of both stock and eggs are now the order. Look up your wants.

As many winter show winners have been hatched in June as in all other months combined.

The poultry associations are again hard at it preparing for next fall's and winter's shows. All records will again be broken.

How did you like our May edition? Guess that artist fellow is not getting out some original things, both in covers and birds.

Earlier and later dates should be considered by the poultry associations. November should prove one of the best show months. A good trial season.

February also should have more shows. Proper conditioning for this will only improve the birds for the trying times of the breeding season.

We hope to follow on with our articles on "The Possibilities of the Poultry Business" in our next. Our re-

cent visit to several of the largest plants has given more ammunition along these lines.

Cochin Bantams are universal favorites and the demand for these little beauties is ever on the increase. In Bufts, one of this country's best flocks is the Yellow Jacket Strain bred by the Elbridge Bantam Yards, Elbridge, N. Y. This line certainly has the true Cochin type with just the proper sound buff color, next to shape and color, head points and toe feathering count for much. We can recommend this strain, note their advertisement and write them your wants.

Now is the time to buy high-grade breeding stock at less than half their value, most of the breeders are now putting on special sales, it is to your advantage to note this, for you can now get stock at fair prices that no money could have bought two months ago.

Charlie Welles reports the best season he has ever had and says, "The demand for 'Fluffy Ruffles' line has broken all records and I am still very busy shipping eggs and hatching some myself. I have every confidence in my matings this year and again look for improved results." We believe he will also

make some little reduction in June egg orders.

Mr. C. F. Webster, Girard, Pa., will sell eggs during June at half price from his five choice matings of White Rocks. Mr. Webster breeds the Graves strain pure and has one of the best flocks we have seen this year. His prices are now \$1.50 and \$2.50 per setting. Get his mating list.

At this writing we haven't the results of the A. P. A. election, still we have the confidence in the breeders to believe that the country is still saved. Let's hope so.

These are busy days at every poultryman's home, and in particular must this be so at the plant of S. G. Hoke & Son, Spring Forge, Pa., with their 65 varieties of poultry, water-fowl and pigeons. Their quality is all they claim, and more, too.

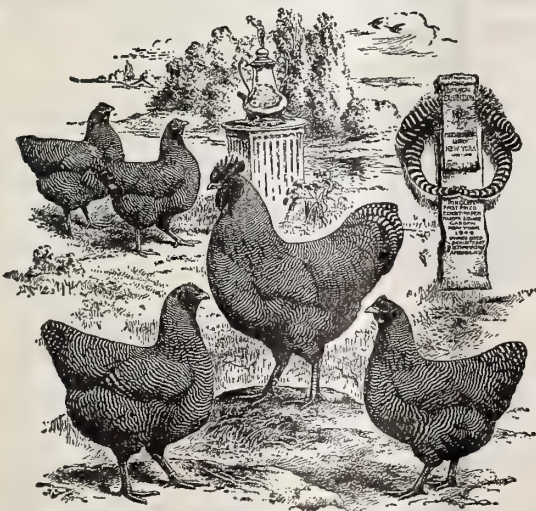

We note that Major Link Orr has again taken up the pencil. Some time ago we declared that renewed interest in poultry was evident, and we can now expect to get some good things between Drev and Link, if they get started right.

We have a letter from an Indiana breeder asking if we thought the comet would spoil eggs in incubation. We thought not, and trust his fears are over ere this.

The old favorite Silver-Laced Wyandotte, as bred by LeRoy W. Seigfried, Waterloo, N. Y., has proved one of the past season's sensations. On sixty entries he won fifty-six regular prizes and most as many specials at New York, Buffalo, Rochester, etc. This includes

"Ringlet" Bargain Sale

For 1910 is the Event in Barred Ply. Rocks

"Ringlet" First Prize Exhibition Pen and Winners of Sweepstakes Silver Cup at Madison Square Garden, New York, 1909

My Special Sale List is now ready for mailing, and I am glad to offer to the people all over the world the most striking price reductions and the most emphatic bargains ever set in type.

This is now the time to call upon the almost unlimited resources of my "Ringlet" Farm and secure New York Winners and Sons and Daughters of New York Winners and birds of this New York line of blood at the marked down bargain prices.

Birds bought at the prices in my Special Sale List will pay you extraordinary dividends

The list covers emphatic bargains in single birds, pairs, trios and breeding pens and lots to meet the needs of all, no matter whether wanted for fine breeding or exhibition in competition that you feel will be the strongest. They are mated by me personally; which insures the best results.

The "Ringlets" are the proud product of more than a quarter of a century of Barred Rock breeding; they have the most fashionable barring and even blue color of the present day. They sell when no others will by reason of their matchless quality. "Ringlets" are known in every land and play their part in the commerce of the world.

It will be to your interest to have this Special Sale List and take advantage of this opportunity to buy now at the cut down bargain prices. It is sound business judgement to buy what you want when offered for dollars less than it is worth---it is justice to yourself and economy. Whatever may be your wants in Barred Plymouth Rocks you will find it in my Special Sale List at Bargain Sale Figures. The List will be mailed promptly upon request.

Eggs from the World's Best Exhibition Matings. Elegant 58-page catalogue upon application.

Both cockerel and pullet breeders from our own pens of 1909-10. Let us price you some of these.

15 Grand Show Males

at half value, we can and will satisfy you.

Schwab Bros., Box 452, Irondequoit, N. Y.

first prize cockerel at Madison Square Garden, New York. We have handled this line and know their quality, which we can recommend. For June and July he will sell eggs at \$2 per 15. His mating list and other information for the asking.

* * *

The bee is like a man. All up
And down the world he beats it;
He gathers honey all his life—
Some other fellow eats it.

* * *

Sunny Side Farm, G. L. Wheeler & Son, Penn Yan, N. Y., have an unusually fine stock in S. C. White Leghorns bred from their Boston, Buffalo and Baltimore winners, we recently wrote them up, their birds have excellent size, full and well-finished tails. They also have reduced the price of their eggs for the balance of this season. They also have about forty very choice breeders for sale at very fair prices, quality considered.

* * *

There are fools of various sizes, but the biggest of all is the one who doesn't profit by the foolishness of the others.

* * *

His Honor the Mayor of Dearborn did find time to write us last week reporting fine business and nicely commenting on what we wrote of some eastern Buff Rock breeders. We want to see more of this feeling of good wishes displayed among the breeders. C. L. Pensyl, J. W. Poley and Sam L. Lapham are three of a kind and hard to beat.

* * *

Here is hoping that the Columbian Plymouth Rocks are admitted to the Standard. President D. M. Green and all the club officers are working to this end.

* * *

The one great secret in growing chicks is to keep them a-growing. Shady runs with plenty of shade and a good variety of food, and plenty of it will bring results.

* * *

Sometimes a stitch in time saves guying.

—o—

BOYS' NATIONAL POULTRY CLUB.

The third annual catalogue of the Boys' National Poultry Club will be issued shortly, and this opportunity is taken to invite all boy poultry and pigeon fanciers to join at once, so that their names may appear in the catalogue. Members in arrears please pay up promptly, as the names of those whose dues have expired will not appear, unless they renew. The annual dues, now 25 cents, will soon be raised to 50 cents. Applicants will please give name, age, address, and variety bred, and mention American Poultry Journal. We are soliciting ads for the catalogue at one dollar per inch.

The executive committee will probably adopt a new constitution, which will accomplish several needed reforms.

Mr. Gren H. Stiles has resigned the office of secretary-treasurer, which is a loss to his fellow members.

The writer is conducting a Boys' Department in "Poultry," which he trusts all members will read, especially the May issue, which is rather important. For a copy of last year's catalogue, or any information, address

E. Lawton Moore, J.,
Secretary-Treasurer,
Wyncote, Pa.

GOOD TO KNOW

by C.W. Zimmer

This department is open to all readers and advertisers in the central territory and they are invited to send in all poultry news items that come to their attention. Address C. W. Zimmer, central representative, Ft. Wayne, Ind.

To My Friends and Advertisers: Owing to illness which confined me to my bed at home I was unable to take care of anyone last month. I am now quite well again and ready to take care of you. Let me hear from you. Wishing you an abundant crop of little chicks, which will develop many prize winners, I am, respectfully,
C. W. Zimmer.

Many breeders offer eggs at half price this month. Better take advantage of this reduction.

It is not yet too late to hatch some chicks which, with a little extra care in providing shade, cool water and freedom from lice, will yet have time to develop into prize winners for the January shows. We always raise some late chicks. Don't try too many; just a few. Only one can win first place, you know.

Do you know that J. G. Budde & Co., Oak Park, Ill., purchased all of the Red Raven Reds of C. W. Zimmer and that they are offering you special prices this month? See ad on inside of front cover.

Have you looked carefully for lice and mites in your coops containing your young chicks? Remember, lice are like a thief in the night. They steal the

lifeblood out of their little bodies and they can't grow into prize-winners. Do you know about "Dustyne"? It works wonders in freeing your chicks from lice. If not, send for booklet. Poultry Dust Bath Co., Box M, Whiting, Ind.

Have you read about the fine prize winning White Orpingtons and White Wyandottes bred by F. D. Sutton, 68 St. Louis avenue, Youngstown, Ohio? He is offering eggs from his fine specimens at half price; also some of his breeders very reasonable.

If you want White Wyandotte eggs from a strain that have won at all our national shows at half price, write George M. Kline, box 64, Downers Grove, Ill.

Blue Boy Barred Rock eggs are now offered you at half price. See ad of Wm. H. Hoover, Route 2, Box 4, Polo, Ill.

Practical Reds is the name given to his strain by Mr. A. G. Clark, owner of Ridge View Farm, Willoughby, O. Mr. Clark has intensified the practical or utility qualities in his strain and he certainly has the longest bodied flock of Reds the writer ever saw. See ad in this issue.

We Lead, Others Follow.

We are pleased to know Mr. Irving A. Sibley, of South Bend, Ind., the well-known breeder of Rose Comb Red, is a candidate for president of the Rhode Island Red Club of America. Mr. Sibley is a successful business man of South Bend, being identified with many of its largest business enterprises, and is recognized as a man of exceptional business ability. That he would make a good president for the club is a settled fact. That Mr. Sibley is a Rhode Island Red enthusiast is also well known by all who have ever talked to Mr. Sibley during the last several years during which time Mr. Sibley has bred some remarkably perfect specimens, which he has exhibited at our prominent shows, always winning a goodly share of the ribbons. Here's success to Sibley.

We are pleased to learn that Mr. P. A. Cook is recovering from the injuries received from a fall in his airship. Mr. Cook is a daring aviator, having made thirty-one successful flights. He then removed part of the steering apparatus thinking to increase the speed, the result being he could not control the machine and received a fall which fortunately was not a very great distance and Mr. Cook escaped with some broken toes, two sprained ankles, a sprained back and many bruises, from which he is now recovering. Mr. Cook is of the well-known firm of Wm. Cook & Sons, originators of all Orpingtons, Scotch Plains, N. J.

One of the neatest and most up-to-date catalogs issued this season is the one put out by Ellis S. Shelly, Williamsburg, Pa. But this is only another evidence of what Rhode Island Red breeders are doing to keep this popular variety before the public at all times. Better send for a copy of this catalog and mention American Poultry Journal.

NO SPECIAL SALE LIST THIS SEASON

but I have a few splendid bargains to offer you in the way of SELECTED BREEDERS, EXHIBITION BIRDS and UTILITY FLOCKS. Write me your wants please and I will name you SPECIAL PRICES.

U. R. FISHEL'S WHITE PLYMOUTH ROCKS

are better than ever. There is no breed to compare with them as egg producers, while as prize winners they stand in a class by themselves. No wonder they are conceded the world over to be "THE BEST IN THE WORLD." Send TWO DIMES for 56-page catalog; worth dollars to any one. Eggs half price now: \$4, 15; \$7, 30; \$12, 60.

U. R. FISHEL : BOX A : HOPE, IND.

BUFF, BLACK & WHITE ORPINGTONS

Coleman bred and sold six Orpingtons that won 5 first and 4 second prizes at Madison Square Garden, Boston and Chicago in one season. An unapproached record. Write for free literature. Stephen Marsh

R.C.R.I. Reds

FOR SALE CHEAP—Twenty-five large shaply Rose Comb females every one a good breeder \$2.50 each. Also several fine cock birds at very reasonable prices. If you want to get some good birds cheap, now is the time to buy, as we must have the room for our young stock coming on. Eggs at half the price the remainder of the season.

Simmons & Crittenden :: Geneva, Ohio

**MARTIN'S REGALS**

EGGS AT HALF PRICE—After June 1, the price of eggs from my fifteen prize pens will be \$2.50 per 15; \$4.50 per 30; \$6 per 45. This is a grand chance to become acquainted with the Regal strain at small cost. Free—Send for Summer Sale List giving description of 179 breeding birds I am offering for sale.

John S. Martin, Box 51, Port Dover, Can.

WHITE ORPINGTONS

They lay like slot machines. At Cleveland in hot competition I cleaned up every first prize but one. I won 1st cock, 1st hen, 1st pullet, 1st pen. Also American Orpington Club specials on White cock, hen, pullet and pen. Also four silver cups, one of them being for best female Orpington (any variety) in the show, awarded by Judge Oke to my hen Bess. At Pittsburgh I won 1st cock, 1st hen, 1st cockerel, 1st pen and special for best display Orpingtons, any variety, Judge Denny. Altogether I have 22 firsts, 12 seconds, 12 thirds, 16 specials, 2 diplomas, 10 silver cups at Cleveland, Madison Square, Chicago, Pittsburgh and other large shows. High class show birds and breeders for sale at reasonable prices. Eggs, \$8 per 12.

SPECIAL SALE I have nearly 2000 youngsters growing like weeds, and must make room. Will sell half my breeders. This is the chance of a lifetime for you to get the finest White Orpington blood in the world at less than half price. I am not selling off a lot of culls or old fat hens and cocks, past their usefulness, but strong, vigorous, active breeders not over 15 months old. Send for bargain list and booklet. Both are free. First orders will get the best selections.

Lawrence Jackson : : Haysville, Pennsylvania

POULTRY JUDGES SELECTED.

The. Hewes, Indianapolis, Ind.; A. F. Kummer, Butler, Pa.; F. J. Marshall, College Park, Ga.; have been selected by the Tri-State Poultry Association to judge at the big poultry show to be held at the great Tri-State fair, Memphis, Tenn., September 27 to October 4. These judges all have a national reputation, and the management should be congratulated on their selection. Exhibitors can depend that they will get a square deal if they show at Memphis. C. L. Baker, secretary, 292 Madison avenue, Memphis, Tenn., will give you any information regarding show. Write him.

BLYTEVILLE, ARK.

For some time past the News has been agitating the breeding of thoroughbred poultry in this section and an annual exhibition. How well we have succeeded you may note when we say an organiza-

tion of thirty-eight charter members was perfected today, every member of which is an ardent enthusiast, with money to back his fancy. The intention of the association is to make of this section a poultry district of both fancy and utility stock. The organization will be known as the Mississippi County Poultry Association.

M. O. Eastin,
Secretary.

AUBURN, IND.

At a recent meeting of the poultry breeders of DeKalb county an organization known as the DeKalb County Poultry Association was perfected, with the following officers: President, Dr. Peter Stukey; vice-president, M. B. Willis; secretary, S. E. Conrad; treasurer, E. E. Shilling; superintendent, E. T. Cochran. The boys are wide awake and will hold the first show in Auburn next winter, and from present indications, it will be a good show, as there are many good birds

in the county at present, and more coming every day, which means increased interest to the public and the industry.

Election of officers of the Oklahoma branch:

PRESIDENT.

Hon. Chas. F. Barrett, Guthrie, received 45 votes.

M. A. Watkins, Enid, received 14 votes.

VICE-PRESIDENT.

Isaac Regier, Enid, received 42 votes.

F. P. Beamer, Guthrie, received 17 votes.

SECRETARY-TREASURER.

W. P. Smalley, Shawnee, received 52 votes.

Will T. Davis, Oklahoma City, received 7 votes.

FOR MEMBER EXECUTIVE BOARD.

District No. 1—M. S. Fite, Pawnee, received 4 votes; C. W. Day, Vinita, received 1 vote.

District No. 2—F. W. Hall, Lone Wolf, received 4 votes.

District No. 3—H. J. Kester, Enid, received 11 votes.

District No. 4—F. W. Hitchcock, Oklahoma City, received 5 votes; A. M. Griffin, Oklahoma City, received 2 votes.

District No. 5—W. M. Longmire, Shawnee, received 22 votes.

District No. 6—Frank E. Buck, Guthrie, received 8 votes.

Very respectfully submitted,
W. P. Smalley,
Secretary-Treasurer.

BUFF LEGHORN CLUB CATALOGUE.

This club has just issued a neat, well printed and illustrated 90-page catalogue, telling all about their favorite breed, and nothing but the good and bad points about the Buff Leghorn can be found in this book. It is worth \$1 to any person who is just beginning in the poultry business, but will be mailed free to any person addressing Geo. S. Barnes, secretary, Battle Creek, Mich. If you are looking for some good fowl to add to your yards, the studying of this catalogue will help you wonderfully. Buff Leghorns hatched in July will lay in December, and win prizes. What more is wanted of a breed of chickens?

FOR PRESIDENT OF THE RHODE ISLAND RED CLUB OF AMERICA.

Irving A. Silby, South Bend, Ind., the well known breeder of Rhode Island Reds, informs us that he has decided to accept the nomination for president of the Rhode Island Red Club of America. We do not believe that the members of this club can do better than support Mr. Silby for this position, as he is a man who is capable of performing the duties of this office in a manner that would be to the best interests of the club and all its members.

NATIONAL COLUMBIAN WYANDOTTE CLUB.

The annual meeting of the National Columbian Wyandotte Club was held January 13, in room 14, Mechanics Building, Boston. In the absence of the president, the meeting was called to order by Vice-President Campbell, secretary of the American Poultry Association. The members present were enthusiastic over the fact that Columbian Wyandottes were the largest class in the show. The year has been a good one for the club, both as to

increase of membership and financially, about eighty new members having joined during the year, and a balance of \$122 is in the treasury. The club has issued a catalogue of 48 pages during the year and is to issue another for 1910. The officers elected for 1910 are: President, Horace Porter, Ridgefield, Conn.; vice-president, Walter G. Fenton, Mt. Clemens, Mich.; secretary-treasurer, Geo. F. Eastman, Granby, Mass. Executive Committee—The president and secretary, S. T. Campbell, Mansfield, Ohio; T. H. Scott, St. Thomas, Ont., Can.; Charles D. Cleveland, West Orange, N. J.; T. Reid Parrish, Nashville, Tenn.; Milan A. Brayton, Fall River, Mass. With a set of officers who are enthusiastic Columbian Wyandotte breeders; with the fact that at three of the largest New England shows—Boston, Mass.; Providence, R. I., and Portland, Maine—the Columbian Wyandottes were the largest class in the show, is it any wonder that the club looks

toward the future with renewed confidence?

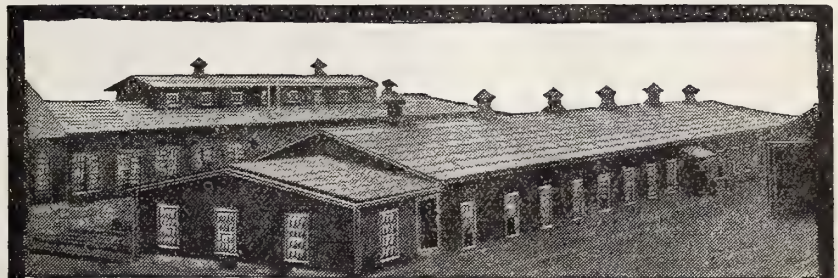

A donation to the club of a \$25 silver cup from Mr. H. W. Buckland, Lower Wick, Worcester, England, to be given at the show where the annual meeting is held, to the best shaped Columbian Wyandotte, was acknowledged and the donor thanked.

Notice of the death of former Secretary E. E. McIntosh, last July, was brought before the club, and resolutions of sympathy for his family adopted.

George F. Eastman, Secretary.

A CORRECTION.

In our May issue we made the announcement that the yearbook of the American Single Comb Buff Leghorn was ready for mailing, and to address E. W. Staebler, West Park, Ohio, for a copy. This should have been the Single Comb Brown Leghorn.

Amatite Roofing

NEEDS NO PAINT

EVERYTHING nowadays is constructed with the view to save time; to save labor; to save money.

These are the primal points which have made Amatite successful. That these things have been achieved such letters as the one below fully prove.

"Oakland, Me., Feb. 2, 1910.

Barrett Mfg. Co.

During the past twelve years we have used several different brands of Ready Roofing; some of these have cost much more than Amatite, but we are free to say that we prefer the latter. Not only does it give fully as good service, but it requires no painting or coating, as some of the others do. We consider this a most desirable feature.

Yours truly,

DUNN EDGE TOOL CO.

By R. W. DUNN, Treas.

These letters come to us constantly.

Amatite doesn't leak, and **never needs to be painted.** Its cost is low; its service long. It saves time, labor and expense.

Its **real mineral surface** and coal tar pitch waterproofing are responsible for this. We know what Amatite will do. We want you to know. Therefore we offer you a sample free.

Just send your name on a postal to nearest office.

BARRETT MANUFACTURING CO.

POULTRY PUBLICITY

Louis A. Schmier

[Any of the poultry breeders contemplating to get out a new catalog and desiring further information about the cost of cover-design plates and poultry illustrations are invited to correspond with us. We can handle all kinds of art and engraving work and at prices that are reasonable considering the high quality of goods which we deliver.—Editor's Note.]

The Poultry Fancier's Advertising Literature.

Circulars, mating lists, special sale lists, and catalogues galore have reached our desk during the last two months.

Some of them were printed on paper that would do well for wrapping of parcels, etc., some that were printed on good quality of paper but spoiled by poor presswork, others again that had good paper and excellent presswork.

Catalogues, circulars, etc., are really the poultry fanciers' salesmen, and for that reason should be gotten up with this one object in view. The foremost requisite of a good catalogue is the making of a favorable impression on the prospective customer. This first impression does the business in many cases and brings the order home. A well printed and illustrated catalogue seldom wanders to the waste basket, and is generally kept for future reference. A poorly gotten-up catalogue or circular, containing poor illustrations or none, generally goes into the waste basket the minute it is received.

Look at the handsome catalogues some of the live stock breeders are sending out, or the piano manufacturers or automobile concerns. They would stand a "fat" chance of landing orders in these days of competition if they issued advertising literature that did not make friends with the readers' eyes. Why not, then, apply the same system and rule these people use to the poultry business? There is more competition in the fancy poultry trade than there is in the automobile or piano business. We have a hundred competitors to their one. This means that some of the fanciers will have to get a "hump" on themselves and back up their inquiries which they receive from their advertisements with better literature, or they will lose trade to the man who knows how to advertise best.

Many of the progressive fanciers have recognized the additional selling value a handsome cover design gives to a catalogue and their catalogues, besides containing good arguments in favor of their stock, are also well illustrated! We will mention a few of them, which, in our mind, should bring orders home.

J. C. Fishel & Son's 1910 catalogue is a dandy; nicely printed, beautifully illustrated and contains, as usual, many original ideas in breeding and perfecting White Wyandottes, for which they are noted. A fine embossed two-color cover design adorns the outside. Send 10 cents to Box J, Hope, Ind., and you will get it.

Carl Byers, Hazelrigg, Ind., has issued the finest Orpington catalogue we have seen this season. It is printed on the best quality of paper, nicely illustrated and a neat, tasty cover design, printed on green rough cover stock, gives

the book a handsome appearance. It is chock full of information that will interest the Orpington breeder.

Lyman H. Hill, the well known White Rock breeder of Station 1, Jackson, Mich., has issued a dandy catalogue. He

knows the advertising business from A to Z and his catalogue shows the practical application. The book is excellently printed, well written and adorned with a unique cover. The illustrations are

printed in black and the type matter in light brown, giving a very pleasing appearance. He sends the book for 4 cents in stamps to cover postage.

Monmouth Poultry Farms' (Freneau, N. J.) catalogue, describing their Buff

Leghorns, is nicely illustrated, well printed and clothed in a rough stock cover. The book gives a list of the prizes won and also a mating list for the season.

Sunswick Poultry Farm, South Plainfield, N. J., have issued a catalogue that compares with the best. It is printed on the best quality of enamel paper and a bright red rough stock paper cover embellishes the outside. A cut-out in the center shows the head of one of their birds. The book contains a complete prize record of their birds and shows many illustrations, and is a credit to the printers' art.

Glen H. Burgott, Eden, Erie Co., N. Y., has issued a neat little catalogue describing his Buff Wyandottes.

F. A. Tecktonius' catalogue and book of information is in such a great demand that he will soon issue the second edition. This catalogue is one of the best written ones that has come to our notice. It contains arguments in favor of Buff Leghorns that are convincing and to the point. Handsomely illustrated from end to end, adorned with a three-colored cover showing a Buff Leghorn head in natural colors, it ranks up with the best. It contains also a colored insert of a pair of his birds, made direct from a photograph, and not from a "made to order" painting.

This is quite a departure from the old-fashioned way, and shows the birds just as they are. The book contains so much information that it is well worth the price of 25 cents which he asks for it. Address your letter to Route 7, Racine, Wis.

Many other fine catalogues have reached our desk, besides those mentioned. Some of the mating lists and circulars that deserve mention on account of the fine printing were sent us by the following breeders:

Grove Hill Farms, Waltham, Mass.
American Buff Leghorn Club.
International Ancona Club.
Dr. J. N. MacRae, Galt, Ontario.
H. W. Halbach, Waterford, Wis.
George Kline, Downers Grove, Ill.
Walter Fenton, Mt. Clemens, Mich.
W. H. Wiebke, Fort Wayne, Ind.
Chas. W. Switzer, South Euclid, Ohio.

Thousands of birds have already been hatched and soon the show season will be with us again and fanciers will be getting out new catalogues. As the demand for specially designed catalogue covers, letterhead designs and poultry illustrations has been unusually heavy, we respectfully ask our patrons to get their orders in to our art and engraving department as early as possible, as it takes some time to get the work out.—Editor's note.

We lead, others follow.

BYERS ORIGINAL
PEARL WHITE STRAIN

A. O. Schilling

FIRST PRIZE PEN S. C. WHITE ORPINGTONS AT CHICAGO DEC. 1909
C. S. BYERS HAZELRIGG IND.

The Orpington display at the Mid-West Show, Chicago, December, 1909, was one of the features of that exhibition. Artist Schilling shows in the above illustration the excellent Orpington type and characteristics of the specimens in the winning pen owned by C. S. Byers, of Hazelrigg, Ind. Mr. Byers was one of the first to recognize the sterling qualities of this now popular breed and has been very successful in producing excellent specimens of all three varieties, the Whites, the Buffs and the Blacks.—Reliable Poultry Journal, March, 1910.

Battleview Farm Reds

Eggs for hatching that hatch good pure blooded, healthy, vigorous chicks, Write for catalogue. It's free. Battleview Farm, C. R. Applegate, Prop., Freehold, N. J.

Dark Cornish and White Indian Games

Young and mature breeding stock. Prices right. Let me know your wants. Eggs in season. Mention A. P. J. JOHN A. MILLER, NAZARETH, PENNA.

SILVER LACED WYANDOTTES

At Chicago we won 1st cock, 3d cockerel, 5th pullet in strongest competition. A few extra fine birds at reasonable prices. Write for egg circular. CLARE E. HOFFMAN, Allegan, Michigan.

S. C. Brown Leghorns

Madison Square winners, 1909-10. Eggs for \$3 and \$5 per fifteen.

Kittatiny Poultry Yards, C. L. Puder, Prop., Irvington, N. J.

140-EGG INCUBATOR, \$7.55!!

Best ever made. Double walls, copper tank, self regulator, thermometer, egg tester, etc. All complete. Brooder \$4.50. Both \$11.50, freight prepaid. Book free.

Belle City Incubator Co., Box 27, Racine, Wis.

BEST BIRDS, BEST EGGS, LOWEST PRICES

All leading varieties pure-bred chickens, ducks, geese and turkeys. Largest poultry farm in the world. Fowls, eggs and incubators at lowest prices. Send for big book "Poultry for Profit." Tells how to raise poultry and run incubators successfully. Send 10 cents for postage. J. W. Miller Co., Box 56, Freeport, I.I.

REDS

THAT ARE RED :: RICKSECKER'S PERFECTION REDS

Hot, Filthy Water

Will Kill
Your Chicks

By using Weldon's Poultry Fountain you will keep the drinking water cool, sweet and clean. The chicks will not drink so much, because the sun cannot heat it up and it cannot become filthy.

You Will Raise One-
Third More Chicks

Remember, it's not what you hatch but what you raise that counts, and one chick lost that would have been a prize winner would pay for a dozen fountains. Send for our free book giving full information.

Andrews Wire & Iron Works

Sub. Station C Rockford, Illinois

THE CACKLES OF THE RED HEN.

The red hen of today
Is the one that's here to stay,
For she always pays her way
And something for a rainy day.

In the shape of eggs that are brown
And are somewhat long and round,
Which in plenty are always found
Where the "Red Hens" are around.

She's as pretty as a maid
In her dress that's red in shade.
And the male is king indeed—
This all are willing to concede

Who have given Reds a test
Are the ones who love them best.
And the verdict of one and all
Is the Red Hen beats them all.

By C. W. Zimmer.

FROGS IS POULTRY.

The frog who would a-wooling go,
Should hop in at the poultry show;
By custom's latest fowl decree,
It is proclaimed forsooth that he,
Is "poultry," thereby the right to pick
For running mate a duck or chick.

The "poultry" part of frogs is "legs."
The heads don't count, nor yet the eggs;
The skin is likewise cast aside,
And feathers are not here implied,
Though later on at poultry shows
We may see feathered frogs, who knows?
Charles L. Tompkins.

We desire to call your attention to the Mineola Strain of Buff Wyandottes. Eggs from this strain are now reduced to \$3 per

BUFF WYANDOTTE PULLET.

First prize Youngstown, Ohio, 1910. Score 95 3/4. Bred and owned by Fred A. Poertner, Berea, Ohio.

15, evenly divided between Mineola, Richmond Hill and New York winners. There is full value in every egg. Mr. Howell reports a number of customers who hatched 13 and 14 out of 15 eggs. You can do no better than to start a flock of these paying Buff business birds. Look up their winnings for the past year and place your order with L. D. Howell, Mineola, N. Y. See his ad in this issue and be sure to mention this paper when you write.

Tom H. Woods, Fayette, Mo., who makes a specialty of breeding S. C. Brown Leghorns, reports that he has 500 young chicks that are going to be ready for the fall and winter shows. He has also decided to dispose of some of his this year's breeders at reduced prices. Now is the time to buy if you want the best at bargain prices. Write him and mention American Poultry Journal.

Evergreen Poultry Farm, Mrs. E. E. Girard, proprietor, Schleswig, Iowa, has a display ad in this issue. Barred Plymouth Rocks has been a specialty on this farm for the past twenty years, and their show record is one to be proud of. You cannot do better than write for prices and mention American Poultry Journal.

Oak Nest Farm, Chas. Shields, proprietor, Hookstown, Pa., have issued a very neat catalog telling all about their Rose and Single Comb Rhode Island Reds. Send for a copy and get acquainted. Mention American Poultry Journal.

POULTRY KEEPERS SPECIALTIES

Direct from Factory to You

The illustration herewith shows a Poultry Scalding Thermometer.

There is just one manufacturer of Incubators and Brooders that makes its own Thermometers, Hygrometers, etc., in addition to their full line of Poultry Supplies. That enterprising firm is the MODEL INCUBATOR COMPANY (Robert H. Essex, President), BUFFALO, N. Y.

The great advantage is that the Company is in a position to guarantee satisfaction in every article sent out by them. They undertake to return your money if every article is not as represented, and they can afford to do it because they MAKE THE GOODS THEY KNOW THEY ARE GOOD. THEREFORE THEY GUARANTEE them.

In buying from the Model Company you have the advantage of dealing with a firm whose departments are all in charge of experienced poultrymen—men who have used poultry supplies themselves and know what they should be.

Take the Model laboratory, for example, with all its specialties. Mr. Sullivan, the chief chemist, has had years of training and experience in selecting drugs and compounding laboratory products intended for poultry—poultry medicines, lice killers, disinfectants, etc., etc.; and in no department is the knowledge of poultry needs more necessary than in the laboratory.

It is just the same in the Model factory. Its superintendent, Mr. Thomas, has a habit of always wanting to try it out himself in his own poultry yard before sending it out to customers. Therefore, every article of wood or galvanized iron or other material must be "just so" before it leaves the Model factory.

It would be a good plan to write for their Catalogue, which will be sent you free if you mention this paper.

If it is Poultry Supplies you need, ask for their Poultry Supply Catalogue. See list of goods in advertisement on page . Write for their Catalogue. It costs you nothing and the information may be the means of saving the lives of many of your chicks—and old fowls, too. Address MODEL INCUBATOR COMPANY, Buffalo, N. Y.

Model Head Lice Ointment

A VISIT TO THE HOME OF THE
"RINGLETS."

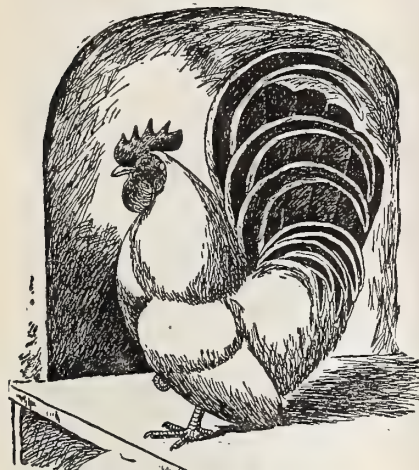

During our recent visit in the East the writer had the pleasure of seeing E. B. Thompson's fine poultry farm. Mr. Thompson is so well known to the fanciers at large, through his great winnings at Madison Square garden, with his "Ringlet" Barred Rocks, that it is unnecessary to describe him any further.

Mr. Thompson is one of the most successful breeders in America, his record at New York shows during the past twenty years is unequalled. When a man has shown the ability to produce fine exhibition birds year by year and decade after decade, his name and birds become particularly distinguished, and the way he has attained prominence may with the greatest advantage be followed by others who want to succeed with Barred Rocks.

His wonderful place has been so often described in the poultry press that nearly every fancier is familiar with it, and the writer found the place just as presented, only with additional improvements.

Mr. Thompson certainly has a beautiful home, as well as surroundings, and we doubt if, everything considered, it has an equal. Every building, from the home and office to the coops and colony houses out on the range, are in perfect accord one with the other.

While we were there Mr. Thompson was just setting out the stakes for a handsome new porch to be added to his already splendid home. When completed this will be a fine place to while away the hot sum-

Black Tail Japanese Bantam cock, score 95%. Bred, owned and in breeding yard of A. A. Fenn Co., Delavan, Wis., Box 37.

mer evenings and view the beautiful scenery.

Mr. Thompson had sixty-two pens mated up for the egg trade and reported such a demand for them that he was weeks behind in filling orders. The writer watched Mr. Thompson select the eggs to be shipped that day and noted the care he exercised in selecting eggs of even size, and he further tested the shells of every egg for thickness and an egg that would not pass the test was cracked and put aside to be used as feed for the little chicks, etc. This job of overseeing the selection and shipping eggs Mr. Thompson looks after himself and the best testimonials that he has are that his old customers are coming back year after year for more. He has shipped eggs to all corners of the country and also abroad, and they invariably arrive in good condition.

The reader, and in particular those breeders who have visited here, can well imagine the difficult job ahead of me in describing the birds to be seen here. The "Ringlets" have characteristics of their own. Their quality, as seen here under the personal supervision of Mr. Thompson, can be fully appreciated, but to write and describe them for others to see through these lines is no sinecure.

The standard quality of his stock is so uniform that to describe every good bird on the place would take a larger book than the American Poultry Journal and we advise our readers to send for one of his handsome catalogs, which gives a complete prize record and also contains pages of testimonials in praise of the "Ringlet" Barred Rocks from satisfied customers. Address being Lock Box 510, Amonia, N. Y., will bring it. L. A. Stahmer.

"ENTERPRISE" MEAT AND CHOPPER FOOD

The most useful of kitchen helps—an invaluable aid in sausage making. It actually cuts anything that goes through it—meat, fish, vegetables, fruit, etc. Strong and simple. Made in 45 sizes for hand, steam, and electric power. No. 5, small family size, \$1.75, No. 10, large family size, \$2.50.

Also makers of "ENTERPRISE" Bone, Shell and Corn Mills, Sausage Stuffers and Lard Presses, Coffee Mills, Raisin Seeders, Fruit, Wine and Jelly Presses, Cherry Stoners, Cold Handle Sad Irons, etc.

The "ENTERPRISING HOUSEKEEPER" contains over 200 recipes. Sent anywhere for 4 cents in stamps.

A Great Record

No incubators or brooders on the market can show such a record as that achieved by The Prairie State machines. Their popularity which has made them the choice of both beginner and expert to the extent that they are considered the highest type—most practical and successful of all others is the result of actual superiority of material, construction, hatching and rearing principles.

Prairie State Incubators and Brooders

have always embodied the very best known
by the best skilled construction and high-grade material.

principles of artificial incubation, supplemented in actual use. The Sand Tray feature alone is sufficient reason for preferring a Prairie State to any other incubator. The Universal Hover is years ahead of ordinary brooding devices. When such experts as Edward Corning, of Bound Brook, N. J. endorse and use them exclusively they must be the best. He writes:

"After trying your Universal Hovers we have discarded all others, and intend to use them exclusively, as they give perfect satisfaction."

Let us send you our 1910 catalogue—it will deeply interest you. Write for a copy to-day.

NEWTOWN PRODUCING CO., BREEDERS OF S. C. WHITE LEGHORNS, NEWTOWN, PA.

In a recent article in Poultry Item, Mr. F. W. De Lancy has the following to say concerning the Newtown Producing Co., of which Mr. H. L. Watson is manager:

The Newtown plant is located on the

and maintain the inner privacy, there is a railing, and then beyond, the manager's desk, a typewriter desk for the stenographer, a bookkeeper's stand, a heavy safe. To the left was what may perhaps be called the director's room. In there upon the large center table lay fourteen or fifteen prize ribbons that the Newtown Leghorns had won the week before at Philadelphia—three firsts, two or three second,

bred Leghorn was a fowl too petite to have the robustness necessary for the production of many eggs and large eggs. I was shown egg records that I do not question, made by White Leghorn females, full sisters of the first prize Philadelphia pullet, permit me to no longer stand with the many strictly-utility breeders and urge the breeding of heavier, longer bodied Leghorns. I must accept the present winning White Leghorns as of a type not detrimental to egg production.

The first breeding pen I saw on the Newtown Farm was a pen of twelve hens. They had been on display all the previous week at Philadelphia and had just arrived home the day before, yet from those twelve hens there were seven eggs in the nests. With these females was the first prize cockerel at the show. He is a bird of good comb and wattles; red eye, lobe a little smaller than a quarter of a dollar in size, well finished in tail, with two flowing sickles and three pronounced lesser sickles. In this house are twenty-four pens of bird that comprise what Mr. Watson terms superior exhibition, egg-laying matings.

Leaving the range we walked to the "big" laying house. It is 200 feet long and 50 feet wide. There are five pens, each approximately 40x50 feet. From 500 to 600 birds were in each pen.

Perhaps the first questions to be asked are: "How did the birds look; what was the egg yield?" The style of the house is without precedent and the evidence of its practicability is the well being and productiveness of the fowls it shelters. A comparative statement is most conclusive so, the layers in the big house had brighter combs and were in better feather than those in smaller flocks, in the smaller pens of the other houses, while the egg yield of the birds in the big house was from 35 to 40 per cent and that in the other houses was about 33 per cent.

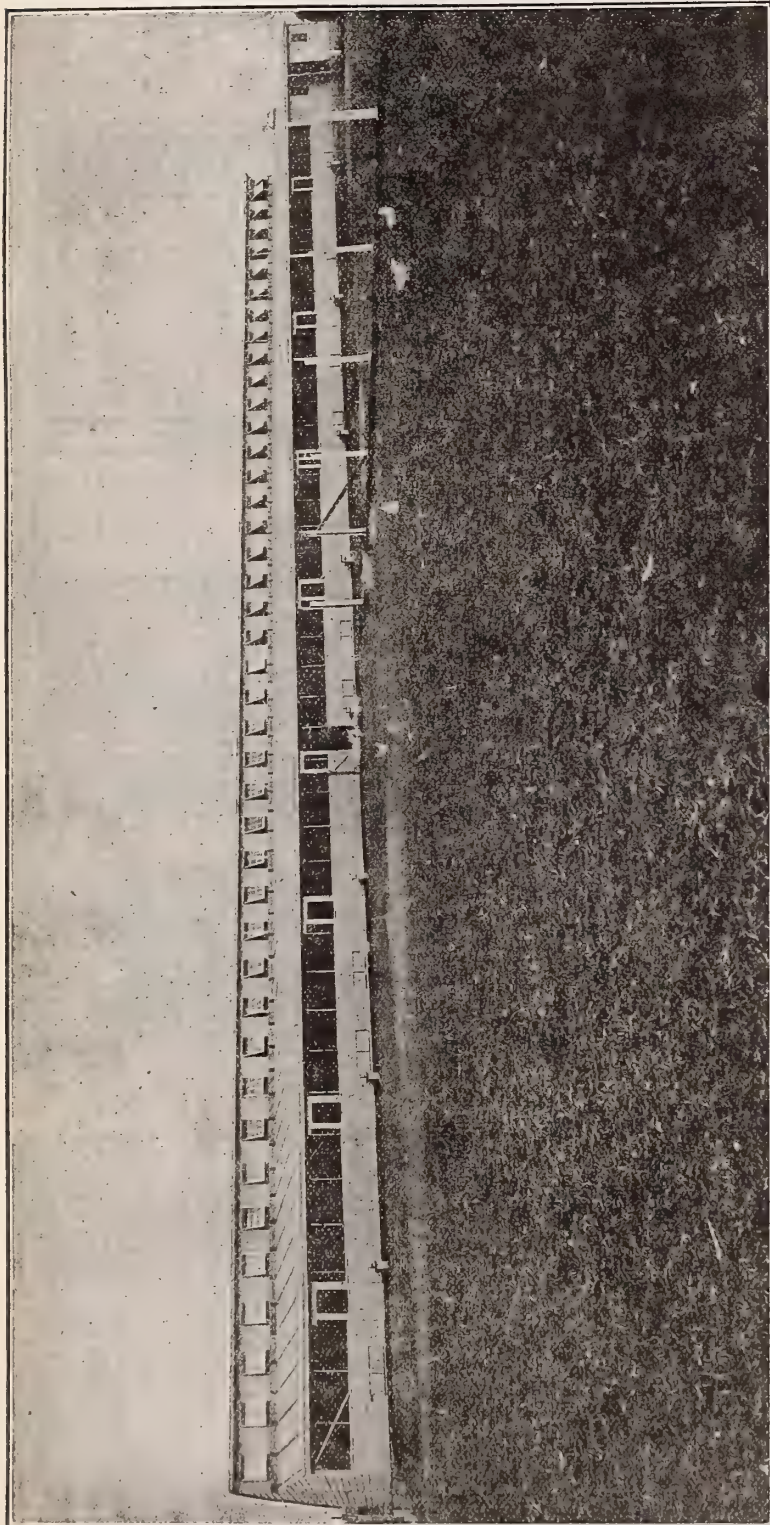

The floor in this house was very dry, in fact, the sand was dusty, for it was an earth floor. The walls are concrete, 3 feet high; 1 foot in the ground and 2 feet above, and then banked up outside, protecting the base of the wall from the frost; 10 inches of cinders were put in as a foundation for the floor, on these was put 6 inches of clay, then 6 inches of sand. The cinders prevent moisture rising; the clay prevents the sand filling down; and on the sand the litter lies. The day I was in the house the sand was dusty, while it was muddy outside with the frost "coming out of the ground." As the sand does not become damp it does not freeze in cold weather.

And the floor does not become damp; it cannot. While there is no moisture arising from the underground, what moisture there is in the droppings of the fowls or exhaled from their throats and lungs, does not condense and cause dampness, but is carried off or evaporated by the fresh air that is continually in the house—for the house is an open front house.

In the days when poultry culture was new dampness was common to all hen houses. This suggested artificial heat to evaporate the moisture. The principal was then expanded and it was written that fowls are most productive in the spring time when the weather is mild. Artificial heat was used to obtain the spring time temperature and egg yield throughout the winter. The radiated heat evaporated the moisture common to the laying houses and maintained the temperature, but by the warmth the anticipated egg production was never obtained. The fresh air house, be it "open front" or "curtain front," is the house that is in use and being built on the big, practical farms throughout the eastern states.

The yards to the big house at Newtown contain three to four acres. There are two house pens to the first yard and three to the second. These yards will be fenced across and green food planted so that the birds will have good forage in each park, as they are let further on in the yards. Some of the birds that were on exhibition at the Philadelphia show are in this house, also some of last year's winners at Scranton, Allentown and Reading. Eggs from these birds will be sold at \$8 per hundred. From a fancier's viewpoint the birds were good Leghorns. The further in the house I walked the better they looked. The pullets, as a whole, were the best developed I had seen. Mr. Watson is selecting for health, knowing that constitutional vitality is a fundamental inside value of never passing import.

Leaving the big laying house, we walked over to the brooder house. Here, as before referred to, two Hall brooder systems are installed. Writing of these systems in his booklet, Mr. Watson says: "This is the most economical and best chick-raising system on the market. There is no possibility

This house is 200 feet long, 50 feet deep, divided into five pens, with 600 birds in each pen. Located on the farm of the Newtown Producing Co., Newtown, Pa. It is a curtain front type and has proved a most successful house during the past winter, which is the severest we have had for twenty years. These buildings have been the subject of a great deal of comment, but after going through an entire year with them have proved that they are decidedly the most economical and profitable type of house to use for Leghorns.

edge of Newtown. The railroad track is all that separates it from the town, and the railroad station is the terminus of the drive that leads to the plant and the street that goes down town. Mr. H. L. Watson, manager of the plant, met me at the depot and together we walked the little way to his office on the farm. This office is the fitting headquarters of the poultry establishment. Inside, to hold off the intruder

three third, two fourth, two fifth and two special ribbons. In addition, Newtown won two silver cups, one for the best Leghorn of any of the Leghorn varieties, the other for the best display of Leghorns.

It may be said that showroom fowl can have no relative value in a utility flock. A month ago I would have maintained so if the race in question had been the Leghorn. I would have told you that the standard

of chicks crowding, and there are no lamps and poisonous gases; fires and suffocations are unknown in the house. Chicks can be raised as successfully in this house in January as in June. The remarkable growth of our young stock last season we attribute largely to our improved systems of incubating and brooding."

At one end of the brooder house is a two-story extension of which the upper floor is used as a conditioning room for show birds. The room is fitted with exhibition cages and is lighted with electricity. There is a sink and hot and cold water. There are five pens with one-quarter inch mesh wire bottoms. Two inches beneath the bottoms are six hot water pipes. Then there is an electric fan to circulate air. I remember watching that past master of the fancy, "Billy" McNeil, wash some Polish fowls for the "Ontario Provincial." Over his stove he had a wire bottomed exhibition coop setting on four bricks. It is different at Newtown; each thing is planned that it may be a little better than it was elsewhere before.

In conclusion I want to mention the hatching facilities at Newtown. The incubator is a "Hall Mammoth," holding 10,200 eggs. Last year it was a 6,000 eggs machine, but 28 feet have been built to it, increasing its capacity 4,200 eggs. On reference to the machine Mr. Watson says: "During the past season we have hatched a larger percentage of eggs incubated, the chicks have been stronger when taken from the machine, they have grown faster and have greater vitality than any other chicks we have ever raised."

So large and efficient incubating capacity enables Newtown to handle large orders for quality baby chicks.

NEW PATENTS ISSUED.

Among recent patents issued at the United States patent office we find one granted to the Norwich Automatic Feeder Co. for an automatic exerciser and feeder, which comes nearer being perfect than any we have seen at all the poultry shows this past winter. This feeder is designed for use on the poultry plant, whether run on a large or small scale. It is very simple in construction and is the most practical device of the kind on the market.

The feeder consists of a galvanized iron hopper, in the bottom of which is fitted an adjustable valve, which controls the flow of grain as it falls on the spreader, directly below the hopper. By this means the feed is scattered over a large amount of floor or ground space. The chickens operate the feeder by pecking at the bait bar, resembling an ear of corn, which is filled with either corn or wheat. This bar is suspended from the hopper by an adjustable rod and operates a small disk which causes the grain to fall upon the spreader and thence to the ground. The feeder stands on three iron legs, making it possible to use them on hilly ground.

The feeder is absolutely rat, sparrow and weatherproof, and plants already equipped with them report that the sparrows and rats have entirely left their yards, as there

is no feed for them in sight, resulting in an immense saving of high priced grain.

The River Home Poultry Yards, of Perysburg and Toledo, Ohio, are the distributors for these feeders in the central West and will supply any further information desired. Look up their ad, which appears regularly in this paper, and write for their interesting little booklet, which is free for the asking.

R. J. Knisley, proprietor of the Pine Rose Poultry Yards, York, Pa., exhibited a fine lot of birds at the recent Baltimore

winnings, together with Mr. Knisley's winnings at many other shows, where he won specials and silver cups, proves that he has the quality. His pens are mated so you will get some great winners from them. If you are looking for Black, Buff or White Orpingtons, write Mr. Knisley. Mention American Poultry Journal.

W. E. Stanfield, proprietor Brookdale Farm, Hillsdale, Mich., writes that they have not been able to accept much over one-half the orders that have come in for eggs, and from now on no eggs will be for

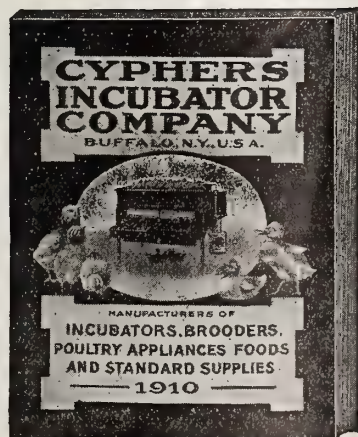

QUEEN BESS.

First hen at Polo, Ill., January, 1910. One of the long line of Barred Rock winners bred and shown by Wm. H. Hoover, Lock Box 339, Polo, Ill., the past season.

show. In a hot class of S. C. Buff Orpingtons he won 4th and 5th cocks, 3d and 4th hens, 2d, 4th and 5th pullet, and 1st and 3d cockerels on S. C. Blacks. He won 1st pen and 3d cockerel on two entries. Special for best pen of Blacks in show. These

sale, as the house capacity has been increased to an extent which assures room enough to care for some June hatched stock. So the incubators will take every egg from Brookdale's White Orpingtons for balance of the season.

EVERYTHING FOR POULTRY KEEPERS

WE MANUFACTURE SEVENTY-TWO DIFFERENT ARTICLES for up-to-date, progressive poultrymen and women, ranging from Cyphers Mammoth Compartment Incubators holding 50,000 eggs at one filling down to 10-cent trial packages of Lice Powder, and every article is warranted to be as represented and is guaranteed to give satisfaction or money refunded. Standard goods we manufacture and sell include the following:

Incubators	Developing Food	Lice Powder	Roofing Paper
Brooders	Chick Food	Lice Paint	Spray Pumps
Brood Coops	Forcing Food	Napcreol (Disinfectant)	Powder Guns
Chick Shelters	Laying Food	Anti-Fly Pest	Wire Fencing
Brooder Stoves	Short-Cut Alfalfa	Egg Preservative	Bone Cutters
Leg Bands	Shredded Alfalfa	Fumigating Candles	Chick Markers
Egg Packages	Mealed Alfalfa	Drinking Fountains	Bone Mills
Egg Testers	Full-Nest Egg Food	Grit and Shell Boxes	Root Cutters
Caponizing Sets	Nodi Charcoal	Food and Water Holders	Nest Eggs
Scratching Food	Poultry Remedies	Roost Supports	Poultry Books

OUR COMPLETE CATALOGUE FOR 1910 Consists of 160 pages, 7½ x 10 inches, and contains an illustrated description of all goods we manufacture. Tells about freight rates, gives prices, etc. Contains five instructive chapters on successful incubating, brooding, feeding, heavy egg yields, etc. Illustrates and describes our \$40,000 poultry farm—the largest in the world owned and conducted by an Incubator, Brooder and Poultry Supply Company.

THIS BIG CATALOGUE and Poultryman's Guide is **FREE** postpaid to any address if you will kindly mention that you saw our advertisement in this paper. Note below our six places of business in the United States which insure low freight rates and prompt delivery of goods. Address Home Offices or Branch Store nearest you.

ORIGINATORS OF ALL THE ORPINGTONS.

William Cook & Sons, Scotch Plains,
N. J., As Our Artist, Mr. Stahmer,
Saw Them.

Two miles from the beautiful village of Westfield, N. J., are located Wm. Cook & Sons poultry yards, the well-known originators of all the Orpingtons. They call the town Scotch Plains ("Cookstown" would be better, as nearly everything belongs to them anyway). The name of Scotch Plains is certainly a misnomer. Not a sign of plains around there; instead of that the country is very hilly and the tail end of the Blue Hill mountains form the border line to the Cook's mammoth plant. We were met at the depot by Percy A. Cook, and after a delightful automobile ride that exceeded the speed limit several notches landed at Scotch Plains. This being his country's home we naturally expected to see some good birds and as all the Orpingtons were originated by the Cooks we would have a chance to see them as they should be. After visiting every yard on the place and viewing some thousands of birds we can render only one verdict, and that is that they have "the best Orpingtons" we ever saw, and we have seen a number of them in our time and know good ones when we see them.

The great record of over 12,000 first prizes won in this country at such shows as Madison Square garden, etc., and at Crystal Palace, England, is further proof that they have the best and stamp their birds as leaders beyond a doubt. They issue a very handsome catalog which not only contains a history of the breed, it also contains valuable information as to the care of the breed. A letter to Box A, Scotch Plains, N. J., will bring it.

CONNER'S AUTOMATIC FEEDER AND EXERCISER—W. M. CONNER, JERSEY CITY, N. J.

That an automatic feeder is a good thing is now an admitted fact, and Mr. Conner makes a successful automatic feeder in three sizes. One for small chicks, one for half grown stock and one for adult fowls.

The advantages of using an automatic feeder are many. You don't have to worry about your chicks or old birds being fed at the proper time, the feed is always there where they can get it. Besides it is up in the dry, where the stock can't foul it and then eat it and get sick, no rats or mice or sparrows can eat it up, which is a big saving and helps keep your place free from these pests.

The chickens get the clean grain just when they want it and just as much as they want. If your work takes you away from your poultry during the day your wife don't have to stay home and feed the chicks or chickens. Where chicks require several feeds a day this is quite a task. With Conner's automatic feeder all this worry and trouble is taken off your mind. Your wife can go visiting or do as she pleases. You can go to the office free from any worry about the birds not being fed, and if you are visiting a friend and it comes feeding time and you wish to stay longer you can do so, the stock feeds itself. That's pretty fine, don't you think? Well send to Mr. W. M. Conner, Jersey City, N. J., today for literature. See ad in this issue. Mention American Poultry Journal.

While the evenings are long this winter I want to make up several pretty, simple dresses for afternoon wear next summer. Please suggest a suitable material. It ought to be very moderately priced. I don't know of anything stylish and pretty at the price I can pay.

Country School Teacher.

No matter how much money you might be able to pay, you could find no prettier or more stylish material for summer afternoon dresses than Simpson-Eddystone Zephyrette Gingham. They are exquisite in coloring, with beautiful designs, and so light weight, soft and fine that you will be amazed at their very moderate price. You can secure any wanted color and a large variety of designs.

Philip Koehlinger, 1414 E. Grant ave., Ft. Wayne, Ind., writes he will sell three males and thirty yearling hens at a bargain to make room for the young stock. He says he has about 300 chicks growing now. Anyone interested should write him and mention American Poultry Journal.

Should Hide Their Heads

Unscrupulous agents pretend that complicated cream separators can be washed by "sousing" 40 to 60 disks as one piece. The "New York Produce Review," of April 13th, contains statements from prominent creamery men who condemn "sousing." The following extracts from these statements should make unscrupulous agents hide their heads:

"Wash machines every time they are used and not use the 'sousing' method advised by agents of complicated machines—this method being very injurious to cream."—DAVID W. HODGES, New York.

"I have seen cheap separators it was an impossibility to clean. The greatest trouble is caused by misrepresentation, regarding work necessary to keep machine clean, by agents whose sole purpose is a sale."—GLEN OVERTON, Michigan.

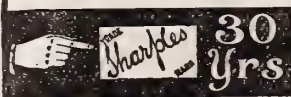

"A dirty and unsanitary farm separator is the start of bacteria it is hard to overcome."—J. M. TAFF, Iowa.

"It has been demonstrated by tests that it does not pay to have the separator partly clogged with filth."—L. C. SHEPARD, Ohio.

These statements should decide you to get the only simple, sanitary, easy-to-clean cream separator—the

SHARPLES DAIRY TUBULAR

The World's Best. World's biggest separator factory. Branch factories in Canada and Germany. Sales exceed most, if not all, others combined. Probably replace more common separators than any one maker of such machines sells. Write for Catalog 2.5

A VISIT TO SUNSWICK POULTRY FARM, SO. PLAINFIELD, N. J.

Sunswick Poultry Farm is located at South Plainfield, N. J., about twenty-six miles from New York. The situation of the farm (which consists of fourteen acres) is ideal. The ground is high and dry, and is within easy driving distance of three railroad stations.

The Sunswick Poultry Farm has for four years been devoted to raising nothing but the S. C. Buff, Black and White Orpingtons, and the quality of their birds may be judged by their winnings at Madison Square, New York; Boston, Mass.; Cleveland, Ohio; Hagerstown, Md.; Allentown, Pa.; Baltimore, Md., and Trenton, N. J.

We have visited quite a few poultry farms but we have yet to see a place better equipped than this. The buildings and yards are arranged beautifully and are a credit to the owner, Mr. Delafield. It is no wonder then that we found the chickens in such fine condition as they were. They have paid particular attention to Orpington type and their birds carry this type very uniformly throughout the different colors of this variety which they breed. They reported a great egg business and also a great demand for stock. About 1,000 youngsters were hatched at the time of our visit and they expected to raise about 3,000 of the different varieties. Mr. Delafield has imported this season some blue and buff Orpington ducks, and makes great claims for them. They certainly looked good to us and they will meet with success as soon as the public gets familiar with them. They are of good size and excellent layers, maturing very early, and have fine flavored meat. No eggs for hatching from these ducks will be sold until next season.

They issue a very handsome catalog, giving a complete prize record. It also shows pictures of a number of their prize winners and is well worth sending for.

L. A. Stahmer.

THERE IS NO EXERCISE TO EQUAL CYCLING.

Among all the sports or forms of exercise, which have found any degree of favor with Americans, cycling is most ideally suited to American needs and American temperament.

It satisfies our passion for being "on the go" in a sane, health-building manner. There is no nervous tension to cycling, such as attends the swift ride on the speeding motorcycle, or in the whizzing auto.

Gliding along on a light running wheel one forgets he has nerves or muscles. Instead of a rush of air in the face that renders breathing a difficult task, it seems second nature, when wheeling, to drink in long sweet, soul refreshing breaths of nature's ozone.

"Get out your bicycle and get the fresh air" has been many a physician's advice to the patient seeking relief from nervous strain, stomach disorder, or a long list of kindred ailments. That, too, is our advice to our readers.

An hour or two a-wheel each day, will make a new person of you—will help the lungs carry away impurities from the blood, will clear the brain, quiet the nerves and bring the restless sleep of health.

If you have a bicycle, use it. If you haven't one, you will be surprised to learn how fine a wheel can be bought for a very few dollars from the Mead Cycle Company, Chicago. They are glad to send their catalog to interested persons.

WAUSHARA COTTAGE R. C. REDS,
5731 ROSALIE CT., CHICAGO,
ILL.—M. S. ENSIGN, PROP.

At the time of our visit to the yards of M. S. Ensign we found some very choice Rose Comb R. I. Reds. The females, although they had been making some wonderful records as layers, still retained a nice even red color so much desired by all breeders of Reds, and the male birds were of a rich, even, brilliant red, and all specimens were quite good in type, having good length of body. The hen Susan, the foundation of this flock, had a record of over 200 eggs per year.

Quality, not quantity, is the aim here. You can secure baby chicks or eggs for hatching at moderate prices by addressing Waushara Cottage, 5731 Rosalie ct., Chicago, Ill.

Ira C. Keller, Prospect, O., the well and favorably known Wyandotte breeder, is offering some good bargains in breeders in this month. Look up his ad in this issue and write him for full particulars. Mention American Poultry Journal.

MID-SUMMER BARGAINS.

Our readers are requested to look up the add of Crystal Spring Farm, Snavely Bros., proprietors; C. B. Snavely, manager. They are making a special mid-summer egg sale from their Barred Rocks, White Wyandottes and S. C. Rhode Island Reds, as can be seen from their ad elsewhere in this issue. They also offer real bargains in both exhibition and utility breeding stock. If interested in some strictly money making breeds you will do well to correspond with them at once. They informed us that they have no more baby chicks for sale this season as they are simply "snowed" under. Among the poultry supplies they furnish is "Snavely's Hen Ease," their own preparation, which is an essential to destroy animal parasites. The catalog is illustrated with cuts of poultry from photographs taken December 11 last and a portrait of C. B. Snavely, the manager, graces the front page of the booklet. Snavely Bros. are poultry enthusiasts and young men who are thoroughly reliable. A request by mail addressed to Crystal Spring Farm, R. R. 5E, Lititz, Pa., will bring you one of their catalogs, which you will find has interesting information. Please mention American Poultry Journal.

FREE SAMPLE OF AMATITE—THE ROOFING THAT NEEDS NO PAINTING.

There are doubtless many readers of this paper who are users of ready roofing who are not familiar with Amatite.

This is a new type of roofing which came upon the market a few years ago and has found wide favor on account of its mineral surface which needs no painting. This mineral surface is embedded in pitch, which grips the stone firmly and makes a kind of pitch-concrete surface. This surface is abundantly able to withstand all sorts of weather year after year without any painting.

Its price is no higher than that of the old-fashioned painted kinds. In fact, in many cases it will be found to cost considerably less.

Next time you paint your roofs remember that painted roofings are no longer the only kind you can buy.

In the meantime it is a good idea to look up Amatite. You can get full information and a free sample from the manufacturers on request. Address Barrett Manufacturing Co., New York, Chicago, Philadelphia, Boston, Cleveland, Pittsburgh, Cincinnati, Minneapolis, St. Louis, Kansas City, New Orleans, London, England.

LITTLE RED HEN POULTRY TONIC.

Is the name of a remedy for roup, cholera, limber neck, white diarrhea in chicks, and a general health and egg producing tonic, which is offered our readers in ad on another page in this issue, being made by the Wayne Poultry Tonic Company, Ft. Wayne, Ind. This remedy was formerly put up under the name of Fryer's Roup and Cholera Cure and Egg Producing Tonic.

We have seen some of their many testimonials of the wonderful results from this tonic as an egg producer, also of the remarkable cures it has made, and as the company guarantees it to do all they claim for it you run no risk in giving it a trial. Be sure and send for their literature, it may save the life of a valuable bird for you. Mention American Poultry Journal. Address Wayne Poultry Tonic Company, Ft. Wayne, Ind.

A SPECIMEN LETTER.

From time to time our readers have noted references in these columns to the original dry chick feed for young chicks. Some, however, may not know that the original and standard was first put on the market by W. F. Chamberlain, of St. Louis, and was then, as now, known as "Chamberlain's Perfect Chick Feed," made in St. Louis Mo., as showing the record for this feed, we present the following letter:

W. F. Chamberlain Feed Co., St. Louis, Mo.
Gentlemen: Enclosed find \$5 in full for 200 pounds of Chamberlain's Perfect Chick Feed. We have used it for years and think it the best that can be obtained.

Respectfully,
Mrs. J. W. Harris,
New Virginia, Iowa.

THE SCARCITY OF FARM LABOR.

In recent years the glamour of the city has lured so many young men away from the farms that the question of securing sufficient capable help in the field has become a serious problem.

But thousands of industrious farmers who were handicapped by this condition have not only overcome the obstacle but actually turned it to their own advantage. Realizing that something had to be done they abandoned their old style of farming and took to Planet Jr. farm and garden implements. The practical efficiency and the labor saving results from their use were a revelation to thousands of farmers all over the country. The outcome has been that many farmers who depended altogether on help have been able to work their farms alone, do quicker work and realize larger profits. Other farmers have extended their operations over acres that before the use of Planet Jr. implements seemed impossible. Planet Jr. tools are light, strong and lasting and are fully guaranteed. A farmer can actually save two-thirds of his time, prepare the ground far better and get greater results from their use.

Every farmer should have in his possession one of the Planet Jr. illustrated catalogs. It is as essential as an almanac and will be sent on request by S. L. Allen & Company, Box 1107 T, Philadelphia, Pa., makers.

GOLDEN AND SILVER WYANDOTTES—WM. J. FOX, CABOT, PA.

Parties wanting birds that fit the standard in either of these varieties will do well to write Mr. Fox. We know he has been breeding very fine specimens of these varieties for several years past. Not an occasional one but his entire flock has been way above the average. He has not shown a great deal but his birds have an enviable record wherever shown. They have won at Pittsburg, McKeesport, Beaver Valley and Butler. We suggest you write Mr. Wm. J. Fox, R. F. D. No. 17, Cabot, Pa. Mention American Poultry Journal.

SLAUGHTER SALE.

Chas. Nixon, Washington, N. J., the well-known White Wyandotte breeder, is offering 40 per cent off on his breeding stock this month, and is selling eggs from his choice matings at one-half price. This is your opportunity to get some of the best for very little money. The record of Mr. Nixon's White Wyandotte's at the great New York show in the past is evidence of their superior quality, and the buyer is assured of getting just what he orders from Mr. Nixon. Get in communication with him at once if you want a bargain. When you write please mention American Poultry Journal.

BILL OF SALE.

Bristol, Conn., April 25, 1910.
This is to certify that I have sold and delivery to Mr. Joseph B. Cornish, of Washington, N. J., my entire stock of White Cochins, including my good will, cuts, etc., and that I will not breed said variety again for a term of four years. This includes my winners at Madison Square garden and Boston, and is without a doubt the very best collection of White Cochins in America. (Signed) Adolph A. Anderson.

A BARGAIN IN REDS AND ORPINGTONS

Is being offered our readers by Craig & Mapes, Clearview, Mt. Lebanon, Pa. All their show birds and breeding specimens in Buff and Black Orpingtons, also S. C. and R. C. Red are for sale at half price, in order to make room for their 1,000 head of young birds.

Messrs. Craig and Mapes were prominent winners at several large shows last winter, including Madison Square garden and Pittsburg. If you breed either of these varieties you had better write them. See ad elsewhere.

Mr. E. W. Bogert, proprietor Bay View Poultry Farm, Port Washington, N. Y., the Rose Comb Rhode Island Red man, is offering some of his grand breeding stock for sale in this issue at prices far below their actual value. Mr. Bogert's stock is of the very best and we advise our readers to take advantage of this sale. Get in communication with him.

New Orleans, La., April 22, 1910.
Pittsfield Poultry Farm Co.,
Pittsfield, Me.

Dear Sirs: I take pleasure in acknowledging receipt of your favor of the 18th inst. advising me of shipment promised for the 15th of next month. First, I want to compliment you on your placing my late order so far ahead of promises and expectations. The chickens reached me safely, only one dead on the morning of the 21st after a three nights and two days travel, and in splendid condition. I waited until today before receipting for them to you to better judge of their hardihood. This morning they are out bright and early with the sun, as hungry as can be. From present appearances they are all and more than you claim for them. Will keep you posted from time to time on condition.

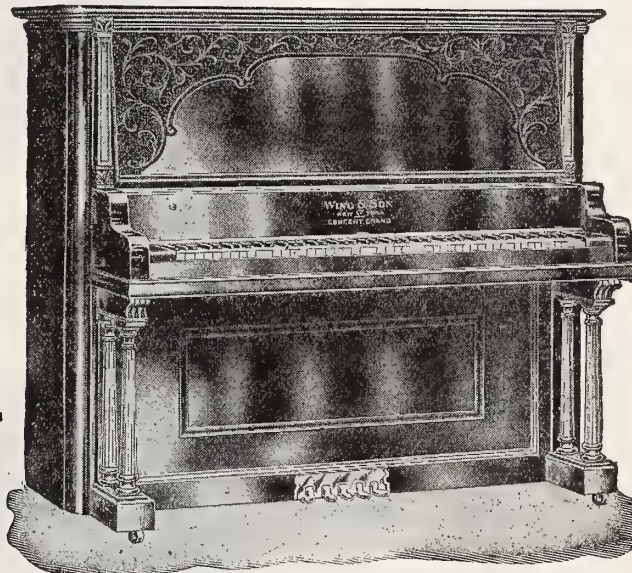

Yours truly,
Ralston F. Green.

Reports from Rockandotte Farm, South-boro, Mass., W. R. Graves, proprietor, state a grand lot of youngsters out and eggs

hatching remarkably well. It is not yet too late to raise some fine chicks, and it should be remembered that Rockandotte Farm produces many of the best White Plymouths and White Wyandottes each season. They are thoroughly reliable and their remarkable record of first prize winners both in their hands and those of their customers at the leading shows of the country with the above varieties is well worth careful consideration by those interested in the breeding of White Plymouth Rocks and White Wyandottes.

W. D. Campbell, the Single Comb Buff Leghorn specialist, of Bloomfield, N. J., reports a fine lot of young stock out and eggs hatching great, twelve to thirteen chicks to a setting. We have handled Mr. Campbell's stock and can recommend it to our readers as strictly high class. In fact we mentioned in these columns a short time ago that his first cockerel at Red Bank, N. J., last winter was the best colored Buff Leghorn male we had seen in years.

Rock-Bottom!

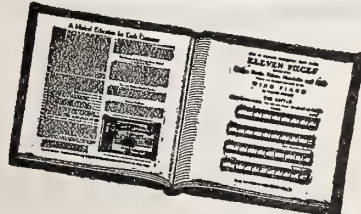

Yes, Rock-Bottom Prices and on a Piano of the HIGHEST Quality

Let us quote you the most astounding prices ever offered on pianos of unexcelled quality. The very rock-bottom prices—prices that would mean ruin to the local dealer or the mail-order houses that buy their pianos from the manufacturer. You will be amazed at the direct-from-the-factory prices on the well-known Wing Piano. We will positively save you from \$150 to \$250 on the purchase of a piano of highest quality, recognized merit. We offer to convince the purchaser by shipping your choice of a piano on approval, all freight prepaid, no money down—absolutely free trial—a four weeks' free trial. **Remember: all freight charges prepaid, no matter whether you keep the piano or not.**

Send for the best, safest, most instructive book of piano-buying information ever compiled; the
Book of Information FREE!

Would you like to know all about pianos, how they are made, how to judge the fine points of quality and price in buying a piano? Then send the coupon for the piano book which we are sending out FREE for the present—the book is free.

The Coupon Brings this 156-Page Book Free

formation that may mean hundreds of dollars to you, whether you buy a piano now or later. Put your name on the coupon and mail it to us AT ONCE.

WING & SON, Est. 1868, 373-386 W. Thirteenth Street, New York

So many of the new style Wing Pianos are getting into homes where the people buy for all cash, that dealers are trying to tell it around that Wing & Son REFUSES to sell on time. This is not true. We sell for cash OR on VERY, VERY EASY PAYMENTS just as YOU choose after your four weeks' free trial. And many of our wealthy men are buying Wing Pianos right now on our easiest monthly payment plan.

Every discount goes direct to you

The Wing Piano stands alone—sold direct from the factory—the only one sold direct from an exclusive piano factory without going through the hands of a single middleman.

When you buy a Wing Piano you pay no salesman's, dealers' or middlemen's profits. You pay no commission to music teachers and supposedly disinterested friends. We cut out all middlemen and you put the discounts in your own pocket. The piano book tells how to save from \$150 to \$250.

This book (156 pages) tells all about material, manufacture, assembling, patented devices and what they do, all about soundboard, action, case, in fact every detail connected with the production of a fine, high grade piano. You will be astonished at the amount of information about piano quality and piano prices, and how to avoid the deceptions of piano salesmen. The New York World says, "A book of educational interest everyone should own." With this book we send our direct-from-the-factory prices on Wing Pianos.

THERMOMETER FACTS WORTH KNOWING.

The successful hatching of chickens is an intensely interesting and delicate operation and too much care and good judgment cannot be used in the selection of an equipment. Success in operating an incubator depends more upon the accuracy of the thermometer and the proper control of temperature than upon any other feature.

You will agree that the best incubator made, if it has an unreliable, inaccurate thermometer, is no better than any dry goods box for hatching chickens.

Thermometers are scientific instruments and are accurate or inaccurate, reliable or unreliable, according to the intelligence and honesty of the manufacturer. The qualities which count most for accuracy and reliability are hidden to the eye, and the lack of these qualities is not apparent, sometimes, until the instrument is employed on the most important operation.

It is not a well known fact, but nevertheless true, that glass shrinks with age, after extreme heating. This shrinkage may be most minute, so small as hardly to be perceptible, but, it is a factor of the most vital importance in the permanent accuracy of a thermometer.

If you have a broken thermometer examine the bore in the glass tube through which the mercury passes as it rises and falls. Try to insert in this bore a human hair. You will then get a fair idea of its size. Now, compare the size of the bore with that of the bulb, which contains the mercury, and at once you will observe that the slightest shrinkage of the bulb must cause a considerable rise of mercury in the bore of the tube, because of the vast difference in capacity between bulb and bore.

After being filled with mercury "Tycos" incubator thermometers are laid away in a big vault to "age" for a long period of time, that the contraction resulting from cooling after blowing the bulb on the end of the tube, may take place before the tube is "pointed" and sealed.

This "ageing" process is expensive, but no expense is spared to make "Tycos" thermometers as good as it is possible to make.

Thermometers which are not properly "aged" frequently show errors of more than 2 degrees. For example, in such a thermometer when 105 degrees is indicated the true temperature would be 103 degrees.

"Tycos" thermometers are filled with only the purest of distilled mercury. Impure mercury will cling to the sides of the bore of the tube and so cause inaccurate readings. Unless the bore of the tube is perfectly dry before being sealed the mercury will quickly become impure and cling to the sides of the tube—again inaccurate readings.

No "sticky" thermometer tube is ever branded "Tycos."

Every particle of air must be exhausted from the tube before it is sealed, as otherwise it is liable to cause separation of the mercury column, or in time oxidize the surface of the mercury and cause it to cling to the sides of the bore.

"Tycos" thermometers are absolutely free of air.

With many thermometers the failure of the mercury to "draw back" is a common defect. If the thermometer is placed in a horizontal or semi-horizontal position the mercury will cling to the tube at the high-

est point and not "draw back" as the temperature falls.

For example, the temperature rises to, say, 106 degrees, and then drops to 103 degrees. The column clinging to the bore will not "draw back," but continues to show 106 degrees. This is due to lack of knack or knowledge of the tube maker.

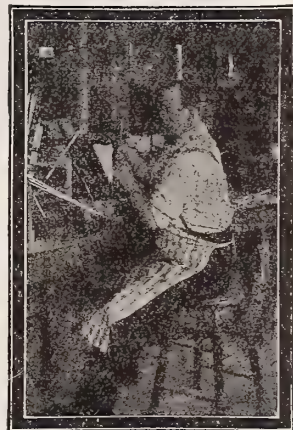

Verifying tests.

"Tycos" incubator thermometers are always furnished with mercury filled tubes which are guaranteed to "draw back" in any position from perpendicular to horizontal.

"Tycos" thermometers are put through a special process of our own, which insures the "draw back."

Thermometer tubes filled with colored "spirit" are much more liable to separation

Making the bulb for "Tycos" Thermometers.

than those filled with pure mercury. Nearly every one has seen the little globules of "spirit" with air spaces between in thermometer tubes, making accurate readings impossible.

"Tycos" tubes, after "ageing," are tested at various points to determine their true

scale, and every "Tycos" thermometer has its metal scale divided to agree exactly with the "test points" of its individual tube.

Each tube has its own scale, and every division line upon that scale is cut separately. If a tube be broken after the metal scale is divided and finished the scale is thrown away, as it is practically impossible to accurately fit a second tube to any scale, and "Tycos" quality does not admit of inaccuracies.

The finished "Tycos" thermometer, before it goes on the market, is compared with standard instruments, under exact incubator conditions of temperature, and any errors detected in testing, scaling or assembling are corrected, or the thermometer is rejected.

If you are interested in results you cannot afford to take chances in incubation. It is a waste of time, eggs and money to try to hatch chicks with an inaccurate, unreliable thermometer.

When you buy a new thermometer or hygrometer see to it that the name "Tycos" is stamped upon it. When you buy a new incubator it's an excellent rule to always ask if it is furnished with a "Tycos" thermometer. It is worth while to ask this question for this reason alone, that you can depend upon it that the manufacturer who furnishes "Tycos" instruments in his machine is giving you the best that money can buy, regardless of the fact that he can buy cheaper thermometers, and this principle of furnishing the best will hold good in the making as well as the equipping of his machine.

Two brands of thermometers may look very much alike—so do mushrooms and toadstools—but the name "Tycos" stamped on the one will be your protection. Insist upon seeing it. Make sure that it is on the thermometer or hygrometer that you buy. You can buy an incubator equipped with it, if you ask for it.

The "Tycos" thermometer is a feature of popular, productive incubators.

BUFF POULTRY FARM—FRED A. POERTNER, BERE, O.

Mr. Poertner is a "Buff Specialist," breeding Buff Orpingtons, Buff Wyandottes and Buff Rocks.

He is a progressive, up-to-date breeder and informs us of many improvements recently made in his plant.

His birds have been winning a majority of the prizes in many shows, including some of the big shows. Mr. Poertner is making special inducements to secure your order now and after July 1 he will sell half his breeders at one-half their value. This is your chance to secure high class stock cheap. Write him for his special July sale circular. His ad appears elsewhere in this issue. Address Fred A. Poertner, R. R. No. 4, Berea, Ohio.

WHITE ROCK SPECIALIST—F. W. PETERS, ERIE, PA.

Mr. Peters breeds the superior kind, White Plymouth Rocks, and his birds have won at Erie, Cleveland, Youngstown, New Castle, Sharon, Ashtabula, where they won special for highest scoring pen.

We find his prices very low, yet he offers to now cut them in half; he also offers to sell his breeding birds very cheap. If in need of White Rocks write F. W. Peters, 460 E. 18th st., Erie, Pa. Mention American Poultry Journal.

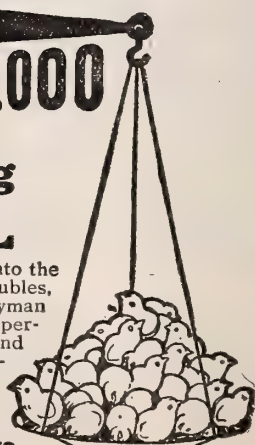

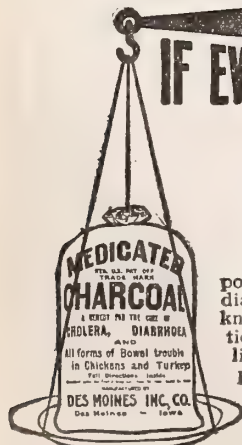

IF EVERY POULTRY RAISER USED OUR REMEDY 150,000,000

MORE CHICKS WOULD ANNUALLY BE RAISED TO MATURITY.

Save Your Chicks' Lives By Using MEDICATED CHARCOAL

We have the greatest remedy for the common chick ailments that ever went into the poultry-yard. Our Medicated Charcoal not only prevents but cures bowel troubles, diarrhoea and cholera. Charcoal alone is a valuable health-giver, as every poultryman knows. We have made it doubly valuable by giving it just the right medicinal properties. It purges, cleanses, purifies the blood, kills germs. It gives health, vigor and life to both fowls and chicks and renders them immune to disease. Carefully prepared under a scientific formula and guaranteed under the Pure Food Law. Cost is nothing compared to the good it does in saving chicks' lives. Don't fail to try it. In bags of convenient size: 10-lb. bag. \$1.00—25 lbs. \$2.25—50 lbs. \$4.25.

Des Moines Incubator Co., 269 Fourth St., Des Moines, Iowa

CLASSIFIED ADS

UNDER this heading ads will be inserted for six cents per word each month for less than three months, and four cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of fifty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers of Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J.

ALL COPY FOR CLASSIFIED ADS MUST REACH US BY THE 19th OF THE MONTH PRECEDING DATE OF ISSUE

BUFF ORPINGTONS—We are sold ahead on Buff Orpington eggs until June 15th. After that date we will sell Buff Orpington eggs from our splendid farm-bred stock, at half price. From our best pens. Eggs that were formerly \$5.00 per setting, reduced to \$2.50; \$17.50 per 100. Eggs from grand utility stock, formerly \$2.50 per setting, reduced to \$1.25; \$9.00 per 100. Large, healthy, vigorous birds, housed in fresh-air houses. Great layers and prize-winners. Grannis Brothers, R. F. D. 12, Lagrangeville, Dutchess Co., N. Y. 1-10-1 yr.

S. C. BUFF ORPINGTON—Eggs from pen of high-scoring hens, headed by valuable Cockerel, bred by the Originators (son of 1st prize Madison Square Cockerel), \$3 per setting. Heavy laying strain. Mrs. O. J. Richardson, Lewisville, Ind. 5-2

WHITE ORPINGTON EGGS FOR HATCHING. Pen No. 1 headed by that grand big cockerel that won 1st at the great 1910 Philadelphia Show. This cockerel is a wonder in type; big, broad, long back; deep, full breast; extra short shank, and is the best White Orpington I could buy at any price. Mated to four hens that I believe are equal to any four hens owned by any one breeder in America. They have the true Orpington shape, very deep bodied, deep full breast, extra short in shank. Will spare a few settings from this grand pen at \$10.00 per 15 eggs. Pen. No. 2 headed by one of Mr. Kellerstrass' best birds, mated to ten extra low down, grand type hens, the kind you are all looking for. Eggs from this pen, \$3.00 per 15 eggs. I paid Mr. Kellerstrass \$30.00 per setting for these same eggs. Ten years a breeder of Real Orpingtons. Member National White Orpington Club. Member first Orpington club of America. Ed. Biederstadt, Majestic Theatre, Madison, Wis. 5-3

CRYSTAL WHITE ORPINGTONS, Kellerstrass Strain. Eggs from best mating, \$3.00 per setting of 15. Securely packed. Satisfaction guaranteed. Harvey K. Brown, Lock Box 441, Highmore, So. Dak. 5-2

S. C. BUFF ORPINGTONS. Cook Strain. Yard one is headed by a grand cockerel, score 92½, weighs 10 pounds, mated with seven grand hens, selected for size, type and color; \$2.00 for 15. Yard two consists of 10 fine pullets, headed by a beautiful colored cockerel, score 92½; \$1.00 per 15. Ernest Sanderson, Baraboo, Wis. 4-3

S. C. WHITE ORPINGTONS, large, vigorous birds, best layers. Ribbon winners. Eggs from best pens, \$2.00; second pens, \$1.00 per 15. S. S. Kanaga, Taylorville, Ill. 5-2

S. C. BUFF ORPINGTON EGGS—Cook's, Williams' strains, \$1.50 per 15; \$7 per 100. L. M. Voorhees, Jerseyville, Illinois. 5-2

KELLERSTRASS STRAIN CRYSTAL White Orpington eggs, \$2.00 15. Thos. Brogden, Rush Lake, Wis. 5-2

KELLERSTRASS WHITE ORPINGTONS—wonderful layers; 15 eggs \$1.50. Mrs. John Stokes, Route 4, Kankakee, Ill. 5-3

SETTINGS FROM PRIZE WINNING Buffs. Bred for shape and color. Splendid layers. Settings of 15, \$2.50, \$1.50 and \$1.00. Also have some stock for sale. Martin Barklage, St. Charles, Mo. 4-3

SINGLE COMB BUFF ORPINGTONS exclusively. Prize winners wherever exhibited. McClave strain. Heavy egg producers. Golden buff to the skin, large boned, well shaped. Eggs, \$3 and \$2 per 15. Seventy-five per cent fertility. Gray Call Duck eggs, \$1.50 per 15. C. H. Figuers, Fern Hill Poultry Plant, Wake-man, O. 3-4

ORPINGTONS—BUFF eggs, \$2 for 25; Black and White, \$4 per 25. Exhibition matings higher. Send 10c for Black Orpington Club Catalog, containing colored photograph of Club Empress, greatest hen that ever lived. Send 25c for year's subscription for Orpington Magazine. Milton Brown, Cheviot Farm, Cincinnati. 5-3

CLOSING OUT SALE—S. C. Buff Orpingtons, 10 pullets and 1 cockerel. These are excellent colored stock, up to weight, and good Orpington shape. Am selling them in order to breed the S. C. White Orpingtons exclusively. Pullets, \$2 to \$5; cockerels, \$3. Satisfaction guaranteed. Mackey's Poultry Farm, Nevada, Iowa. 3-10-11

KELLARSTRASS CRYSTAL WHITE ORPINGTONS. Carefully selected for their laying qualities. Cut prices on eggs. High class stock. Get my free circular before buying your eggs. H. King, Tappan, N. Y. 4-3

ORPINGTONS.

WHITE ORPINGTONS.—May and June are ideal months for hatching. In our White Orpington eggs we offer Great Quality at very reasonable prices. Our young stock is reared on free range on our 140-acre farm, and all our stock is housed in fresh-air houses, so that we get the finest result in health, vigor and size. Lots of prize-winners in our breeding pens. Forty-five prizes on our Orpingtons last winter. None but heavy layers in our pens. You may not do yourself justice unless you send for our Mating List before buying eggs. We claim to give greater value in our White Orpington eggs than can be obtained elsewhere. Anyway, send for our Mating List, and see how we substantiate our claim. Grannis Brothers, R. F. D. 12, Lagrangeville, Dutchess County, New York. 1-10-1yr

WORLD'S BEST ORPINGTONS. White, Buff, Black, Single, and Rose Comb. Winners of over 1,200 prizes at America's best shows. Catalogue. We can start you right with chicks or eggs. J. S. Haupt, Box 97, Fairview Farm, Easton, Pa. 5-3

SHEPPARD'S FAMOUS ANCONAS THE WORLD'S BEST

Have won three times as many first prizes and silver cups, four times as many special ribbons, as all Ancona breeders together. In both Single and Rose Comb classes in the great national 1910 meeting of the International Ancona Club. For four consecutive years my birds have won four times as many first and second prizes at the Madison Square Garden show as well as all my competitors combined. Have won first at Dairy show, London, England, and many firsts at Cleveland. My birds are not only noted as prize winners, but are famous for being such heavy winter layers. A flock of Sheppard's Famous Anconas has laid the wonderful average of 256 eggs for each hen for year. Can furnish you with hatching eggs that will produce prize winning and heavy laying stock. Rose or Single Comb. Circular free.

"Quality" Barred Rocks

Breeders for Sale Now

I have hatched a great number of chicks from my superb pens, hence all of my CHAMPIONS OF THE BREED are offered at low prices. There is time now for you to get some fine chicks from these excellent breeding birds. I have cockerel and pullet breeders in plenty and they will go at right prices. If you want some of the stuff that I have reserved for my own breeding get your orders in now. Before the egg season started I was sold out of stock and returned many orders. Now if you want the quality you could not get before let me know. Correspondence is a pleasure if you mean business. I have one thousand chicks growing and invite you to come and pick out what you want or will take great pains to tell you exactly what it is.

Amos Burhans :: Box A, Waterville, Minnesota

First Prize "Ringlet" Cockerel and Winner of Special Prize for Champion Male at Madison Square Garden, New York, Winter of 1908, from Photograph.

Worth More Money than Any Barred Rock ever Produced, Living or Dead

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908 and 1909

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection, and created a Sensation as the Finished Achievement in Modern Barred Rock Breeding.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My clean sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show birds fit to win in any competition. Richly illustrated 58-page catalogue upon request; it is full of original pictures of New York winners from life. EGGS from the world's finest exhibition matings, one setting \$6; two settings \$11; three settings \$15; four settings \$18. Address

**Successful Egg Farming**

Among people who can afford luxuries there is great demand for a regular supply of fresh eggs. The few growers who can furnish them regularly, Winter and Summer alike get very high prices.

The Corning Egg-Book

(entitled "\$6.41 per Hen per Year"), tells how two men, in poor health, starting four years ago with only thirty hens, made from their little egg-farm a clear profit of over \$12,000 last year. It tells all about their experience, their failures, their methods and how others men or women, with good sense, care and faithful work can make money in the same way. Not a detail left out.

The Corning Egg-Book is sold in combination with the Farm Journal, Philadelphia, Pa., and we have made arrangements to make this

Special Offer

For \$1.00 (cash, money order or check) we will send postpaid the Corning Egg-Book and the Farm Journal for two years, and American Poultry Advocate 2 years, all for \$1 if order is sent at once to

American Poultry Advocate
727 Hogan Block, Syracuse, New York

**WORLD'S FOREMOST
WHITE WYANDOTTES**

Won the highest honors at New York, Boston and every prominent show in the United States and Canada, clear to the Pacific Coast, all past season, and have done the most winning for many years. Grand stock and returned at my expense if not satisfactory. Send for circular and see who is the winner and prices of eggs.

J. H. Jackson : : Lock Box 88, Hudson, Massachusetts

BIE'S BARRED PLYMOUTH ROCKS

At four large shows, i. e., Kenosha, Chicago, Milwaukee and Waukesha, during the past season, we won 8 firsts, 4 seconds; 7 thirds, 6 fourths, silver cup and several shape and color specials and at Milwaukee, besides winning 1, 2, 4, 6, 7, 9 and 10 on pullets, we won the grand specials for best display in the American class. Our prize winners and their sires and dams are all in our yards from which we will sell eggs at \$5 per 15; \$9 per 30; \$12 per 45. Half price after May 15th. Will also sell 10 males and 40 females that are in our breeding yards at a great sacrifice.

Geo. H. Bie : : : Racine, Wisconsin

WHITE ORPINGTONS

Kellerstrass Strain—My stock is bred from first prize winners at the largest shows in the world, including the Great Crystal Palace Show, London, England. My birds won at Butler, Pennsylvania, February, 1910, first pen, second cockerel, third, fourth and fifth pullet, on five entries. At Pittsburg, Pennsylvania, second pen and second cock on three entries. These winners and other grand specimens are in my breeding pens. I have quality that will please you. Mating list free. Egg prices reduced to \$2 and \$3.50 per 15. Special sale of breeders at reasonable prices. Write today.

Diseases of Poultry

— BY —

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance.

With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

American Poultry Journal Pub. Co.

American Poultry Journal } ALL THREE FOR
Western Poultry Journal } 75 CENTS
Farm-Poultry } Reg. Price, \$1.50

AMERICAN POULTRY JOURNAL is the oldest, largest and handsomest poultry paper in the world, and is conceded to be the leader in all things pertaining to poultry. Is copied by both old and new poultry publications. In fact, it has no equal. Now in its 41st volume.

FARM-POULTRY, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

WESTERN POULTRY JOURNAL, published at Cedar Rapids, Iowa, is in its 21st volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, thoroughly cover the entire field of poultry literature, and make a poultry library in themselves.

THE GREATEST COMBINATION EVER OFFERED

and especially so when you take into consideration the fact that American Poultry Journal contains from 68 to 188 pages of interesting matter, any number of which is worth more than we are asking for one year's subscription to all three magazines. This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

Let Us Start You In Custom Hatching

**Candee Incu-Brooder is a constant money-maker
and will last you a lifetime.**

Cheapest to operate—Because heat is supplied only to compartments in use.

Highest Efficiency — Because patented heat control and thermostats maintain a positive, even temperature.

Simplest—Because no float is used and its regulation cannot get out of order.

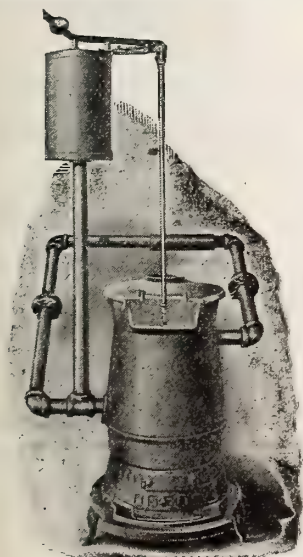

The Incu-Brooder is built in 600 egg sections with a capacity from 2,400 to 20,000. More sections can be added at any time.

Candee Machines In Use Everywhere

Practical Poultrymen in every State are using the Candee Hot Water Brooding System and they will tell you of their satisfaction with it. It is recognized as the best and most lasting—and every Candee machine is in steady operation. Now the Incu-Brooder is winning the same reputation and actual tests show its superiority.

All Candee Machines are fully patented and no infringements will be permitted.

Candee Brooder Heater and Pipe Connections

Candee Hot Water Brooding Systems

Cheaper than Kerosene—First cost is lower.

Absolutely Safe—Hot water is safe and there are no fumes from it.

Easily Tended—Requires but two minutes morning and night. No wicks to trim or lamps to fill.

Costs the Least to Run—Cost of coal burned is far below cost of kerosene used in oil machines

SEND TO DAY FOR CATALOGUE

Spend Your Vacation at Greenhurst**The Ideal Spot on Chautauqua for a Few Days or Whole Summer's Stay**

For those who want a quiet and refined home for the summer, where pleasure without limit and the very best of accommodations may be obtained at moderate cost, there is no other place like Greenhurst-on-Chautauqua, which is now under the able direction of George F. Hurlburt, known far and wide for his capable management of the Sherman House of Jamestown and the Grand Hotel of New York City.

Here every pleasure, comfort and accommodation of the most modern inland watering place may be enjoyed. Every facility for rest and recuperation or a lively good time is at hand. Just across Lake Chautauqua is Celeron, the Coney Island of Western New York. Three miles above Celeron is located the country club with a very attractive golf course, and an hour's ride by express steamer from the Greenhurst landing is Chautauqua, the most noted of all semi-educational summer resorts where the leading lights of literature, music, science and religion come together each summer for the mutual benefit of all. Ten minutes walk from the Greenhurst Hotel, is the Chado-koin Boat Club with every kind of craft from a row boat to a palatial launch.

Every imaginable recreation is available—boating, fishing, automobilizing, golfing, swimming, bowling, billiards, tennis, archery, croquet. Add to this the beauty of Lake Chautauqua, the delightful sylvan surroundings, the splendid service and moderate cost of living at Greenhurst-on-Chautauqua, there is no other place that offers so many wonderful advantages at like cost.

Most summer resorts run to one extreme or the other—they're either too quiet or too boisterous. Greenhurst is neither one nor the other, but both.

Address George F. Hurlburt, Grand Hotel, New York City—or Jamestown, N. Y., for full particulars as to rates and accommodations. Get this information now and lay your vacation plans accordingly.

American Poultry Advocate - - - } Regular Price \$2
Poultry Item and Commercial Poultry

AMERICAN POULTRY JOURNAL needs no introduction, as it is the oldest, largest and best poultry paper in the world. Is the leader of the poultry press, and now in its 41st volume. No poultryman can afford to be without it, as it has no equal.

AMERICAN POULTRY ADVOCATE, the great New York state paper published at Syracuse, and full of good reading matter, is always welcomed by the subscriber. Now in its 18th volume. It is conceded to be one of the best poultry papers published in the east.

POULTRY ITEM, published at Sellersville, Pa. Now in its 12th volume, and although a young publication compared to the others embraced in this offer, it is safe to state that Poultry Item is rapidly pushing toward the front. Full of valuable information and complete winnings.

COMMERCIAL POULTRY, published at Marseilles, Ill., is now in its 18th volume. True to its name, it instructs the reader on poultry as a business. Its volumes contain articles by excellent writers who contribute regularly and make it interesting for the reader.

When reading this do not lose sight of the fact that American Poultry Journal contains from 68 to 188 pages of interesting reading matter; that it has a strong corps of field men who report on conditions in their territory each month so that it contains the "newsiest" news of the poultry world. A single copy is worth more than we ask for one year's subscription to all four.

\$2.00 Value for Only \$1.00—This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address

Owen Farms

THIS YEAR'S SHOWING

We do not expect to show at all this year and this means something to you. We shall govern ourselves accordingly and sell stock that we otherwise would not think of selling. Again we are preparing to make early agreements with our customers as to fitting a string for showing at the important shows, as we will not be represented. We will be glad to make our early proposition for guaranteed winners. We have been in the show room every year for six years, this last year showing over 300 birds, and we believe we merit a rest and feel that in the end we can do many things for our customers that we have not yet done. Early correspondence is both solicited and advised.

BARGAINS IN STOCK

Are you looking for bargains in stock? If so, why? Surely so you may get a good value for a small expenditure of money? Have you ever tried to carry over 150 or 200 cockerels for cock birds, from the early summer till late autumn? It is difficult to do it; takes a lot of space and is expensive. We have a large number of females in all varieties to go with the male birds. We shall not issue a bargain sheet as in previous years, but ask our customers to write us definitely just what they wish and we will quote to them exactly what we think they want. We shall make an individual matter of each and every application. Both Mr. Delano and Mr. Owen are going to devote themselves to this purpose for the next two or three months and you will get satisfaction, both in your correspondence and in the birds we offer. Please remember we cannot get anywhere unless you are frank with us and tell us what you want.

BARGAINS IN EGGS

Why are you looking for bargains in eggs? Because you want the best and are limited in the amount of your expenditure. Now, what do you have to give up in getting a bargain? I tell you not quality, not satisfaction in hatching and in fertility, in fact nothing that makes success in following years. All you give up is the time at which you can purchase. You can get breeding birds from eggs hatched in June and July, up to the 10th of August, and in quality you can get a foundation that you cannot get in any other way, and in getting our eggs at half price after June 1st from Plymouth Rocks and Wyandottes, and after June 10th from Buff, Black and White Orpingtons, you will get the best of it in quality and hatching and in the foundation stock for breeding next spring at a low price. This is particularly true of White Orpingtons, which we shall set right through, as the quality is most extraordinary.

BUFF ORPINGTONS

Nearly every one is aware what we have in our Buff Orpington flock, and when we suggest that you get into correspondence with us concerning it you will readily understand that we are looking out for your interest as well as our own. Our trade in this variety has been enormous. It is more popular than ever and we are sure that it is going to continue to advance in popularity and in importance. Our winnings in this and other varieties you can get from our catalogue and mating list, which we will only be too glad to send you if you have not received it. Males and females in this variety at all prices and one-half of our flock which we will be willing to sell any time after the middle of June.

BLACK ORPINGTONS

In this variety of the Orpingtons we have some sterling males and females. A goodly number of cockerels carried over and can spare you such as you are wishing in any quality you may name. That this beautiful, large, typical Orpington is coming more popular every day is true and you can make no mistake in getting a small foundation flock for your use as show birds during the coming winter and as breeding birds the following spring. Our catalogue tells of the origin of our stock and how successful it has been both in England and in this country, and that no one can offer better breeding stock or show birds in this variety is a fact.

WHITE ORPINGTONS

This is where we can meet your wishes after June 15th. We have and will sell some of the grandest Whites that have ever been imported into this country and have only to tell exactly what you want, the quality you wish, and the description we can give you of particular birds will certainly induce your further consideration and final purchase. There is no doubt that today we are better equipped and in shape to give you a grand pen of birds and a good start in the White Orpington than any other breeder.

WHITE WYANDOTTES

What we said above about showing means something particular in White Wyandottes. We have the finest birds to offer that any one could expect to find, and if you tell us what you wish to accomplish in the show room and in breeding, and if you are really looking for something that is particularly good and at a reasonable price, don't fail to get all the information we can give you in regard to White Wyandottes. Our first pen at New York, which you have had a chance to see in the papers recently, our winnings at Boston and New York, which were phenomenal, indicate the quality of birds we have, and we shall be glad to take up special propositions for showing in the autumn or winter, or the consideration of stock which we believe will develop into the winners. We will make you a special price at this time.

BARRED PLYMOUTH ROCKS

For Barred Rock breeders we have something especially good. A large number of females, both in cockerel and pullet matings, that are exactly what you are looking for to strengthen your string for showing and to make grand breeding birds for you for the following year. In male birds we still have a fairly large number and can give you something that will be both pleasing and satisfactory at the price. We urge you to see what we have. Our first pen at New York, which has been in all of the papers, gives you an idea of the shape and quality of birds that we can offer. We also won the first pen in the pullet mating, and in both lines we can probably do more for you, and will, than any one else.

WHITE PLYMOUTH ROCKS

On account of our enormous egg trade in White Plymouth Rocks we have a very large number of exceptionally fine male birds and females, which at this time we are ready to offer you. As near perfect in type as they grow, as white as any White Rocks in the world, and possessing the quality that in every case wins both for ourselves and our customers. We are positive that you cannot do yourself greater good than to get in touch with us promptly in relation to stock which we have to offer.

DON'T BUILD

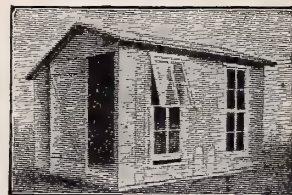

that new hen-house or fix up the old one but get our large 100-page catalog and circulars (over 120 illustrations) showing POTTER PORTABLE SANITARY POULTRY HOUSES, Roosting and Nesting Outfits, Perfection Feed Hoppers, Trap Nests, Feeds, and supplies of all kinds. Potter Fixtures have been on the market nearly ten years. They are made in 3 styles and 12 sizes, and are complete, convenient and sanitary. Our Portable (K. D. made in sections) Hen-houses, Brood Coops, Pigeon Lofts, are made in 20 styles and sizes, from a coop 2 ft. square to a complete house 8x80 feet, or longer, at lowest prices. House shown is 8x10 feet complete with 8 feet Potter Outfit for 30 hens for \$40. A fine house at a low price. If you need a house or coop of any kind do not fail to find out about the Potter line before buying or building.

DON'T KILL

or sell your laying hens, use the POTTER SYSTEM and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The POTTER SYSTEM is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens. Used by over 30,000 satisfied poultry keepers who are saving dollars every year. Our new 100-page Potter System book, "Don't Kill the Laying Hen," contains the secret and knowledge about laying and non-laying hens. It's a revelation to poultry keepers and you will learn how you can use the Potter system on your flock; keep less hens, get more eggs and make more money using it. Write today sending 2 RED STAMPS to cover postage on our large catalogue and circular, telling all about Potter Poultry Products made for Particular Poultry People. If you are particular and want to make more money on your flock you will write us today.

A Little Poultry and a Living

Is the title of a little booklet we will mail free. It was written by the author of the PHILO SYSTEM BOOK, who makes every one of his hens pay him a profit of \$50 to \$100 each.

Metal Mothers

**Our New Discoveries
Make Poultry Keeping
Easy and Profits Sure**

Valley Falls, N. Y., Nov. 18, '09.

The Cycle Hatcher Co., Elmira, N. Y.

Sirs:—I have used your incubators, both the Cycle Hatcher and Brooder Hatcher, during two seasons, and found them very satisfactory, as they were easily managed and gave excellent results every time. The Brooder Hatcher makes a convenient place for brooding the little chicks when first hatched, before putting them into the fireless brooders. Very truly yours,

(Rev.) E. B. Templar.

The Cycle Hatcher Co., Elmira, N. Y.

Gentlemen:—No doubt you will be interested to learn of our success with the Cycle Hatchers. We have cleared over \$960 running our hatchery plant consisting of 56 Cycle Hatchers. We are pleased with the results, and expect to do better the coming year. With best wishes, we are, very truly yours,

(Mrs.) C. P. Goodrich,

Elmira, N. Y.

Our machines were used exclusively in the original Philo System plant, where over \$1,500 FROM 60 HENS IN TEN MONTHS has been cleared from the sale of eggs, baby chicks and fowls raised on a city lot 40 feet square. One of the largest hatching plants in America saved over \$700 this year by using our system of brooding. We sell the best brooder ever made for only \$2.50.

One party hatched and raised \$500 worth of poultry last year with four Metal Mothers, and hundreds of others are delighted with our machines and our new way of raising poultry. Our combined machine hatches and broods perfectly at the same time with only one lamp and one-fifth the oil used in other machines. Once filling the lamp completes the hatch. It runs as steady as a clock in any room from cellar to garret, and our Long Burning Safety Lamp runs on for weeks without attention. It is the only machine that airs the eggs in the natural way and applies the heat to the chickens like the mother hen.

Our 1910 Pattern Metal Mothers

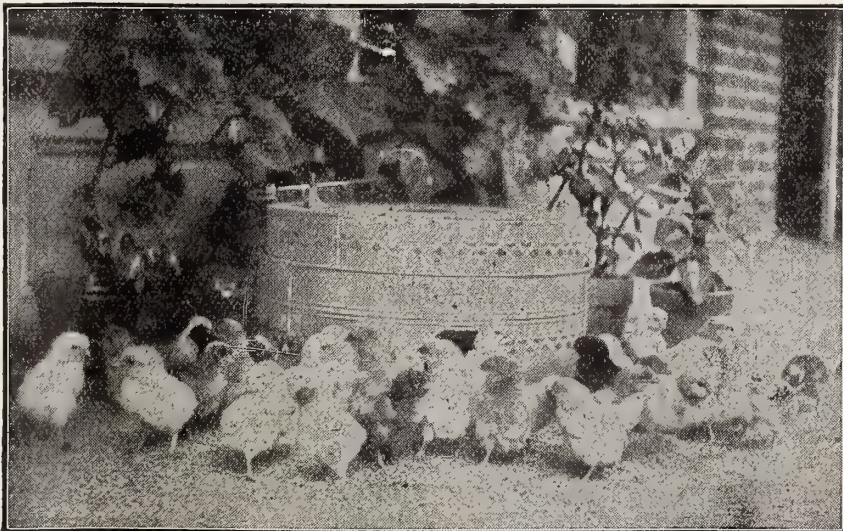

are the perfect results of the latest discoveries in artificial incubation. They will hatch hens, ducks, turkey and goose eggs equally well and at the same time. Regulation of moisture and heat entirely automatic.

Large stock of machines at Oakland, Cal., our western shipping point. Write the Cycle Hatcher at the above address for Pacific coast prices.

One Metal Mother complete, \$7.50; two, \$14; four, \$24. One Cycle Hatcher complete, \$5; two, \$9; four, \$17; six, \$24.

The booklet "A LITTLE POULTRY AND A LIVING," fully illustrated and describing these machines, and a complete line of the most approved poultry appliances, mailed free.

Cycle Hatcher Co., 214 William St., Elmira, New York

100 PER CENT PROFIT

THE FIRST YEAR

Keeping Poultry by the Philo System

PHILO NATIONAL POULTRY INSTITUTE. 27,000 SQUARE FEET OF FLOOR SPACE

We Guarantee

That any intelligent person can make a profit of 100 per cent on an investment in the poultry business by the Philo system, and our guarantee is backed by

One Hundred Thousand Dollars

worth of real estate in the city of Elmira, consisting of thirty acres of land and the complete plant of the Philo National Poultry Institute. This entire plant and equipment has been completely paid for out of the earnings of the poultry and poultry supply business by the Philo System.

The discoveries made to perfect the Philo System are the results of forty-one years' experience by one person experimenting and investigating the poultry business. We know that still larger profits can be and are being made by following our instructions, or we would not risk a hundred thousand dollars to back our guarantee. Our book, "The Philo System," tells how to do the work from start to finish and gives you the right to use all our inventions and discoveries to get such wonderful returns.

If in doubt about our responsibility and the value of our guarantee, write Mr. D. M. Pratt, President of the Second National Bank, Elmira, New York, or any other reliable party.

Send us \$1.00 and we will send you promptly our complete book and our agreement.

E. R. Philo, Publisher : 629 3d St., Elmira, N. Y.

CONTENTS OF THE PHILO SYSTEM BOOK:

Artificial Heat

Better poultry without it.

Artificial Incubation

About opening incubator during first week.

Avoid too much cooling.

Changing position of eggs.

Cooling the eggs at night.

Cooling the eggs on special days.

Overcoming defective work of first week.

Generation of heat by growing chicks.

Never set eggs in two layers.

Rules for second and third weeks.

Temperature of working room.

The cause of failure.

The instinct of the hen.

To raise temperature quickly.

Use of woolen cloth and hot water.

Watch the damper and regulator.

Best Age for Breeders

Best results from year-old hens.

Hatching in February and March.

Hens from five and ten years old.

Winter hatched pullets quick moulters.

Breeders for Broilers

Breeders for Exhibition

American Standard of Perfection.

Chicks from first eggs after mating.

Keeping careful records.

Use of leg bands.

Breeding in Line

Bad effect of in-breeding.

To insure good qualities of your birds.

Brooders

Disadvantages of wooden brooders.
Brooder coop advantages in getting fertile eggs.

Brooding without artificial heat.

Baby chicks outdoors in zero weather.

Large brooders a mistake.

Metal Mother first week in cold weather.

Number of chicks in fireless brooder.

Use of fireless brooder.

Perfect conditions and better birds.

Care of Breeding Stock

Adaptability of our summer and winter coops.

Hardening fowls to cold weather.

Must be protected from draughts.

Wintering breeders in barn loft.

Coop Construction

Of brooder coop.

Of summer colony coop.

Of winter colony coop.

Of combination economy coop.

Double winter coop.

Fireless brooder.

Feed hopper.

Galvanized iron trough.

Egg Production

Early laying pullets best producers.

Good points of a productive hen.

How to get large egg yields.

Large hens not best.

Laying in cold weather.

The color of eggs.

The hen for market eggs.

Measuring food bad practice.

Sprouted oats.

The rest periods.

Eggs When Prices Are High

Bringing the highest market price.

Hatching in winter.

Out-of-date methods.

Summer and fall chickens.

Natural breeding season.

Fertility

Fertility and feeding.

Fertility after mating.

Fertility after separation.

Results of change in mating.

Sure results after two weeks' mating.

Food

Cooked lean beef.

Cut clover.

Chick's first food.

Feeding the first three weeks.

Feeding from three to eight weeks.

Feeding from eight weeks to maturity.

Full crops at night.

Formula for wet mash.

Food for cold weather.

Green cut bone never given.

Green food at 15 cents a bushel.

Give hens all they will eat.

Hens properly fed.

Never feed grease except for fattening.

Oats spaded in dirt daily.

Straw on floor.

Sprouted oats.

Supply bulky food in the morning.

Water supply and egg supply.

Winter food.

Gapes

Grading

Green Cut Bone and Infertility

Hatching

Get ready before ordering eggs.

Keep in advance of your business.

Hatching with hens.

Active hens the best setters.

Changing eggs in the nest.

Cleaning eggs.

Nests on ground no better than in the barn loft.

Raising the chicks in our brooders.

Saving the chicks by removing the eggs.

The causes of poor results.

Helping the Chicks in Hatch

Chicks properly grown can all be saved.

How to save them.

How to Start

Buy the best eggs obtainable.

Foundation stock hatched in February and March.

Guaranteed fertility.

Starting with two pairs of birds.

Starting where you now live.

How to Use Coops

Large and Small Flocks

Egg production.

Advantages of small flocks.

Leg Weakness

Indigestion the cause.

Remedied by care in feeding.

Seldom occurs when chicks are on the ground.

Lice

Put powder on brooder cloth.

Use of boiling water.

Use of wood ashes for hens.

Location

A combination for an acre lot.

Natural grit.

Sandy and gravelly soil.

Stony and lumpy soil to be avoided.

The new Philo plant and grounds.

Keeping Eggs for Hatching

Evaporation of moisture decreases the vitality of the chick.

Germ killed by high temperature.

Low temperature not disastrous.

Natural position for keeping eggs for hatching.

Not best to turn eggs daily while waiting.

Temperature and evaporation.

Temperature.

Two weeks the limit for keeping eggs to hatch.

Setting eggs the day they are laid.

Moisture

Evaporation while waiting for hatcher.

Excessive moisture produces too large a chick for the shell.

Supplying moisture the last week.

Too little moisture and the results.

Pedigree Breeding

Banding chickens.

Expanding the leg bands.

Mating the birds.

Record difficult to keep.

Sixteen toe marks.

Plans for a Large Plant

600 coops on two acres to accommodate 10,000 chicks.

Poultry Helps the Garden

Mixing the fertilizer with soil.

Value of the fertilizer.

Pullets

Properly matured in space of one and a half square feet.

Winter hatched pullets as breeders.

Results of Philo System

\$1,500 a year from 60 hens.

\$1,500 a year for market eggs from 1,000 pullets.

Average eggs hatched and chicks raised.

Another estimate of profits, chiefly from broilers.

Cost of starting a broiler farm with 60 lampless brooders, coops and incubators.

Setting brooder-hatcher Dec. 10.

Plan of new grounds.

National Philo Poultry Institute.

Selecting Breeders

Advantages of selecting new breed.

As to the superiority of breeds.

Breed a matter of choice.

Making setters of non-setters.

Productiveness between rest periods.

Strain considered above breed.

The good breeding hen.

Width of hen and general make-up.

Selection of Hatching Eggs

Less than 24 ounces or more than 32 ounces per dozen never used.

Shape and color of shell important.

The test by sound.

Weight of 25 ounces per dozen preferred.

Sex Control

Selection of male and female.

To raise 70 to 90 per cent cockerels.

To raise nearly all pullets.

Vitality of male and female.

Testing Eggs

Theories without foundation.

To make a living from poultry.

Not a "get-rich-quick" scheme.

Ordinary good stock.

Prices of eggs and profits per hen.

Strict attention to business daily.

Two-Pound Broilers

In eight weeks.

Raised in space of one square foot.

Tender as squab when closely confined.

The food and care of broilers.

To prevent leg weakness keep on spaded ground.

Use of salt and of milk.

What investment and profit to expect.

Winter Quarters

Adaptability of houses already built.

Comfort of the fowl.

Importance of ventilation.

Keep flocks small.

Ground not so important for mature hens as for young and growing chickens.

Value of Sunshine

**Single Comb White Leghorns and
Rose Comb Rhode Island Reds**

Our birds are better than ever, and to prove it, look up my winnings at Buffalo on S. C. W. Leghorns: Won 1, 3, 5 cock; 1, 3, 5 hen; 1, 2, 3, 4, 5 cockerel; 1, 2 pullets; 1 pen; 130 in. class. A few settings of eggs to sell. I have 250 chicks out from first S. C. W. Leghorn cockerel, Buffalo, now and more coming, never had such luck. If you are looking for show birds let me know. I am going to sell just four S. C. W. Leghorn cock birds this season and a few hens. I can please you. I know my Reds are better than ever. I have eleven cocks for sale and a few hens. Write your wants and see what I can do for you.

ORPINGTONS

KELLERSTRASS' STRAIN of CRYSTAL WHITE ORPINGTONS

Have you gotten your show winners ready for the early fall shows? The state fairs are right at hand. Are you going to show there? If you are not satisfied that the birds you raised this year will get you the BLUE RIBBONS, we can supply you with them. We did not raise as many birds this year as heretofore. We are not raising as many birds as we have in past years, but we are raising better ones, which is saying a whole lot, because you remember the last show where we exhibited was at BALTIMORE in JANUARY, 1910, where we won

making a clean sweep, and 131 birds in the class, from America, England and all parts of the world. We have cockerels and pullets hatched the early part of January, that now tip the scales at 6 and 6½ pounds. They are the kind that will be heard from during the coming show season, and if you are in need of any winners, write us and tell us just what you want and what you are willing to pay, and we are sure we can supply you with the BLUE RIBBON WINNERS.

BREEDING STOCK

at living prices. The most successful season we have ever had has just closed. We offer our patrons selections from the choice breeding pens that have been the chief instrument to our success at ridiculously low prices. DISCOUNT THE FUTURE and put yourself in shape for the next breeding season. We guarantee safe delivery to any part of the world. Prices quoted to meet your requirements promptly upon receipt of inquiry.

Our Young Stock: We are glad to announce that never in our history have we had such a splendid lot as this season. Every bird was hatched before March 15th and has been kept growing without interruption. This is the result of many years' experience in this direction and it is birds like these that make the choicest of breeders. We have already (June 1st) booked a large number of orders for cockerels for delivery next fall: it will insure you the best specimens if you order early. We have ONE THOUSAND CHICKS FROM EXHIBITION MATINGS now on range. Fully one-half of these are from the pens (1) headed by 1st Boston cock, 1910; (2) containing 2d Boston hen, 1910, and 1st Portland hen, 1909; (3) containing 1st Boston exhibition pen, 1910. We feel safe in saying WE SHALL HAVE WHAT YOU WANT IN 1910-11 SHOW BIRDS, and it will not cost a fortune to get them.

The Most Important Side of Our Business is Hatching Eggs and Day-old Chicks. Since August 1, 1909, all the product of our immense flock has been devoted to orders for chicks and eggs. We have been unusually successful in both branches, and today do not hesitate to guarantee safe deliveries in any part of U. S. and Canada. This year with larger, better flocks and better facilities we are in even better position to please our customers. We solicit orders for hatching eggs for fall delivery in any quantity. We ship A1 eggs on the day they are laid, carefully packed in excelsior. Our method of packing is the very best. Prices of eggs: \$1.50 per 13; \$4.50 per 50; \$7 per 100.

We propose to make a new departure this season and will be prepared to furnish day-old chicks for fall delivery in any quantity upon proper notice. BROILER RAISERS, THINK THIS OVER! Will this not save you a lot of unnecessary trouble and expense. Prices of chicks after August 1st, \$15 per 100. Don't forget we are prepared to furnish you anything in Brd. Rocks, Illus. catalog free. To insure inquiries prompt attention use street address.

SOME POINTED CRITICISMS

The True Value of Eggs—Prices Lower and No Guarantee When Selling Eggs —The Best Fowl on Earth?—The Sex Question

Written for American Poultry Journal by Dr. H. F. Ballard, Chenoa, Ill.

AN advertisement in the American Poultry Journal begins this way: "Why Do You Wait?" I believe I can answer that question for Mr. Advertiser. The majority of the people who venture into the thoroughbred poultry business do not have much money. Ninety per cent of them perhaps are in that class. The other 10 per cent who have the money are very "scary" about investing it. That is the reason they have the money. The people who will pay a dollar a dozen for eggs are much more plentiful than those who will pay \$3 or \$5. And the dollar people are not all in the 90 per cent class either; neither are the \$5 people all in the 10 per cent class. There is as much difference in people as there is in chickens. There are some of both who do not know enough to go in when it rains.

About how much ought an egg guarantee to be worth? I received a letter today from a man who sent me \$3 for a setting of eggs a month ago. Here is a part of his letter: "I got but seven chicks, two weak, both of which died, leaving me but five. Then my little boy dropped a board on one and killed it, and a sudden shower caught the hen away from her coop and drowned another, so I have but three left. Now if you care to help me out any," etc., etc. No, I don't care to. However, I offered him another setting for \$1, just one-third price. By the time a rat gets one of his chicks and a cat another he will only have one, which reminds me of the "ten little Indians swinging on the gate." Hereafter I shall make my prices a little lower and guarantee—nothing.

One of the writers on Rhode Island Reds in the June American Poultry Journal says: "It is nothing unusual to have a Rhode Island Red hen lay while caring for her chicks."

Well, what of it? My Cochins do that every year, and have for years. But I had one this year to begin laying in the coop with her chicks when they were only two weeks old. No Rhode Island nor any other kind of a hen ever beat that.

Another writer on the same breed says: "Rhode Island pullets, if properly grown, should begin to lay at four and one-half months. I have heard this said of other breeds, but it has not been my luck to discover them." No, nor mine either, and I do not believe the Rhode Island Reds will do it. I have a friend in my home town who has been buying Polish eggs of me to set, and he is using his Rhode Islands to set them under, because he says "they want to set all the time." Two exhibitors of Rhode Island Reds at Bloomington told me they were going to give them up, for the same reason. I am not writing this to run down Rhode Island Reds, but simply to show that the Cochin is not the only variety that is a persistent setter, and that no one variety has all the good qualities and none of the drawbacks. A person who knows nothing about poultry would begin to think that there were never any chickens on earth that were any good except three or four of

the brown varieties. But then it may be because they are not "properly grown," whatever that means.

And still another writer says: "Wouldn't you select the breed that is not so fluffily feathered as to interfere with the fertility of the egg?" That takes the cake, sure. What on earth has the fertility of the egg to do with fluffy feathers? Yes, there is "a hen on earth that surpasses the Rhode Island Red as an incubator and brooder," and that is the Cochin. The Cochin has been almost kicked off the earth for that very reason, and now they want to take her one little good quality away and give it to a variety which they claim is one of the biggest layers in existence. Big layers and big setters do not exist in the same variety. Such an assertion is nonsense. The truth of the whole matter is that some people want the earth; want all of it, with a slice of the moon, the comet, tail and all; and it is a fine thing that they cannot make everybody go their way. To settle the matter I should like to ask a question for some of the breeders of general purpose fowl to answer. Here it is: Which is the best general purpose fowl, Plymouth Rocks, Wyandottes, Rhode Island Reds or Orpingtons? All speak up at once now, and the pages of this old journal will be swamped for the next twenty-five years.

I was considerably interested in Rev. C. E. Peterson's article on "How to Influence Sex." Some of his ideas are according to the more commonly accepted theories of the medical profession on the influences governing sex, most of which, in my opinion, are wrong. At least there is so much evidence to disprove the theories that they cannot be accepted as infallible rules. The most common one generally believed in, that the vigorous male mated to the more weakly female produces males, and vice versa, is so many times disproved in the human family that it really amounts to a refutation of the theory. I know two families where big 200-pound six-footers married to slender little women; one case resulted in eight girls, in the other five girls; no boys in either family. I know perhaps a dozen families where the husband is a little dried up specimen of humanity and the wives big, healthy looking women, and the children three-fourths or more boys. Nothing to it. Here is a rule that is not so often broken: In each alternate generation in a family one sex will predominate; e. g.; here is a family in which the children are all, or nearly all, boys. The children of these boys will be, a majority of them, girls. Not in every case is this so, of course, but in the majority of cases. Now where is your principle which influences sex in those cases? It is not a question of vigor at all; it is a question of heredity; some natural influence which nature uses to balance the sexes. I have my opinion just what this influence is, and if I could have the control of the parties "to the contract" I believe I could tell them in 90 per cent of the cases just what their progeny would be. It might be possible in the human family, where the will could be controlled, to control the principle, but in the brute creation, and especially in the promiscuous breeding of poultry, it cannot be done. Single matings alone would stand no show whatever, and "the game would not be worth the candle."

Again, the idea that debility has anything to do with it is disproved by the fact that in the same family, often, the first three or four children will be of one sex and the last three or four of the other, and that irrespective of which sex came first. My opinion is that if you had a hen, as Mr. Peterson suggests, whose chicks were all pullets, that the chicks of these pullets would be mostly cockerels, according to the idea mentioned above, of the alternation of sexes, and if this idea or principle is true it would knock out Mr. Peterson's plan of establishing a line of breeders in which one or the other sex would preponderate.

WHO'S WHO IN HENDOM

Every chicken hatched on my farm this spring while Halley's comet was in the ascendancy is going to be a prize winner. Wife says to add, in my mind. I suppose there are a lot of fellows in the same fix, mentally. But all joking over the fence: Would it not be a swell planet, that of Halley's, to mature birds in? What? You fa stayz tou nicht?

Well, let me explanation it: Halley's comet travels in its course about the sun once in seventy odd years. Spring is close to twenty years long, made to order for the hatcheries people to prolong the season for custom hatching and stave off proceedings in court as long as possible. Incidentally, the guy who changes males from one mating to another to try for better results gets a mating for his money during their eighteen years of beautiful spring weather. Summer is the same length of time. The A. P. A. meetings are three months long, giving the attendance plenty of chance to go home and cut the winter's wood when G. M. C. gets up to explain the artists' combination. This is nice.

The evening of each day is ten to fifteen hours long, which gives plenty of time to shut the chicks up and smoke the evening pipe of peace, and the day and night are, consequently, a hundred and forty odd hours long. This latter is for the chicken thieves, on no other plant that we know about they being thusly protected. A fellow would have a good long time to set hens in the evening of such a day as this one over a hundred and forty hours long. Of course, it would be something awful to have to sit up during such a long night watening an unarly incubator.

The show season of fairs and winter exhibitions would be a pippin on Halley's. It would drive a Leghorn man to distraction and make a S. C. Minorca fancier go for relief to the rope's end. But such a season of exhibitions would be a darling for the advertising and subscription solicitors. Wouldn't they reap a harvest with all this time at their command and such long waits between meals! Certainly a lot of class to that measuring of the silent commodity of time. But if we had to wait that length of time for Kimmey's report of the annual election, some of the candidates would go crazy.

And with these ruminations of fancierdom on Halley's, let us let the poor comet rest, if such a thing is possible, in its terrific flight.

I might mention in this department this issue that there are a lot of us who would like some word from Joe Hildorfer. He was a Black Minorca king for a long time. At least, he was a near-king or a prince. Joe used to be one of us and always named with the bunch, but he has become as retiring as Tom McGrew, Jack Johnson and Abdul Hamid. When Joe was with us out on the pike at St. Luoeys and down along the beautiful aisles of S. C. B. Ms. in those famous live stock barns he showed himself to be one of the real stars of the fancy when it came right down to every day mixing with the crowd.

Joe is big and roomy and comfortable. A little man in his clothes would look like a small burg dropped down in front of the Montgomery Ward tower—all shriveled up and gone to seed. When you sit down to have a visit with him you are talking to a man who is a good listener and who intersperses the conversation with a deal of wit and pleasant remark. I liked Joe and would like him still more if he would come out into this corn belt country with a few more of his good birds.

In some Sunday paper or other every year, Mrs. Della C. Johnson breaks out as the poultry queen of the wide, wide world. Her press agent is a regular idea rustler right from the Montana range. He always gets away with the goods. Mrs. Johnson does hatch and raise a lot of chicks every year. A few years ago we met her at the Iowa state fair where she told us of some of the things she was doing with a flock of several thousand Brown Leghorns. She operates more incubators than any woman poultry grower in the world.

One of the best hatches she brought off this season consisted

of nearly 2,500 chicks. This is going some, as Ole said in narrating his adventures with a cyclone. I should say it was. There are a good many men who do not hatch this many chicks in a life time, yet they claim to be fanciers of the real dyed-in-the-wool sort. They are simply has-wazzers or never-wazzers-at-all when compared to what Mrs. Johnson is doing. She raised a mortgage of about \$14,000 from the farm left her by her husband, and the hens have had an egg or two in this doings. Iowa claims her as a native woman, and the chickenists of that state all point with pride to her work.

If there is a more retiring man in the whole chicken world than Earl Roberts, who is known as E. G. Roberts to all his advertisement

readers, we do not know where to find him. Yet we are going to drag him out and tell a few things on him just the same. Earl is one of the youngest looking grandfathers in seven states. You would not think it of him at all. He has made health and enough of the wealth of this world to last him for some time. If I were he and had preserved my young looks as well while working with the hens I would now be offering a book to the dear readers of these lines on "How to Be Healthy Among the Hens."

He could write a very acceptable volume on some such title as, "How to Be Happy Though a Fancier," but he is not of that morose turn of mind. He was impressed with the fame and fortune in the poultry business from a little excursion to the insane asylum. Now please do not take it that he was ever confined in one—you might have to bring it back. He never was. But once, so the fairy tale goes, he went out to satisfy his curiosity and seeing a man who was perfectly rational working about the asylum, he asked one of the keepers what that fellow was confined for. The keeper told him to wait a few moments, or until a hen laid an egg and then he would see. He did. In a few moments a hen began cackling as though her heart would break. She had laid a double-yolked egg. The patient Earl was watching dropped his tools and ran away and hid under a porch of the main building. "What in the world is the matter with him?" asked the subject of this short sketch. "The poor man does that every time he hears a chicken," replied the keeper, "for he imagines he is a kernel of corn and does not want to be the cannibalee."

This set Earl to thinking. He thought that if a chicken could do this for a man with only a fraction of a mind, how much could a thousand hens do for a man with a good mind. That was the all absorbing topic that surged through his gray matter. Then, after he had duly looked into the thing and resolved to do his best, he entered the chicken business and has been one of us ever since. He was breeding and showing chickens and had the reputation of being the best showman in America long before I was out of my fancier kilties. Indeed, I was in diapers when I first saw his name in the poultry prints. But I enjoy having him as a poultry contemporary and am glad to record a few of the things he has done among the chickens so that our descendants will not be shrouded in dank and dark when they search the archives for material about the fanciers and poultrymen of this age. The Roman guy who recorded the first we have in history about Her Royal Henship cannot even now, after the epistles of my friend Peterson, be called to name by half the breeders who claim to know that it is impossible to get a setting of peacock's eggs. This is not as it should be.

Well, we have not the time to go into detail about the career of this man Roberts, and though the subject is worthy of it, we hear the call of the brooder chicks and the dong of the supper bell. Suffice it to say that Roberts is one of the best showmen because he is one of the best judges and breeds the birds he shows. He shows for the premiums he gets out of it, and the specialist never met a cleaner foe or one worthier of his skill. I have heard men who were breeders of Polish fowls, Leghorns, Wyandottes and Rocks say that Roberts was as well posted, and a blame sight better, than a

FIRST PRIZE EXHIBITION PEN AT MADISON SQUARE GARDEN POULTRY SHOW, NEW YORK, DEC. 27-1909-JAN. 1910
BRED AND OWNED BY MONMOUTH POULTRY FARMS, J. C. PUNDERFORD, FRENEAU, N.J., U.S.A.

F. B. Swell

lot of folks, as any specialty breeder they ever knew. And there is a lot in this. Earl shows birds or prepares them for showing from one year's end to the other. He handles his breeding birds with a view to showing them after their season is over, and it is such excellent care and attention that he gives which makes him the thousands upon thousands of times a winner that he is.

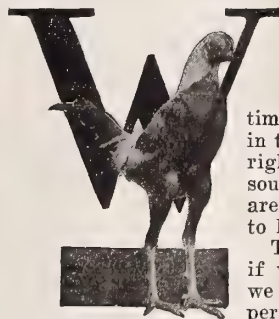

Here is one of the funny things about the buyer of pure bred poultry who knows the value of good stock: A dairyman will pay from one hundred to five hundred dollars for a bull of his choice and never turn a hair; a horse farmer will pay a thousand dollars for a stallion, or half as much for a good mare, and be ashamed that he was not in position to buy a better one; a fancier of good swine will pay a hundred dollars for a boar pig, and think he has a bargain, but never one of them would loosen up to the tune of a fifty dollar note for a good pen of five to ten breeding birds of any pure bred kind. The lowly hen gets it in the neck from all sections and classes. This is not as it should be. On the same farm with the finely bred stock of other kinds she will be forced to roost out where the coyotes can make her wishbone shiver as they deliver a serenade a la obligato just beneath the apex of the machine

Justice to sit there idle, blindfolded, and allow these awful things to be forced down the crop of our home building biddy? Well, not in a hundred moons and then some. Let us enter the game of spreading the good hen gospel with a determination that we will throw light into the remotest corners of present chicken darkness. To say that the hen is a greater bird than the eagle to place upon one side of the American dollar, with Diana on the other, is but showing the crassest ignorance, for has not her image been graven upon the hearts of the whole world as one of its greatest benefactors and philanthropists? The hen is here, the time is now, and we are, or should be, servants in the cause that will lead to her uplifting and still further profitable career.

She has educated those of the country's sons who have sought out her dainty eggs from the hay shed and the straw stack, lifted her chicks from off the limbs of the old apple tree in the dark of night and cast them then into a miserable box to be carried to the man who gave us a paper good for money at the bank. She has nursed us through our convalescences carefully and surely with the sustenance of her meaty and nutritious eggs, when the farm was mortgaged and the live stock dropped dead from its continued diet of grasshoppers during the years we all so well remember; then it was he who came to our thoughts in the late hours of night as we laid there on our anything but downy pillows and planned to stave off the sheriff's sale. She even supplied the feathers for the pillow.

Yet, notwithstanding the knowledge we have of her, we have treated her like we would the human wart on the shoulders of society. Shame, shame, this and more be upon our heads. At the end of our days we will remember the grave injustices we have heaped upon her and then our souls will writhe in agony for the default, and our sins will come trooping down upon our imaginations and the brain will stagger into that state from which it becomes more blank than at any time of existence. Let us drink to the health of this friend of humanity and then trust that she in her goodness will have mercy on our thoughtless heads.

RHODE ISLAND REDS AS EGG PRODUCERS

WHEN I first became interested in Rhode Island Reds, it was because an old friend told me that they were the best layers (away up in Minnesota), in the winter time of any birds which had been kept in that climate, and that they also layed right along the year through. This sounded pretty good to me, and as they are good size for table use, I decided to keep a few.

This was in 1904, and we decided that if we were to breed these birds at all we would do so with the purpose of perpetuating the qualities which had made them of value, i. e., egg production and table use. I at once obtained the Potter system of selecting fowls, as well as the Hogan system, and when selecting our birds for the coming season, the examination for egg production is the first thing which is given consideration in our flocks.

As I have frequently stated, I consider the egg producing qualities of the "Reds" of more importance than all other considerations. I admire beautiful, even-colored birds, and am always glad to have a color standard to breed to, but I do not wish to see the color craze ruin the breed.

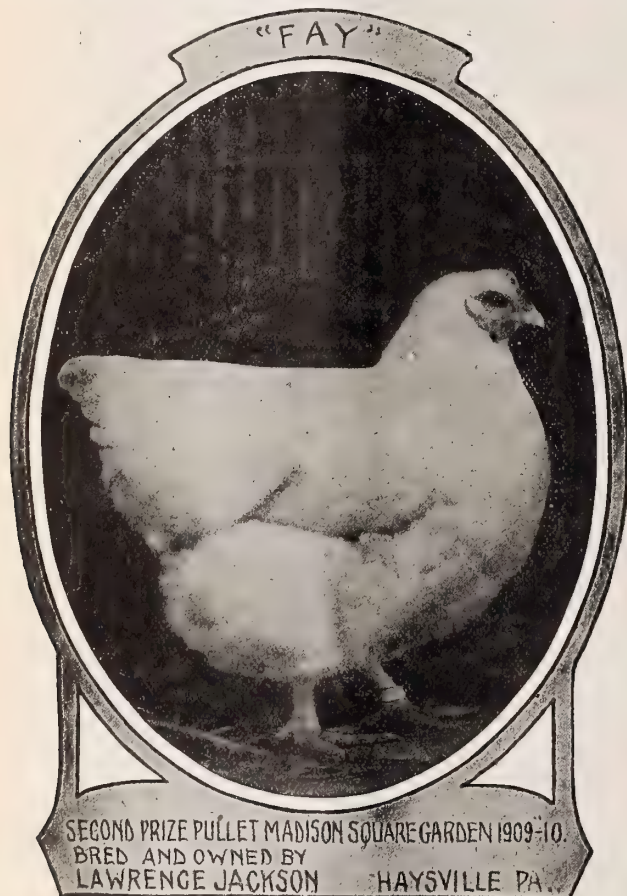

We have always culled our birds closely, and after having selected them with the view to laying, which means shape and physical construction, we then select for color, and those familiar with our birds and our winnings say that we have succeeded well in color as well as eggs.

In the year of 1909 we trap nested ten pens, with an average egg production of a trifle better than 185.

We have, of course, individuals with much higher scores, and many letters from our customers showing individual cases of egg production as high as 250 odd eggs.

It is our observation, that the best laying hens fade most. In conversation with the late Dr. Aldrich, of Fall River, Mass., in the fall of 1907, he referred to this fact, and said that he feared that the desire for color would be the stumbling block of the Red breeders; that in order to produce color, they were, many of them, inbreeding to such an extent as to have reduced size, and produced some very weak, spindling stock.

Rhode Island Reds should be full of life and vigor, ambitious and hustling from morning to night, not standing around "knock-kneed" looking as if they had lost their best friend, but up and coming, singing and crowing, making folks "sit up and take notice."

shed or hog house. If she gets a place to deposit her daily egg she has to make it for herself. She has to run the gamut of the elm-peeler and the razor-back, the suck-egg dog and the kine of the yard to scrape enough together in the way of food to hold the feathers on her skin. In rearing her brood she has to fight the rattlesnake, turkey gobbler, and varmints galore, yet she turns over to the most of the families who cultivate her acquaintance the wherewithal to cover Nature's scant protection from the weather, the lining for the inwards, the coppers for the Sunday contribution box and the flowers with which the last summer's hat is redecorated for the present season's prevailing loveliness in feminine headwear. We all know these things are true, and more. We might go ahead and sing her praises for ever and ever, yet we could not thusly atone for the unrighteous treatment we have accorded her ever since Cæsar by setting at ease the Roman farmer without the city's wall, gave the first great impetus to the cultivation of the feathered tribe.

It is high time we all went about the righting of the great wrongs that we have perpetrated on Her Royal Henship. Like the knights of old we must enter the lists of the crusaders and spread the knowledge that will mean more and more of the many improvements that she should have as her just due. Is

This color proposition seems to have become so thoroughly inoculated into the blood of some of our judges (or at least of some of those who hold licenses for the purpose of judging) that at one of our state fairs last fall I saw the first prize on a cockerel awarded to a bird with both legs coming out of one hole, and to a pullet, short and dumpy, with no length of body or back, carrying her tail up in the air, full of beautiful "curves" and no angles, in fact not a thing on earth to indicate that either of these birds were Rhode Island Reds, excepting "color." I asked the judge why he placed the awards on these two particular specimens, and his reply was, "Look at the color."

As before stated, the "utility" quality of the "Red" is of utmost importance, and for this reason in judging fowls those points which indicate these conditions should be considered of first importance, i. e., size and type.

The "true shape" of a Red is so pronounced that one should be able to distinguish a "Rhode Island Red" from other birds, even though he were "color blind."

Since first brought generally to public notice no breed of fowls has ever attained popularity so fast, as attested by the constantly increasing number of entries at all of our leading poultry shows, as have the "Rhode Island Reds."

I believe that within a short time there will be more "Rhode Island Reds" raised in America than of all other breeds combined, but this must be accomplished by keeping them up to the present standard as "utility" fowls, as well as beautifying them by breeding as nearly as possible to the color standard.

In conclusion I wish to say that I believe that the chicken business is like all other lines of mercantile business, that it can only be built to large proportions by absolute integrity, making no statements either in our advertisements or otherwise which the absolute facts will not prove to be true; by allowing only such judges to be employed to place the awards as know what a "Rhode Island Red" should be, and who are honest and honorable in their decisions, and place the awards according to merits of the birds. Yours most truly,

South Bend, Ind.

Irving A. Sibley.

BREEDING REDS FOR BEST RESULTS

NO breed in existence has made such rapid advances in the face of strong opposition as the Rhode Island Red. They have now an exhibition and commercial breed. Such attained an enviable reputation, both as progress has been made in breeding that, on the face of it, it hardly seems necessary to say anything in regard to the proper method of mating, but because of the large number of new breeders that are taking them up, and because of the many groundless assertions that they will not breed true, a few remarks along this line will probably be acceptable to some.

Let us start with the selection of birds from which we expect to produce exhibition specimens. We will choose our male first. In selecting the male first consideration should be given to color, as he influences the color of the offspring more than size or shape. See that he is of an even shade of color as possible, showing little or no contrast between hackle and back or saddle and back. Examine the undercolor, especially of the back, saddle and hackle, and if it shows white or smut discard him. Now look to his black markings and see that they are strong. The eye should receive due consideration. This should be red in color and bright and snappy in appearance. Never under any condition breed from a bird, male or female, that has a "wall" or "fish" eye. The comb, whether rose or single, should not be too large. If you have several males that come up to these requirements then select the one having the best size and shape. In order to determine the true shape of a cockerel it is best to put him in a pen with a few females for a couple of days, as the under male in a flock will never carry himself to advantage. Do not think from this that no attention whatever should be paid to the shape and size of the male, but the idea is to not discard a rich colored bird because he does not measure entirely up to standard in shape and size.

Having selected the head of the pen we now turn our attention to the females. Do not attempt to secure too many to go with your best male bird, as there are probably a half dozen pullets in every flock that are better than any other six in the same yards. As we looked to the male for color so we must look to the female for shape and size, as in these respects they have the most influence on their progeny.

Select the females that show the best shape and size. Keep to the long backs and low tails. See that they show a good length of leg, not lanky, of course, but see that they stand up

well and are built for good active business. Now the color must be examined, and not only should they be of a good even surface and strong undercolor, but the color should harmonize with that of the male that is to head them, as little can be gained by mating extremes of color. Discard those that show white in surface or undercolor, but are otherwise good pullets should not be thrown out because she shows a slight shade of slate in undercolor, especially if male is good in undercolor. The ticking in hackle of female should be examined, as ticking so heavy as to resemble lacing is undesirable and entire absence of ticking is also bad. The black sections, eye, head and color of legs are also important when it comes to the final selection.

Beware of the hen which showed weak color as pullet, but moulted out strong as a hen. If used at all let it be with caution, as they seldom make good breeders. To sum the matter up, breed as close as possible to the standard in shape and we have an ideal utility bird. After having secured the proper shape breed the best color possible and we have an ideal utility and exhibition bird.

One of the main troubles is that too many are breeding from light colored or buff birds.

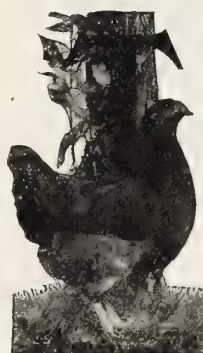

Shape is a very hard problem for the amateur, as the eye must be trained for this. Therefore it is better to start with one breed and thereby save confusion.

Keeping a record of different matings by marking the eggs and toe punching the chicks. Keep the young stock growing and avoid overcrowding, as sweating caused by crowding will work untold harm to the color of the chick just coming into feather. Breeders are very often blamed for sending out eggs from poor stock when the fault really lays with the purchaser in not taking proper care of the chicks after they are hatched.

Schenectady, N. Y.

W. W. Gruepe.

"OPEN AIR" METHOD OF KEEPING POULTRY

THE remark was made in the April number of the American Poultry Journal that it would be interesting to know how the open-air method of poultry keeping worked out in the "colder" states. Now, though New Jersey is not considered to be one of the "cold" states, I am constrained to give your readers a brief review of a year's experience with this method. Bear in mind that I am a rank outsider in the poultry business. The year just ended gave me my first experience with poultry keeping by any method. Early in April, 1909, I bought 30 day-old chicks—Single Comb Buff Orpingtons. Into an ordinary packing case about 30x36x18 inches I put an inch of clean sand, and covered that to a like depth with cut clover. A soap box with two inches of cut clover in the bottom and cotton batting blankets for cover was placed in one end of the packing case and formed a splendid brooder. The little fellows quickly adapted themselves to their quarters, and after the first day gave no trouble about the brooder—they knew perfectly well what it was there for.

Here, supplied with wheat bran, grits, charcoal, water, and scratch feed in the litter, the chicks grew amazingly and soon became the admiration of all who saw them. The first week the head of the house every two hours during the day fed the chicks bread crumbs moistened with milk. In this way, without losing a bird, we reared the flock to maturity. At six months cockerels weighed eight pounds without special feeding. The pullets were beauties, every one.

The "cold storage" method of raising chickens was so successful, why not follow out the idea and see how it worked out in the production of eggs during the winter?

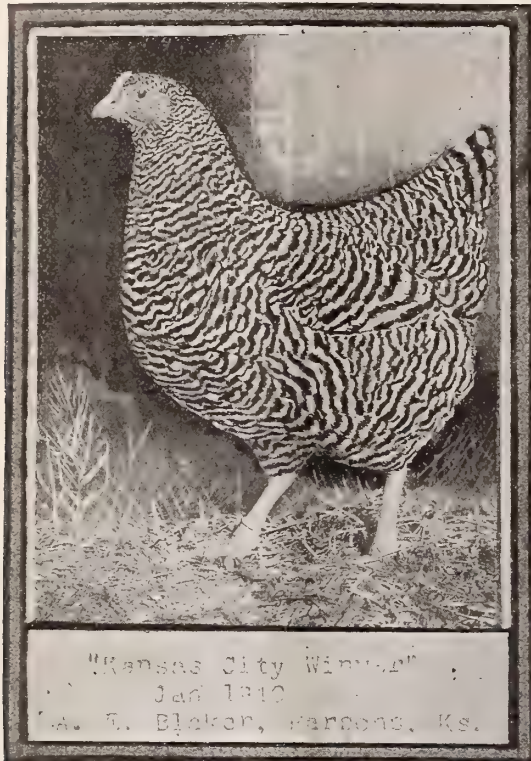

For winter quarters a piano box and a Philo coop were placed end to end. Over them a rough—very rough—frame was built. The roof was formed of narrow boards one foot apart. On these was laid two-inch mesh wire netting, the whole covered with two-ply tar paper. Tar paper tacked to the framework formed the ends. The dimensions of the shed are about 10x14 feet. The front, seven feet high, faced south-west, and was covered with a movable curtain to keep out the rain or snow. In front of all was an unprotected run 12x13 feet. Under the shed I kept from six to ten inches of dry straw.

Thus "housed," 23 birds—15 pullets, six hens and two cocks—hustled for a living all winter. The roosting places, of course, were warm, perfectly dry and free from drafts.

The winter of 1909-10 was unusually severe for this section. Heavy snowfalls were frequent. Zero temperature and 6 degrees below were recorded several times. Yet the hens continued vigorous and healthy. Not a frosted comb showed all

winter. The severely cold weather affected the egg production very little.

A report from the Maine Experiment Station shows that hens kept in this way are healthier, hardier and lay better than hens kept in the common way, but that in temperatures of 20 degrees to 40 degrees below zero the egg production decreased about 25 per cent (I think). Long continued severe cold no

doubt would have that result. With us our hens continued laying as regularly in zero weather as at other times.

As stated above, I began the winter with 21 hens—15 pullets laying. Along in February I lost two pullets through overfeeding; killed two old hens, too fat to lay, had a hen setting during the last two weeks in April—and from January 1 to April 31 got 1,021 eggs.

For an amateur poultry man isn't that "going some?"

I am well satisfied with the results of this experiment. Shall enlarge my "coop" this year and make certain modifications looking to greater convenience in caring for the stock, but shall adhere to the curtain front house. The dimensions will be about as follows: Rear wall, 4 feet high; depth of coop, 12 feet; length, whatever may be necessary—believe 6 feet for every 60 birds will be ample.

T. H. Blakeny.

Elizabeth, N. J.

ARE CHICKENS A BOTHER?

PEOPLE who are asked this question will answer yes, nine times out of ten. Ask them if they keep chickens, and if they answer no, ask them why. They will be likely to say, "Oh, chickens are too much bother. All they do is eat, eat all day long, and they require your attention all the time if you want to make poultry a success." I greatly differ with these people. Before I go any

further I frankly admit that they are to a certain extent to the persons who do not take any interest in them. But to the persons who like them it is a pleasure. If you are a working man you leave the house in the morning and come back in the evening. When you get up in the morning give your chickens water. I advise every one who has not a fountain to get one. You can buy one for 25 cents. All you have to do is to fill the fountain and the water remains clear, fresh and cool all day. Next get a feed-hopper. You can make one yourself. The illustration below will undoubtedly give you an idea how it is to be made. It has a heavy wire lying on top of the feed, thus preventing the chickens from scratching it out of the hopper, and also making them work for all they get. When

the feed gets low the wire also drops down, thus you can see that the wire always rests on the feed. If you fill this hopper once a week it will be sufficient to keep 10 or more chickens supplied. So if you fill the fountain with water and then your hopper with feed your chickens will have enough feed and water for the whole day. Chickens are no trouble at all. Some people think it is wasteful and extravagant to feed chickens with a hopper. They say the chickens get too fat and lazy, and consequently will not lay. I have found out that by feeding chickens with a hopper I have saved considerable feed. They get just what they want to eat. In some instances when you feed them two or three times a day a good part of the grain gets lost, either by being tramped down by the chickens themselves or else the sparrows come along and eat it. You do not lose any feed if you have a hopper, for all the feed that is taken out of the hopper is eaten by the chickens themselves. If you use a hopper do not think your chickens will eat you poor. Allow me to give you an every-day illustration. For instance, if a girl works in a confectionery store she will eat a great many dainties the first few days, but after a while she gets so sick of seeing them that she eats very little, if any. The same is true with chickens. They may eat and eat the first few days, but after that they will hardly notice it, or if they do they will only eat enough to keep them in a fine condition. Do this and you will get more results from them than if you fed them the other way, and your feed will last you a good deal longer. The chickens thrive very well this way. They can eat and drink unmolested and undisturbed. In the evening when you come home all you have to do is gather in the eggs, sometimes easier said than done. But if you give your chickens good wholesome food they will lay almost all the while.

I do not give my chickens any egg tonics or egg producers. These tonics may produce more eggs, but I do not think it does the chickens any good, as it is unnatural and only forces the hen. Wholesome food, beef scraps, green bone, greens and table scraps do more for chickens than all the egg tonics ever produced. Now if you are hesitating whether or not you ought to keep chickens, I hope this article will determine you to keep them, for as I have already explained they are no trouble at all. They can be left alone throughout the whole day. If you really do want to keep chickens find out which breed is the most all-

The above is a reproduction of the first prize Buff Plymouth Rock pullet at Chicago, 1908, and is bred in pen No. 1, Dearborn Poultry Yards, Dearborn, Mich.

around one by reading what the editor, subscribers and advertisers of this paper have to say about the various breeds and find out for yourself which breed you would like to keep most. After you have done this you can either buy a pen of these chickens, some hatching eggs or young chickens from poultry dealers who advertise in this paper.

Wesley F. Lorenz.

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to A. T. H. Fortescue, Chatham, Ont., Canada, and the second prize to E. H. Bennett, East Liverpool, Ohio.

SUCCESSFUL POULTRY RAISING.

BY the way, it does not take long, after taking up poultry raising as a business, to become convinced that the work, as a whole, is only a sum of little things and in proportion to our faithfulness in performing the little daily duties or tasks will our success be.

One of the most valuable possessions in poultry culture is one's stock of good common sense. If we use this in every department of the work and let it help us to decide in matters that perplex us, we will be somewhat independent of following blindly everyone's leading. We must think and reason and know the why and wherefore before doing anything of importance. From the start let method and system prevail in the care and management of our fowls.

Deciding on the fowls' "bill of fare" is one of the little

things, yet much of one's profit depends on a wise choice of these articles of poultry diet. Such grains, green food and meat food should be selected as will make a balanced ration, one that will be conducive to bone and muscle growth, the putting on of sufficient flesh for the best condition and health of the birds, and at the same time increase their productiveness.

Regularity of feeding is a little thing to be observed, yet the fowls do much better if fed at or about a certain hour each meal time, than if their food is thrown to them at any odd time that is convenient to the owner. Seeing that the grit and shell boxes are kept full is one of the little tasks, and yet the health and good condition of the poultry depends upon it.

One of the greatest necessities for comfort, health and profitable poultry raising is pure, fresh water, and I am afraid this need is only too often neglected. The supplying of a dust box in winter will help greatly to keep down lice. Further, don't allow the droppings to accumulate.

Observation and reading are doing much to post the public on facts regarding the poultry industry, and all goes to prove it is one of the most profitable industries known and is advancing rapidly every day. Poultry culture has now the confidence of the general public, and much capital is finding its way to investment. To the man or woman who is willing to give poultry raising his earnest attention it offers the inducement of prosperity and pleasant occupation.

There are a large number of people who start into the poultry business every year, but all that number do not make a thorough success of it. A wrong start is, more than anything, the cause of some failing to make things go. There are people who think that to set up with poultry they "must" have a right up-to-date plant in order to do good business. When they learn that to properly manage a modern outfit and make it work even fairly well, one must possess the combined skill of an engineer, a chauffeur and a physician they fight shy of the business.

Some beginners will get a number of poultry supplies' catalogs and, perhaps, swallow all they read of the hundred and one different things set forth which some compilers say they "must" have. But does he need them all?—by all

Special mated pen of White Wyandottes in the yards of J. C. Fishel & Son, Hope, Ind. This is the pen that has created such a sensation the past season and from which eggs were sold at \$75.00 per setting and \$5.00 each.

means, no. It would be an easy matter to invest a hundred dollars in poultry machinery and fixtures that one can never realize a cent of profit from the investment. Then, it is not difficult to place ten dollars that it will return a profit of, perhaps, fifty per cent within six months. It depends on what one buys.

Outside of an incubator and brooder and, perhaps, a few drinking fountains, the remainder of things needed can be made by anyone who can saw wood and drive nails. A well known poultryman relates how he began with an outfit that most poultrymen would laugh at, but he stuck to it through thick and thin, adding the things he is now using—all home made things—and is making a go of it. All the money and property he now has was made raising poultry. He says it seems almost a dream, his climb from debt and poverty to independence.

Success does not lay in the outfit of tools, but in the way they are used. There are hundreds who have begun with an outfit that must have cost several hundred dollars and failed to make poultry raising pay. There are others who have been at the game quite twenty years, and they do not appear to have learned one thing. They are in the same old rut they started in. Why, how many people there are who think they are doing well if they can sell two or three dozen chickens and twenty or thirty dozen eggs a year. You know those people who think they are doing well if they can sell two or three dozen chickens and twenty or thirty dozen eggs a year. You know those people, too, who started full of enthusiasm and were rapidly getting into a paying business when they met with some bad luck, caused, probably, by bad management, and down and out they go like spent rockets. But there are others who are as steady as clocks and are making a good sum every year.

With good, healthy, pure bred stock to start with will invariably mean success if the management is likewise good. Now, here is a little story illustrating how management counts. A lady living on a rented farm made something over one hundred dollars more than her husband. He farmed and she raised poultry. His land was fertile and he had good tools. She had only such tools as she made with her own hands. She used hers with better judgment than he did his and, naturally, her success was greater.

When successfully raised and marketed, the farmer, the villager, the city poultry breeder, each and all, can and do succeed in proportion to the extent to which they invest, and put into practical operation theories and lessons learned by practical experience.

If anyone wishes to begin on a small scale, let him get a setting or two of eggs. The foundation of some of our most successful poultry farms was from a setting of eggs. There is some pleasure in the owning of a flock of beautiful pure bred birds, and it makes one more content with life, by the way.

Chatham, Ont., Can.

A. T. H. Fortescue.

CLEANLINESS FIRST, LAST AND ALL THE TIME.

"IT'S not so much the breed as the feed," I have heard many poultrymen remark, and I have thought so many times myself.

Feed and breed are a good combination when rightly worked together, but you can ruin good poultry by a bad system of feeding, and you can bring common hens to a monthly average of twenty-five eggs so sure as you can teach a mongrel dog to do everything but talk.

Some few years ago, to get a start in poultry raising, I bought some ordinary thoroughbreds, birds that would not take down any ribbons at the bench, but by a correct feed system I brought them to laying twenty-four and twenty-five eggs per month per hen. Mrs. Jones, our neighbor, who had some Jim Dandy barred rocks, would ask me every day or so, "How many eggs did you get today?" "Every hen layed today," I was able to answer a good many times. "How many did you get?" I would ask. "Only three," she would say, or, "Only four: isn't that awful for fourteen hens?"

This continued for some time on Jones' side of the fence until one day Mrs. Jones said to me, "I guess I will have my husband kill our chickens off, for they are nothing but a lot of trouble, anyway." I was about to utter a few words of encouragement, advice, or whatever I could think of, but something told me to wait awhile, and I did.

From that on I began to look over the fence a good bit and size up conditions around Jones'. The ground in the chicken run was so hard it looked like a rock, and no hen

would attempt to scratch it. Six old kettles (used at one time for drinking water), five of which had been upset and dirtied by the chickens and the other with an inch or two of filthy water that actually stunk.

For some reason or other I still held by peace. That is, until one day at feeding time I had just given my flock their supper when our neighbor's door opened and Mrs. Jones came out with a pan of potato skins, egg shells, coffee grounds and goodness knows what else, and giving it a toss into the air yelled Ch-o-o-key, and back into the house she pranced.

By the powers that be! If I couldn't treat a horse-fly better than that I would want to be horsewhipped. Anyway, I fed two flocks of chickens that evening instead of one, and the next morning I proceeded to start Mrs. Jones on the right track.

The ground in the run was dug up with a pick, then and every week afterward, grass and other green foods given, clean grains and grit were fed in hoppers besides mash feed and dry bran. Even the dirty old kettles went to the dump and were replaced by a new galvanized fountain.

It was not long before Mrs. Jones smiled whenever she

PRIZE WINNING WHITE PLYMOUTH ROCK.

looked at me, and I could tell that her egg supply was going up like a thermometer in July.

I don't mean to make this story funny. It is true and sad. And I hope a great many readers of it will profit by Mrs. Jones' experience. She did, and I hold her esteem to this day.

Cleanliness is at the bottom of the whole shooting match. A hen is a natural producer, but she must have clean feed and clean quarters if she does her best. She is not much of a housekeeper herself, but she cannot resist bad housekeeping very long. She will always appreciate what you do for her. Treat your horse well and some day he may kick you. Treat your cow well and some day she may hook you. Treat your dog well and some day he may bite you. Treat your hen well and see what happens. Laws! How she will sing, and scratch, and lay, and pay, and some day you may reward her with a sharp hatchet and a pot.

So, Mr. Poultry keeper, large or small, bear in mind that it is cleanliness first, last and all the time if you want results. No matter what the breed, it depends on the care you give it. It is up to you.

East Liverpool, Ohio.

E. H. Bennett.

"WHITE CHOLERA"

O many people, talking about their little chicks dying. One lady tells me she lost 200 little chicks last year, all from the great chicken plague, the "white cholera." Worst of all, they say there is no cure for it. Possibly that is true in a few cases, but if there is no cure there is at least a cause. Let us get busy and look for it. Chicks hatched well, seem strong for a few days, possibly a week or two; then they do not eat just right; do not seem to relish their food; seem hungry but eat very little. They are cold, will sit and shiver and tremble in the hot sun. They have such

a pitiful cry, as though in pain; seem sleepy, but when you call them they are very active for a few minutes, then go off and huddle up in a corner and shiver and sleep. The droppings are white. In a few days you have scarcely a chick left to remind you of your trouble, and if a few do manage in some way to live through the siege they are stunted for some length of time and will scarcely compare with a good, healthy chick that has avoided the storm of "white cholera."

Surely there is some great cause for this trouble, and let us get to the bottom of it and eradicate it. A noted physician has said an ounce of prevention is worth tons of cure. It surely is in this case.

Did you ever stop to think what cholera is? A severe case of bowel trouble. In old chickens you notice the comb becomes pale, the mouth white and hot, chicken seems weak and droopy,

some fever, cold feet, droppings at first white, then the deadly yellow and green. That color shows you at once that the liver is affected. In the beginning it is simply a case of indigestion. Treat the case at the very start as you would a child if you would have a cure. As soon as I discover an old chicken with the least indication of white cholera I place her in a warm, comfortable coop, after having forced her to swallow several large pills made of bread crumbs and venetian red, moistened just enough to make it stick together. Then leave in coop for twenty-four hours without any other food and no water. By the end of that time the chicken is usually hungry and will eat of her own accord. I then give her water and a dish of dry bran well sprinkled with venetian red; all she will eat, and also supply grit. In a few days the chicken is singing and ready to be placed in the flock again.

In the case of baby chicks, in the first place be careful of their feed. A great deal of indigestion in chicks originates by feeding too soon. They should at least be forty-eight hours old before any feed is given at all, and then just a light feed. It is better not to feed all they will eat and leave them a little hungry. Notice their crops in the morning to see if still filled. If so, be careful, there is danger ahead. Wait until they get real hungry, then give them a dainty breakfast of bread soaked in sweet milk, squeeze dry, then sprinkle with venetian red until well colored. If the case is serious repeat the dose at the next feed, then give dry feed and something easily digested. Give a dose of venetian red frequently to prevent indigestion. Some charcoal in their feed occasionally is also a good preventive, and you will soon find the "white cholera" has gone to hunt your neighbors' chicken yard. Save the fine bits of oyster shell that the old chickens have left in their dish and mix some in the feed for the youngsters and it will surprise you how soon they learn to look for it.

Millersburg, O.

[Miss] Edith G. Low.

Exhibit of the Lakewood Farms, Lakewood, N. J., at the late Madison Square Garden show. This was, without question, the finest display ever made at a poultry show in this country, and the Lakewood people are to be complimented on their energy and enterprise.

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

Were You Enumerated?

The above is the caption of an article appearing in the June issue of the American Poultry World, and by request of the managing editor, Mr. Prince T. Woods, we are going to co-operate with them in an endeavor to secure a more accurate census of the poultry in the United States, and ask our readers to answer the following questions as accurately as possible and send their replies at once to the American Poultry Journal, Chicago, Ill.:

How many chickens over three months old did you have April 15, 1910?

What was the value of same?

How many turkeys over three months old did you have April 15, 1910?

What was the value of same?

How many ducks over three months old did you have April 15, 1910?

What was the value of same?

How many geese over three months old did you have April 15, 1910?

What was the value of same?

How many guinea fowls over three months old did you have April 15, 1910?

What was the value of same?

How many pigeons over three months old did you have April 15, 1910?

What was the total value of same?

How many fowls, all kinds, were raised on your plant in 1909? (The number should include all fowls, young and old stock, whether sold consumed or on hand.)

What was the total value of same?

How many fowls, of all kinds (this includes young and old stock) were sold during 1909?

What was the total amount received for all poultry sold in 1909?

Give the total number of eggs produced during 1909, in dozens.

What was the value of same?

Give the total number of eggs sold in 1909, in dozens.

What was the total amount received for all eggs sold in 1909?

It is a well-known fact that the sta-

It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

tistics on poultry, as compiled by the government are far from correct, and the object in asking our readers to answer the above questions is to secure accurate data on the poultry business to place before the proper officials, so that the poultry industry will receive the credit to which it is entitled.

The Proposed Amendments

It appears to some of the members of the American Poultry Association that there are too many free trips to the annual meeting and that some curtailment is necessary. It has remained for the friends of the association who have not been so vociferous about what they have done for the association to have discovered this, or at least raised a hand to curtail the extravagance. Indeed, those who have had most to do with the affairs of the association and keeping themselves in office do not appear to have seen the remedy. If the proposed amendments which have the curtailment of expenses in view would be put up to the members for a mail vote, they would undoubtedly go through and become a part of the by-laws and the constitution.

An amendment is proposed which has for its object the submitting of amendments to the members with the regular ballot used for the annual elections. This will, if passed, take away from the would-be-one-man-control all power of passing or tabling any legislation which he chooses to so handle if his necessary constituency was on hand to help him vote it through at a poorly attended meeting. There are a lot of things done at an annual meeting which do not meet the approval of the members who are the backbone of the organization, and this thing of amending the constitution is something that all are interested in, and yet we cannot all be at the annual meetings nor have the representation which is our right on hand to vote our wishes.

We are not perfectly in sympathy

with the idea of having an organizer appointed to extend the membership, thinking that the branches will take care of this as they go forward with the work. If there is any commission due anyone for the new member, it should be the branch. We have as yet failed to attend a state show located in the territory of any branch where there were not plenty of branch members working to increase the membership. A solicitor would probably claim all the members taken in, and this might make trouble in many instances.

The Duck Muddle

As is generally the case where a man tries to make a descriptive standard for a bird he knows nothing about, the Indian Runner duck proposed standard is not what the real breeders of the country would have it. It is high time for the Indian Runner Club to select its representative and make sure he will be at the annual meeting of the A. P. A., ready and able to state the demands of the club and breeders who have the welfare of the breed at heart. Only by concerted action can the good be done. Better get together, breeders, and decide on the course you will follow.

Secret of Success

Are you forcing your chicks for all they are worth?

Have you provided them with plenty of shade and fresh water; are their coops large enough and the number in each coop small enough so they don't sweat at night? Examine them some morning about 4 o'clock and see.

Get them roosting on boards 4 inches wide as soon as possible. Keep the coops clean and free from lice.

If you don't do this, don't feel sore when you lose first to the other fellow who did. Remember, it only takes one good bird to win first, and is the big,

husky fellow who has always been healthy and grew from the start that has brought out the shape that was bred in it, and grew a coat of feathers with the richest color and sheen to them. Remember, the lousy, stunted or sickly birds never do this.

Therefore, I say to you, study well the conditions under which you are raising your chicks. Give them every chance to do well, and remember, a few good ones are better than hundreds of puny ones.

Here is the secret of success.

Poultry at Cornell University

On April 1 fifty acres of land was turned over by Cornell University to the New York State College of Agriculture for the exclusive use of the department of poultry husbandry. The department is now developing this farm for the rearing of chickens and growing of crops and providing quarters for the breeding stock. The New York State College of Agriculture at Cornell University is endeavoring to assist the poultrymen of the state, by conducting experiments with poultry; by correspondence; by special instruction in regular and winter courses; by showing visitors the poultry department; by personal assistance in selecting breeding pens; by poultry reading course lessons; by educational exhibits at the fairs and poultry shows; by lectures and demonstrations at poultry association meetings and poultry shows; by lessons in poultry husbandry for rural schools; by co-operative experiments with poultry. Write for bulletins to James E. Rice, Ithaca, N. Y.

Another Record-Breaking Sale

On the 2d of June we received a telegram from Mr. Ernest Kellerstrass, Kansas City, Mo., informing us that he had that day sold to Mr. Edwin A. Lemp, St. Louis, Mo., a pen of five birds for twelve hundred and fifty dollars (\$1,250), which, to the best of our knowledge, is the highest priced pen ever sold outside of the Paderewski pen which brought \$7,500. By persistent effort, good judgment and the use of liberal advertising space, Mr. Kellerstrass has brought his name and his

Farmer John: Why, Martha, yew don't mean yew got 13 chicks out of those 15 White Orpington eggs we got of F. D. Sutton? Wall, now, dew tell, and those eggs shipped all the way from Youngstown, Ohio, too. Yes, they do look fine, all one color and so strong and healthy looking. So you want me to make you a good coop so they won't get wet. Wall, guess I'll have to, for they sure cost a heap, \$1.20 each, figuring express and all. Yes, it's jes as you say, if you want the best pure breed stock it comes high, on the start. Say, Martha, I wonder if any of them chicks could win a prize at the Posey Co. Fair? Say we try and raise 'em like it say in that ere American Poultry Journal and see. All right, then, I'll make a good coop yet today.

(Continued next month.)

Crystal White Orpingtons so prominently before the people of this country as to make sales like the above possible, and has created a demand for his stock that is impossible for him to supply, he being compelled during the past spring to return thousands of dollars to customers because he did not have the stock and eggs with which to supply their wants. The same results may be accomplished with other varieties if the breeder will but follow in the footsteps of Mr. Kellerstrass.

Proposed Improvements For A. P. A.

We have a letter from Mr. T. E. Quisenberry in which he encloses a long article in which he offers some food for thought. Mr. Quisenberry cites in

some fourteen chapters, each calling attention to some new object which the A. P. A. should strive to accomplish for the benefit of the poultry industry in general and its members in particular.

We will publish Mr. Quisenberry's communication in our August issue. Be sure to read it, then come to St. Louis and put some of these good things through and then stand behind them and see they are carried out. In other words, come on and "be a booster."

Notes of the Month

One of the staff of the Poultry Culture is working hard to get Colorado chartered as a state branch of the A. P. A. We hope it goes through, as the

YOUNG'S STRAIN S. C. W. LEGHORNS

I HAVE NO OTHER BREEDS. It is acknowledged the world over as the greatest laying and exhibition strain. Eggs at half price from now on.

D. W. Young : Box 1-A : Monroe, New York

Big Bargains in Reliable Breeders

The breeding season of 1910 is about at an end and we find we have by far the best lot of absolutely reliable line-bred breeding birds we ever had or expected to have. The birds of mediocre class have long since been disposed of and all we have left are the very best specimens of our last two years of breeding. These we offer way below their actual value as breeders merely. All are line-bred for so many years back that they can not fail to produce the A1 exhibition quality that wins at AMERICA'S LEADING SHOWS. The list includes many of our MADISON SQUARE GARDEN, NEW YORK, WINNERS, of which we have a far greater supply than any of our competitors. WRITE FOR PARTICULARS of this greatest sale of

BRIGHT'S BARRED PLY. ROCKS BROWN LEGHORNS...

William Ellery Bright, Proprietor
A. C. Smith, Superintendent

Box 410, Waltham, Massachusetts

sooner every state is a branch and represented in the affairs of the association, that soon will we get down to a general control of the affairs rather than have control by one man or small clique of men.

* * *

Fanciers of Partridge Plymouth Rocks are all elated over the showing their favorites are making in an egg-laying contest in New York. They are way ahead of all competitors now and it looks as though they will stay there. All breeders who have the good of the breed at heart are working to get them admitted to the standard at this summer's meeting of the A. P. A. at St. Louey. If you are not sure that you can help any and yet you want to, ask Secretary Noftzger, North Manchester, Ind., what you should do to boost.

* * *

Louis Paul Graham, one of the fore-

of this as yet, but if it is true, we welcome the newcomer to the fold.

* * *

Some of those amendments offered are going to be adopted, especially that one which means a cutting down of the expenses paid to two sets of officers who go to the annual meeting. Some sense to that idea.

* * *

This spring has certainly been one of poor hatches. In some quarters they have been the result of dry weather, in others of too wet weather, and all sorts of reasons have been given. Well, those of us who tried to satisfy all our trade this spring have had many a sleepless night.

* * *

Uncle John is going to provide for the safety of the poultry public when he proposes to have a committee investigate the merits of all the systems and secrets and books.

Single Comb Buff Orpington cock, weight 11 pounds, never exhibited. A grand breeder of cockerels. Bred and owned by Will H. Schadt, Goshen, Ind.

most poultry artists in America, who was assigned some work for the new Standard at the last Niagara Falls meeting and who later had this taken away from him by an influence that as yet has not been properly explained, is now located in New York City and doing nicely. He is one of the artists who have promise of a long life before them and from whom we will hear more one of these days.

* * *

The Poultry Advocate is boasting of some new presses and a new managing editor. Mr. C. W. Whitney is the gentleman referred to.

* * *

"They" tell us that Joe Coleman is the new editor of Commercial Poultry. We have seen no official confirmation

Reese Hicks wants to break into the limelight again by championing examinations for judges. He will never come out of this with a victory. The merit of a poultry judge will ever be decided by the man who shows a bird under a judge. The license of popular opinion is the license that counts.

* * *

We predict that members will get their Standards for just about cost. Good move and a popular one.

* * *

If the A. P. A. dipped into everything that folks thought it ought to, we would see a great scattering of limpid results. Let us take up one thing at a time and do it well and then decide with a degree of deliberation just what we will take up to reform next.

Columbian and Rose Comb Barred Rocks are seeking admission to the Standard, as are the Pit games under the title of Thoroughbred games.

* * *

That is a good point: When a fellow says he will not join the A. P. A. he gives, four times in five, as a reason that he does not like the monkey business and bickering that is constantly going on.

* * *

Here is one of the secrets that Gleanings in Bee Culture has bought and gives to its readers. What do chicken folks think of it and who will try it this coming winter and report to us? This formula for an egg food is supposed to make the hens lay themselves nearly to death. Try it! We supposed and had proven to ourselves many a time that about the greatest egg food that a hen could get was all the variety possible in her grain food and then a liberal dose of green cut bone every day: Take of pulverized copperas, 6 ounces; pulverized capsicum, 5 ounces; pulverized gentian, 5 ounces; pulverized fennugreek, 11 ounces; pulverized ginger, 6 ounces; pulverized Venetian red, 10 ounces; pulverized willow charcoal, 5 ounces. Add 2 pounds of ground shells if obtainable. Mix all together, and then add the other ingredients as directed below. Mix the above with 11 pounds of wheat bran and 8 pounds of linseed meal. If you cannot get linseed meal you can use cottonseed meal or ground alfalfa instead. The linseed is best if you can possibly get it, of course. If none of them can be obtained you can use all wheat bran. It is not so good, however. Give to each 24 hens about one quart or more once per day in a shallow box. Keep it before them all the time they will eat it, whenever they like. When chickens refuse to eat it altogether, stop their regular feed for a day or so and they will then eat it.

* * *

Uncle Frank Heck refuses to sell a copy of his book! Oh, fudge; he must be getting into the plute class. Is it possible that he has been making gold dollars that fast?

* * *

Yes, now that faking is such a subject and is so harmful, why not have it set forth in the next Standard just what is and what is not faking?

* * *

It will soon be time for Brother Robinson to prefer the charges he has threatened to at the next annual A. P. A. meeting. We trust his courage is still full sized.

* * *

Kansas will lose a valuable man next August when A. G. Philips, head of the poultry department at the agricultural college, leaves for Purdue University. Mr. Philips will be in charge of the new poultry division at Purdue and will be an associate in the experimentation station. The Purdue board has picked a good man to start the work. Mr. Philips graduated from the Kansas Agricultural College in the animal husbandry course in 1907, doing his major work in poultry. The next year he took advanced work in poultry at Cornell University and was then called to Kansas to take charge of the poultry work.

B.

When is a man obliged to keep his word. Ans. When no one will take it.

**Proposed Amendments to Constitution
and By-Laws of the A. P. A. 35th
Annual Convention, St. Louis,
Mo., August, 1910**

Amendment to constitution, offered by
Miller Purvis:

Amendment to Article VI, Sec. 15.
Section 34-A.—It shall divide the United
States and the Dominion of Canada into
districts to be known as Districts Nos.
1 to 10, for the purpose of organization.

Section 34-B.—It shall appoint one or-
ganizer to each of the districts named in
Section 34-A, whose duty shall be to
visit the principal poultry shows and so-
licit members for the association with the
understanding that for each member se-
cured they shall be allowed \$3.00.

Section 34-C.—When no branch asso-
ciations have been organized, the pay-
ment of the organizer shall be from the
treasury of the association. When branch
associations have been organized, the pay-
ments shall be made equally from the
funds of the association and the refund
due the branch association having juris-
diction in the territory wherein the mem-
ber has his residence.

Amendment to constitution, offered by
C. W. Zimmer:

Amendment to Article III, Sec. 1.
(e) Any state or province, or any dis-
trict composed of any combination of ad-
joining states or provinces, not exceeding
six in number, may be organized into
one branch association, subject to the
constitution and by-laws and the rules
and regulations of the American Poultry
Association. Each branch association,
through its properly accredited represen-
tative who must be a member of the
branch association, shall be entitled to
one vote at meetings of the American
Poultry Association for each twenty-five
of its members who are not present at
the roll-call.

Amendment to constitution, offered by
Fred L. Kimmey:

Amendment to Article V, Sec. 4. "The
traveling and hotel expenses of the pre-
sident, first vice-president, second vice-
president, secretary, treasurer and nine
elective members of the executive board,
for attendance at all executive meetings
shall be paid by the American Poultry
Association. The traveling expenses of
members of the executive board, sent by
branch associations shall be paid by
themselves or by the branch who sent
them. The traveling and hotel expenses
of all officers which accrue before the
commencement of their respective terms
of office, and which accrue after the ter-
mination of their respective terms of
office shall not be paid by the associa-
tion.

Amendments to by-laws, offered by
John H. Robinson:

Amend the by-laws by adding—Article
V. Members advisory committees. On
the written request of ten or more mem-
bers for advice as to the merits of any
method, system, formula, publication or
stock of a company or corporation, pub-
licly offered for sale to persons inter-
ested in poultry, the president shall with-
in thirty days appoint as an investigat-
ing committee three disinterested mem-
bers of the association competent to pass
upon the matter under investigation, to
investigate and to report to him without
unnecessary delay, and upon receiving
such report the president shall transmit
the same to the secretary of the Ameri-
can Poultry Association with instruc-
tions to have the report printed at once

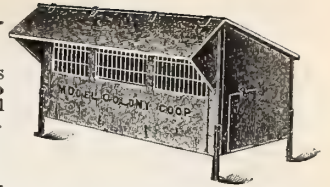

Model Portable Henery

Just the thing for the City Man, the Breeder, and for keeping hens
on the Colony Plan—a complete hen house. Economy Trap
Nests, simplest and most economical on the market. Never will
get out of order, and will always work. Made in wood and metal.

Model Brood Coops

Made of galvanized iron, collapsi-
ble, mice and vermin proof. Easily cleaned; by drawing two hooks bot-
tom drops out. Model Setting Coops, made of galvanized iron. Just
what you want when the hatching season comes. You can also use it as
a brood coop. Write at once. Catalogue
free. Please mention you saw ad in American
Poultry Journal. :: :: :: ::

Little Red Hen Poultry Tonic

Formerly Called Fryer's Roup and Cholera Cure and Egg Producing Tonic

This liquid tonic has proven to be such a wonderful cure for so many dis-
eases of chickens that we desire every one interested in raising poultry to
know it. It will cure a severe case of Roup in three to five days. Cholera
yields as quickly.

White Diarrhoea, the "terrible," will disappear so soon as the presence
of the Little Red Hen Tonic is known.

As a preventive this tonic is sure. It will aid in keeping the flock in a
healthy condition, increases the production of eggs and improves their fer-
tility. This tonic is prepared and shipped in quadruple or four times feed-
ing strength. To one quart add three quarts of water.

One quart, \$1; three quarts, \$2.75; six quarts, \$5. Small bottle, 50c. We
also have a 50c mailing size to send postpaid.

Wayne Poultry Tonic Co., Fort Wayne, Ind.

Poneto, Ind.

Dear Sirs:—I have been using your Poultry Tonic for four years and find it a sure
cure for roup, an excellent and powerful tonic and greatest egg producer I ever tried.
I never try to raise chicks without using it. I am never troubled with bowel trouble in my
chicks any more, and believe they grow and even fatten one-half faster with its use. My eggs
are always fertile now. I feed it all year. My hens are a great profit to me since using it.
It is the best I ever used or can find.

ALBERT YARGER.

Wayne Poultry Tonic Co., Fort Wayne, Ind.

A Great Record

No incubators or brooders on the market can show
such a record as that achieved by The Prairie State
machines. Their popularity which has made them the
choice of both beginner and expert to the extent that
they are considered the highest type—most practical and
successful of all others is the result of actual superiority
of material, construction, hatching and rearing principles.

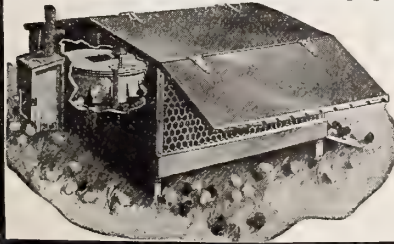

Prairie State Incubators and Brooders

have always embodied the very best known principles of artificial incubation, supplemented
by the best skilled construction and high-grade material. That's why they prove the best in
actual use. The Sand Tray feature alone is
sufficient reason for preferring a Prairie State to
any other incubator. The Universal Hoyer is
years ahead of ordinary brooding devices. When
such experts as Edward Corning, of Bound Brook,
N. J. endorse and use them exclusively they must
be the best. He writes:

"After trying your Universal Hovers we have dis-
carded all others, and intend to use them exclusively,
as they give perfect satisfaction."

Let us send you our 1910 catalogue—it will
deeply interest you. Write for a copy to-day.

PRAIRIE STATE INCUBATOR CO.
468 Main Street, Homer City, Pa.

and mailed to all members of the association and to the poultry press.

Amendments to Article III. Offered by J. H. Robinson, in accordance with unanimous resolution of a conference of officers of branches of the American Poultry Association, at Niagara Falls, August, 1909, attended by nearly all branch officers present at that meeting, to prepare and submit at the proper time an amendment to the constitution providing for the admission of individual members on annual payments, such members to have membership privileges in the branches only, until the full life membership fee had been paid.

Amend Article III, Sec. 1, by substituting the word "six" for the word "five" in the first line.

By inserting in paragraph (e) after the words "American Poultry Association" in the sixth line "and auxiliary branch members" and inserting after

fee of ten dollars. Auxiliary members shall have all privileges of other members in meetings and elections of branch associations, but shall have no part in meetings or elections of the American Poultry Association, either in person or by proxy.

Fifty per cent of each auxiliary branch membership fee shall be paid by the branch to the treasurer of the American Poultry Association, to be held by him on deposit until the auxiliary member qualifies as a life member, when it may, by vote of the executive board, be transferred to the general fund of the association.

Amendments to constitution, offered by Reese V. Hicks:

Amend Art. 3, Sect. 1-a of the constitution and by-laws by adding to the last of Sec. 1-a after the words "by the executive board," the secretary treasurer may receive applications in the form

annual meeting shall be held in connection with any poultry exhibit or display."

Amend Art. 3 of the by-laws by substituting the word "ten" for the word "two" in Sec. 9, fourth word in the first line.

Amend Art. 3 of the by-laws, Sec. 3 by substituting in the third line from the fourth word to the last word of the section the following: "On special blanks provided for in Sec. 10 of this article."

Amend Art. 3 of the by-laws by adding, "Sec. 10. The executive committee shall prepare a special blank mentioned in Sec. 7 of this article and also a blank to be used by the five judges who endorse applicants for license. These blanks shall be complete in every detail, showing applicant's experience, ability and integrity as a poultry judge, as well as his standing in the community in which he lives.

Sec. 11. All judges shall file annually with the secretary of the American Poultry Association a list of shows judged by them the past season, showing dates, estimates of number of specimens exhibited and secretaries' addresses.

Sec. 12. The executive committee shall have the power to annually revise the list of judges, and any judges who have not judged a sufficient number of shows that past season, or about whose competency to judge question may be raised by any member of the association, shall be summoned to stand an examination before the examining board as hereafter provided.

Sec. 13. The executive board shall annually elect an examining board of three members of the A. P. A. whose duties shall be to prepare eight separate sets of questions or tests to be used in examining any judges that the executive board may think need such examination.

Sec. 14. The eight sets of questions or tests before mentioned shall be for use at branch shows held in the first, second, third and fourth full weeks in the months of December and January. Said questions shall be sent to the A. P. A. judges at branch shows where applicants are to be examined by the chairman of the examining board. Said questions shall be opened on Wednesday of the show in the presence of all applicants to be examined. These tests may be by written questions, also by actual work in the show room under the direction of the A. P. A. judge. Where work in the show room is used the judge making the examination shall previously score the birds and the score shall not be communicated to the applicant or any one else. The scores, as made by the A. P. A. judge and by the applicant, shall be forwarded with the examining papers and answers under seal to the secretary of the A. P. A. These examining papers, answers and score cards shall be opened by the executive board at its next meeting and the merits of said applicant decided on by the executive board, giving due consideration to the skill and ability shown in the examination paper answers, scores, etc.

Sec. 15. The compensation of this examining board, as well as judges who make the examinations, shall be fixed by the executive board.

Sec. 16. The executive board is hereby empowered to provide further details and rules for carrying out the provisions for this examination.

Sec. 17. Applicants for judge's license shall be referred to the branch show for examination that in the opin-

SILVER WYANDOTTE.

A 94¼-point hen in one of the breeding pens of Walter Perkins, Ames, Iowa.

the word "members" in the last line "(except auxiliary branch members)."

By adding to section 1, (f) auxiliary branch. By unanimous vote of the executive committee of the branch, branch associations may accept as auxiliary members individuals not life members of the American Poultry Association under the following provisions and restrictions: An applicant for auxiliary membership must pay to the branch with is application a fee of two dollars and thereafter one dollar annually in advance until the total payments aggregate ten dollars, when he shall become a life member of the American Poultry Association. An auxiliary branch member may at any time become a life member on payment of the difference between the amount he had paid in annual fees and the life membership

hereafter provided for life membership upon payment of \$2.00 with the application and the further payment of \$1.00 per month for 10 consecutive months thereafter and applications so received shall not be voted into membership until the last month of the payment has been made.

Amend Art. 4 of the constitution, Sec. 3, substituting the word "two" for "three" in the last sentence.

Amend Art. 5 by adding the following: Sec. 5—No officer except the secretary-treasurer shall serve more than two terms in the same office consecutively.

Amend Art. 7, Sec. 1, striking out the words "in August" and substituting therefore the words "between July 15 and November 15."

Amend Art. 7 by adding "Sec. 3. No

ion of the executive committee is most convenient for the applicant.

Amendment to constitution, offered by Henry Steinmesch:

Amendment to Article V, Sec. 4. The traveling and hotel expenses of the president, first vice-president, second vice-president, treasurer, and nine elective members of the executive board for attendance at all executive meetings shall not be paid by the American Poultry Association. The traveling expenses of members of the executive board, sent by branch associations shall be paid by themselves or the branch that sends them. The traveling and hotel expenses of all officers, which accrue before the commencement of their respective terms of office shall not be paid by the association.

Amendment to constitution, offered by Amos Burhans:

Amendment to Article V, Sec. 3. The terms for all officers shall be for one year, except those of the executive board as otherwise provided, or until their successors are elected and qualified. All official terms shall commence with the new business at each annual meeting, except those of the vice presidents and the members of the executive board, whose terms shall begin one month after they are declared elected by the board of review at the annual meeting.

Amendment to Article XII. The constitution and by-laws of the association having been approved by a two-thirds vote of members at a regular meeting, may only be repealed or amended by a like vote by mail. Any appeal or amendment shall be offered in writing and copy of same forwarded to the secretary and president at least ninety days before the annual election. The secretary shall send notices of proposed amendments or appeals to the members at least sixty days before the annual election and the election commissioner shall prepare a ballot which shall include such proposed amendments and appeals and forward it to the members of the association with their regular ballot for the election of officers. Each proposed amendment or appeal shall be accompanied by the name of the member who suggests such change, both in being sent to the members by the secretary and on the ballot.

Amendment to Article IV, Sec. 6. Last sentence in said section. He shall keep on file all letters received, together with a carbon or duplicate copies of all letters sent out by him, for the information of the president or committees, and shall act as secretary of the executive board, and prepare a complete, stenographic report of all meetings of said board and the annual meeting, for the information of the members of the association.

Amendment to constitution, offered by Chas. Walker:

Amend Article X by adding thereto a new section to be known as Section 4 and 5.

Sec. 4. After the publication of each revised addition of the American Standard of Perfection, any member in good standing in the association may purchase for his own use, one (1) copy of said revised edition at the actual cost price (plus postage, if by mail) from the secretary of the American Poultry Association.

Sec. 5. Any member may also purchase as many of the American Standard of Perfections as he may want at the regular wholesale price, which he may sell at the authorized retail price. Any member selling them at less than the

authorized retail price shall be guilty of conduct unbecoming a member and he shall be dealt with accordingly.

Amendment to Article VI, Sec. 40. On receiving and counting the nominating ballots, the election commissioner shall ascertain by mail, within the ensuing thirty (30) days, who among the candidates nominated for each office are willing to stand for election. The candidates must notify the election commissioner by registered mail and designate the office to which he will stand for election (pro-

vided he has been nominated for more than one), and unless so notified the election commissioner shall not place his name on the ballot.

New varieties applying for admission to the standard:

Notice is hereby given to all members of the American Poultry Association that petitions and other papers for the admission to the standard of Barred Minorcas, Columbian Plymouth Rocks, Partridge Plymouth Rocks, thoroughbred Games, Aeels and R. C. Barred Plymouth Rocks

a season's work with a 15,000 egg Hall Mammoth Incubator

MAPLEWOOD FARM
Breeder of S. C. White Leghorns

RICHFIELD SPRINGS, N. Y., May 28, 1910.

THE HALL MAMMOTH INCUBATOR CO.,
Utica, New York.

Dear Sirs:—

Please make contract (of even date) for the purchase of an **additional 15,000 egg Hall Mammoth Incubator**, installation to be made during the month August, 1910.

The 15,000-egg Hall Mammoth Incubator that you installed for me last November has given **perfect satisfaction** both in the **ease of operation** and in the **function of hatching chicks**. The quality of the chicks has been **uniformly satisfactory**. During the period of brooding the death rate has been low, for the chicks seemed to be **extra strong** when hatched.

Since the 20th of April the fertility of the eggs laid here on my plant has increased, and since then my hatches have averaged about **75% of all the eggs set**,—I do not test. I had one hatch of **252 chicks from 300 Brown Leghorn eggs (84%)** that were brought here to be hatched. I have had considerable of this custom hatching to do.

The fact is, **more eggs have been offered me this season than my single 15,000-egg machine could accommodate**. However, by doubling my capacity to a total of **30,000 eggs per hatch**, I expect to be able to handle all classes of trade,—custom hatching, the baby chick business, and the chicks necessary for my own poultry operations.

With all good wishes, I remain,

Very truly yours,

(Signed) C. M. WOOLVER, Prop.

Hall Brooder System

JESSE P. SMITH
Breeder of Barred Plymouth Rocks

TAUNTON, MASS., April 12, 1910.

THE HALL MAMMOTH INCUBATOR CO.,
Utica, N. Y.

Gentlemen:—

It is surprising to know how **much** can be accomplished with **very little labor** when one has the **proper equipment**. This spring I have had the **best success I ever had, thanks to the Hall Brooder System**. My chicks are **doing fine** and sometimes I am not near the brooder house for hours. The heat is **easily regulated**, the hovers can be cleaned in a **very short time** (and for this reason my chickens this year are **free from lice**), so all we have to do is feed and water and watch them **grow**.

Wishing you the success you deserve, I am,

Respectfully yours,

(Signed) JESSE P. SMITH.

What does it mean to you to know that **100%** of the Hall Mammoth Incubators and Hall Brooder Systems installed during the years 1902 to 1909, inclusive, were in **successful operation** throughout the season of 1910! The Hall catalog is **free**.

The Hall Mammoth Incubator Co.

UTICA, NEW YORK

Dept. X

have been filed with the secretary, and such applications are now pending and will be presented at the 35th annual meeting of the association.

American Poultry Association,
S. L. Campbell, Secretary.

* REGAL WHITE WYANDOTTES MAKE A RECORD HATCH.

Today's mail brought us the following letter with affidavit, which explains itself. We doubt if ever a similar hatch was made under same conditions. It is simply perfection, and we congratulate both Mr. John S. Martin and Mr. E. H. Demsey.

To ship hatching eggs near to 2,000 miles and attain such results, stands for far more than we realize at first thought. To Mr. Martin all credit is due for these results. He has the goods in quality, and it is evident he gives them every care and serves his patrons as they should be served.

H. P. Schwab.

Arkadelphia, Ark., May 27th, 1910.

John S. Martin, Esq.,

Port Dover, Ontario, Canada.

Dear Sir: I am enclosing affidavit which will substantiate fully statements made in my recent letter to you. Whenever one is so fully repaid on an investment as I was in this instance, I think it nothing but right that I should advise you of the fact.

I do not know what success other patrons have had with your Regal eggs, but I want to tell you how well pleased I am with the two settings you sent me. I set fifteen the day they came and three or four days later I had another hen go to setting on the other fifteen. I got thirty of the finest, healthiest chicks you ever saw. I think it is nothing less than remarkable to send eggs so far and have them all hatch. It certainly shows excellent breeding care.

Thanking you for my success and hoping to do more business with you later on, I am,

Yours respectfully,

E. H. Dempsey, Electrician.

State of Arkansas, County of Clark.

Personally came and appeared before me the undersigned authority, E. H. Demsey, to me well known, who after being by me first duly sworn, deposes and says that he ordered and received thirty Regal eggs from John S. Martin of Port Dover, Ontario, Canada; that he used these thirty eggs for setting purposes and successfully hatched thirty healthy chickens out of thirty eggs set.

E. H. Demsey.

Sworn to and subscribed before me this 27th day of May, 1910.

C. W. Trousdale, Notary Public.

"BANTAMS OF QUALITY"

Is the title of a nifty little catalogue put out by Mr. Frederick G. Davis, Ben Avon, Pittsburg, Pa.

This catalogue has the stamp of quality on it throughout and is the finest one of its size we have seen. Several fine views of the plant in sepia half-tones are tipped in and add class to its appearance. The whole is in keeping with Mr. Davis as a man and the quality of Bantams which he breeds. His varieties are Cochins, Buff, Black and White Sebrights and Rose Combs.

This catalogue may be had by addressing Mr. Davis as above. His ad. appears elsewhere in this issue.

STANDARD HATCHERY CREDITORS.

If all creditors and persons who have sent money in advance for orders from the Standard Hatchery, Attica, Ohio, will send their names and details of order to Harlan James, Box 7, Texas, Baltimore county, Maryland, an effort will be made to investigate the failure of the above named company, with a view of securing a full return of the money.

NEW YORK STATE FARMS.

The helpful interest shown by the New York Central & Hudson River railroad in bettering farm conditions throughout the state has again been evidenced—this time by the distribution of a pamphlet listing farms that are for sale or for rent in New York state.

Over three hundred farms are shown upon the list, and 6,346 acres are offered for sale at an average price of less than \$20 per acre.

The farm list is well illustrated, showing some of the places that are offered for sale. Perhaps the most interesting photographs, though, are those showing the first steps taken on the New York Central practical farms at West Bergen and at Chittenango. The pictures of these farms show their present discouraging condition and the railroad hopes later to publish pictures indicating the real progress achieved.

A great many of the farms on the Central's list have the same possibilities as this property recently taken over by the company. To the man that takes hold of one of these farms to build it up the experience and methods followed by

BUFF WYANDOTTE COCKEREL.

First prize youngstown, Ohio, January 10-15, 1910; also color and shape special. Score, 94½. Bred and owned by Fred A. Poertner, Berea, Ohio.

the railroad will be of real help and encouragement. The farm list, for which no charge has been made, either for listing or in distribution, is full evidence of the readiness of the railroad to co-operate to the fullest possible extent in this work.

A copy of the list can be obtained upon application to any of the agents of the New York Central & Hudson River railroad, or W. C. Bower, Grand Central Terminal, New York City.

J. G. Buddle & Co., Oak Park, Ill., who purchased Zimmer's Red Raven strain of S. C. Reds, have had several reports of 100 per cent hatches, one where the eggs were shipped to California. This proves the wonderful vigor and vitality found in the Red Raven strain.

A. E. Blaker, Parsons, Kan., the well known breeder of Barred Plymouth Rocks, is offering some great bargains in hens this month. Write him for prices and mention the American Poultry Journal.

OUR PRIZE CONTEST.

To those readers who were interested in the grand prize contest which closed June 10 we will say that the prizes were awarded the following:

First—A. S. Johnson, New Jersey.

Second—Mason A. Green, Tennessee.

Third—Fk. W. Sistek, Pennsylvania.

Fourth—S. A. Shearwood, Montana.

Fifth—C. S. Hunting, Missouri.

Sixth—D. C. Wetter, Illinois.

Seventh—H. L. Johnson, Ohio.

Eighth—L. W. Ranker, Ohio.

Ninth—Mrs. C. A. Gifford, Texas.

Tenth—Marlow S. Hawkins, Indiana.

Mr. Johnson deserves great credit for the work he did in this contest, as he not only succeeded in winning the piano but also won the first special monthly prizes during the months of January, February, March and April and a watch in May.

Mr. Green, winner of the second prize, did not succeed in winning any monthly special prize with the exception of the watch he secured last month, but he sent in some subscriptions every month and is well repaid by the \$100 check he received as his prize.

Mr. Sistek is another agent who secured two monthly special prizes, having won third March special and second April special. He also received a watch last month, and these prizes, together with the \$50 grand prize, certainly repays his efforts.

Mr. Shearwood also won third February special and second March special prizes, besides the \$35 grand prize.

Messrs. Hunting, Wetter and H. L. Johnson are three agents who did not win any special prizes in any month, but all three were presented with a gold watch besides the grand prizes, of which Mr. Hunting won a \$30 prize and Messrs. Wetter and Johnson both won \$20 prizes.

Mr. Ranker, winner of the eighth prize, also won third January special in addition to the \$15 grand prize. Mrs. Gifford practically duplicated this by winning third April special and a \$15 grand prize. Mr. Hawkins, winner of the tenth prize, was the surprise of the day. He sent in his first two subscriptions on May 19 and then went in for a grand prize and succeeded in winning tenth prize by a margin of one subscription. For this feat he received a \$15 grand prize and a gold watch.

There were a good many agents who had a good opportunity to win a prize, but lost interest in the contest after having either won a monthly special prize or who missed winning one by a small margin. The most noticeable of these was Mr. Ira Bradford, of Pennsylvania, who won the second February special prize and missed the tenth prize by a small margin of two counts because he did not interest himself in the grand prizes. Mr. Dunbar, of Vermont, also lost out by a small margin after having won the second January special prize, for the same reason.

We will soon have another contest and will notify all our friends as soon as it is opened.

These contests give each and every person a chance to get good stock or poultry appliances by taking a few subscriptions to American Poultry Journal during their spare time. Make sure that you receive a copy of the prize list as soon as it is ready by telling us now, either by post card or letter that you want us to send you a copy. You will not regret it.

NEW YORK FOR A. P. A.

Organize Poultrymen to Secure Parcel
Post System. Lower Express
Rates and Secure Better
Service.

By "Bub."

The American Poultry Association has made a most wonderful growth since the meeting held at Niagara Falls in August last. Since that time over five hundred progressive poultry breeders have paid their \$10 fees and joined the association. This looks mighty good for the poultry business as a whole and speaks well for the hard working secretary, Mr. S. T. Campbell.

Seeing the need of a live wire working committee on organization, that will assist Mr. Campbell in keeping everlastingly at it, President Bryant appointed the following on such a committee to work with him and Secretary Campbell: Harry Collier, of Tacoma, Wash.; John A. Murkin, of Nashville, Tenn.; H. B. Donovan, of Toronto, Canada, Theodore Hewes, of Indianapolis, Ind., and Reese V. Hicks, of Topeka, Kans. Mr. Hicks having made a good record in going to Texas and helping secure fifty new members and assisting in organizing a Texas state branch, etc., was considered a valuable man by President Bryant and Secretary Campbell, as chairman of this committee. Thus he was appointed. Keep at it, Hicks, old boy, as G. N. says, and with your southern chivalry and northern integrity, together with the warmth of western progressiveness which you have freshly adopted since moving to hale and hearty Kansas where the wind blows hard and the alfalfa reigns supreme, may your measure of success be full, for we all benefit therefrom.

But as to what they are expected to do and, we believe, will do, if every chicken-interested body will join our ranks, is this—promote a greater interest in the poultry business in general and the American Poultry Association as well. Organize all poultry people for the purpose of advocating and securing the parcels post system. Go after the express companies with united effort to secure a revision of rates and better services. Go after the state officers and governor of every state and help breeders secure state aid toward promoting the poultry industry in that state. Develop a publicity department that will gather news that will develop the industry and awaken enthusiasm and see to it that such news is published in local or state wide publications that will reach the people directly in touch with that locality. Develop more and better institutes that will interest the farmer and by showing

him proper charts, figures, etc., besides telling him facts, help him improve his farm stock from a commercial standpoint.

Last, but not least, by a whole shot, is the need of three thousand new members for the American Poultry Association.

That is what this committee needs to back it up, and it needs it bad. Likewise, that is one of the first things now taking the attention of this committee. Let's break up the game right here in this twelfth inning of the A. P. A. year 1909-10 and

S. C. Black Minorcas

Eggs from pen headed by Chief Big Comb, \$5 per 15. Order now! Two-months-old pullets at \$1 each from best pens. Utility stock 75c or \$65 per 100. These can be delivered by June 15 or July 1. Send for booklet.

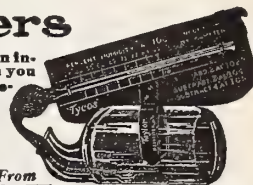

South Side Poultry Farm, F. C. Wing, Prop., Wayland, Michigan

"Tycos" Hygrometers

show the amount of moisture (humidity) in incubators. Don't risk eggs, time and money when you can insure hatches with a "Tycos" Incubator Thermometer and a "Tycos" Hygrometer.

A "Tycos" Instrument, supplied with any incubator, is the mark which proves that the maker puts value into his machine, regardless of cost. Insist on the "Tycos."

Taylor Instrument Companies ROCHESTER, N. Y. Where the Thermometers Come From

The Woodland Poultry Farm

WELL STOCKED WITH FINE POULTRY—White Leghorns, reliable stock, scoring 93 points, fine layers; White Rocks, Fishel's and Miller's Best; White Orpingtons, Cook's strain, the best layers and breeders, Philo system established and now in operation with 250 broilers in coops. Five acres of ground in pasture and growing feed, fine shade trees. A comfortable home and convenient out-buildings, a flowing well, an orchard with the best fruit trees and strawberry bed. This home with all furnishings and implements will be sold for \$3,500 cash to the first purchaser. A fine opportunity for those who wish a country home and an immediate income.

Dr. F. M. Wood, Prop., Lock Box 22, Woodland, Illinois

ARGUMENTS

Not needed as to quality when one goes to New York with a string of their very own birds and wins in

White Wyandottes

1st, 3d and 4th cockerel; 1st and 3d pullet; 2d hen; 5th cock; 2nd pen; 1st collection; many specials; and pen lost first only through slight injury to male's tail. Compare this with UNSUBSTANTIATED claims of "unbeaten" stock. You want a fine trio now, I can please you. You want 100 or 200 layers, I can furnish them. You want soon to win at a Fall fair, I can turn the trick for you or better still you want to win over some competitor this winter. Then you must write me for it's the hottest competition my stock wants. You say what it's worth to win, and I will see to it you do. Send 10c for handsome illustrated catalogue to the great specialist breeder.

ARTHUR G. DUSTON, BOX 1020, SO. FRAMINGHAM, MASS.

NOW IS THE TIME FOR

The Norwich Automatic Exerciser and Feeder

for growing stock and the fowls on range. Fill the hopper, and stand the machine in the shade. See that they have water and then go, attend your business. The machine will take better care of the stock than you possibly could. Saves nearly 25 per cent of the actual costs of feeding. Is positively rat and bird proof, rust proof and dust proof, and delivers only fresh, clean grain in just such quantities as you desire. Chicks will grow faster, mature quicker, and be stronger and healthier if fed and exercised by

The Norwich Automatic Exerciser and Feeder

while your waste is eliminated and the labor reduced to filling the hoppers when empty. It will cost you nothing to prove our claims. We guarantee them.

Norwich Automatic Feeder Co.

20 Water Street : : : Norwich, Connecticut

with the fleetest of the committee on bases, Campbell to bat, and Bryant to follow, let's run in about 200 more scores this month. Why not 700 new members for the year ending August 1, 1910. Every man's duty is joining, or, if already a member, his duty then is to send for application blanks to Secretary S. T. Campbell, Mansfield, Ohio, and then go out and secure ten or more new members. 200 more is easy if every one gets in the game.

BIG FIRM IS TO LOCATE IN CHICAGO.

Cyphers Incubator Company Acquires Site for Plant.

Announcement was made yesterday that the Cyphers Incubator Company, of Buffalo, N. Y., has closed a contract for 43,500 square feet of land in the central manufacturing district and would at once proceed with the erection of a large plant.

The improvements will consist of an office and warehouse building, three stories and basement high, a poultry mill four stories and basement high and an alfalfa mill two stories high. These buildings will be located on the tract just acquired through McKinney, Hoge & Manss on West Thirty-seventh boulevard between Iron street and Ashland avenue. Six private switch tracks from the Chicago Junction railway will connect with the warehouse and mills, which were designed by Alfred S. Alschuler.

The Cyphers Incubator Company, which is said to be the largest manufacturer of incubators and chicken feed in the United States, decided to locate in Chicago after considering various sites in other parts of the central West.—Chicago Record-Herald.

INTERESTING FACTS ABOUT COLUMBIAN WYANDOTTES

Notwithstanding the popularity and enormous demand for Columbian Wyandottes little is found in the press regarding this valuable variety. If you take notice of most of our poultry shows in America and see how well this variety is represented and even at three of the largest shows in the East they were the largest class entered, also notice that many of our prominent breeders are taking up Columbian Wyandottes because they see a promising future in them. I will say that the Columbian Wyandottes have won public favor not from the efforts of any individual, or club, but upon their merits. As to the origin of this variety it is not of much concern, and as many authorities differ on this subject I will not burden you with this line of talk. Now I will tell you why I breed Columbian Wyandottes. They are most prolific in egg production, in short they lay more dollars worth of eggs in a year, why? because they are the best winter layers, and as a table fowl most delicious, surpassing anything ever before introduced as a broiler and roaster, all will testify to this from the most humble cook to the French chef. I challenge the world to produce a more beautiful bird, wonderful in its markings. There is no combination of colors so catching and pleasing as that of black and white, you may travel from Maine to the Golden Gate and you will not find a fowl that has all the qualities of the Columbian Wyandotte, by their

beauty, by their utility, a combination that goes to make up all the good, "The Very Best All Purpose Fowl." They are hardy as chicks, can stand the most severe weather and mature quickly. In most cases pullets begin to lay at 5½ to 6 months and they make good mothers, but, on the other hand are not persistent setters, it only takes about two days in breaking them up. They will stand confinement and on the other hand are also good foragers, it takes but little feed to keep them in good condition. The Columbian Wyandottes are of medium standard weight which is as follows: cocks, 8½ pounds; cockerels, 7½ pounds; hens, 6½ pounds; pullets, 5½ pounds. Now dear friend get in the band wagon and begin breeding Columbian Wyandottes; buy a few birds of some good reliable breeder, be sure to get a good foundation and success is sure to be yours. If you take care of the Columbian Wyandottes, they will take care of you. If anyone wishes to know more about the Columbian

Cuckoo Wyandotte cockerel from first pen Madison Square Garden, 1910. Bred and owned by E. L. Geisel, Morganville, N. J.

Wyandottes I will be glad to hear from them. Mention American Poultry Journal.

CARE OF CHICKENS IN THE TOWN—SEND TESTS.

Hon. C. F. Townsend, president of the National Poultry Association, is conducting a series of extensive tests at his home in Weedsport, N. Y., in which only the finest birds, from breeders of unquestioned standing, are admitted, writes Mr. George Cugley, the well known manufacturer of Springfield, Ohio, who recently visited Judge Townsend and took careful notes of his methods.

The varieties that have been admitted thus far include pens of U. R. Fishel's exhibition White Plymouth Rocks, the late R. C. Tuttle's Rose Comb Rhode Island Reds, F. I. Bennett's Buff Leghorns, S. A. Nofztger's Partridge Plymouth Rocks, Judge Lewis' Brown Leghorns, L. Y. Perry's Rose Comb White Leghorns, a pen of exhibition Houdans, which was subsequently withdrawn, and an unnamed variety of new rose comb buffs. Test shipments of eggs were made to various points from Maine to Oregon and from Wisconsin to Texas. Reports on these shipments, covering

lowered express rates—thanks to the energy of the National Poultry Association—on various packages used, the hatching of such eggs, etc., will be made later, when the reports of the 1910 results with the adult fowls are made public.

The chick tests were numerous, interesting and valuable. Incubating was done with various machines and with hens. With the sole exception of the Reds the eggs were remarkably fertile. The hens used were Wyandottes, Plymouth Rocks and Rhode Island Reds, and with them several hatches of from 90 to 100 per cent of all eggs set were recorded. The hens were set in Nieman Bros. metal coops and in common boxes; but in every case they were placed on sods with the grassy side up, and a handful of litter thrown in—the object being to get as near to nature as possible. Record hatches were made by the Buckeye, Cyphers, an old-style Model and an Old Trusty. Before setting, all eggs were dipped in a creolin solution—one gill of creolin to eight quarts of water. The hens were treated for lice before setting and at the beginning of the third day before the hatch was due.

When the hatch was over all chicks were placed in Lullaby brooders—from ten to twenty in each—where they rested, warm and cozy, for from thirty-six to forty-eight hours. Then a small amount of fine grit and medicated charcoal was placed in each brooder, the bottom of which was covered with a deep litter of short cut alfalfa. Two hours later a first meal of Parks & Pollard's Gritless Chick Feed was given.

BUFF WYANDOTTES OF THE BETTER KIND.

As Seen by Our Artist, Mr. L. A. Stahmer, at Mattison and Toel, So. Shaftsbury, Vermont.

During the early part of the month of May it was the writer's privilege to visit the yards of Mattison & Toel, the well-known breeders of Buff Wyandottes, whose phenomenal annual winnings at Boston and New York during the last twenty years have brought them before the public's eyes and stamped them as the foremost breeders of this variety in the country. The writer, having bred Buff Wyandottes himself at one time, was familiar with their great record and expected to see some good birds, knowing well the difficulties in breeding perfect colored specimens of the correct Wyandotte type. Well, "we came, we saw," and we were conquered. NEVER (note we spell it in capitals) have we seen so large a lot of Buff Wyandottes with such good coloring and type as the lot that greeted our eyes. Color of that so much desired golden buff shade running down to the skin, absolutely free from black in tail and wings. Wyandotte type that would satisfy the most fastidious breeder of this variety, together with perfect condition, such are the birds we saw. Correct type and color—how many have despaired of ever attaining this desired result in Buff Wyandottes—here we saw it in profusion, hundreds of birds of the same type and color, we shall remember them for a long time to come.

It is customary for some representatives of a poultry journal, when they visit a fancier's yard, to pick out one or a few of the good birds and elabo-

rate on the write-up of these individual specimens. But I would certainly be "up against it" if I were to apply this rule to Mattison & Toel's birds, for this one reason—they have not got one or a few good birds, "THEY HAVE HUNDREDS" of a quality so uniform that it is hard to pick out the best. I will only undertake to mention a few prize winners, which will convey something of an idea of the high quality of the entire lot, as well as to convince the most skeptical that their prize winners are used in their breeding pens, and not borrowed for

exhibition purposes. I saw the Boston 1909 winners, as follows: First and second prize open class cockerels, first prize cock, first and second prize pen cockerels, and the eight first and second prize pen pullets. Boston 1910 winners as follows: First and second and sixth prize cocks; first, fourth and sixth prize cockerels; first, second and fourth prize hens; first, second, third and fourth prize pullets; all twelve pullets in first, second and third prize breeding pens; also cock and four hens comprising first prize pen fowls.

That this is not hot air talk and an established fact was proven at the recent Boston show, where they exhibited among others three pens of their Buffs. "The judge was up against it." He almost had to draw lots before he could decide which pen should be placed 1, 2, 3, so uniform in color were these birds that each one seemed the exact counterpart of the other. Twenty years with Buff Wyandottes has given Mr. Mattison the knowledge of producing the best, and the great record at Boston, 1909, also 1910, where they won every first prize offered in this variety, is the "proof of the pudding." For the reader's benefit, we will mention that we saw a most beautiful herd of Jersey cattle at their place, the individual values of some of these animals running up to \$10,000. Cows dams sold at auction for \$3,700 and \$2,600 and sired by a bull who also sold at auction for \$10,000, and in calf by a bull that sold at auction when but eight months old for \$10,200. This only goes to show that a man who can breed cattle of this value certainly would not tolerate a poor specimen of a chicken around the place.

We found 1,100 chicks already hatched out, and the eight incubators in use will bring the total number of chicks well up to two thousand chicks by July 1, which is the anticipated number they desire to raise at home. They also have many chicks raised by farmers for them, but just how many were hatched out at the time of my visit could not be ascertained. And the beautiful buff color which they will have at maturity, together with the blue of the first prize ribbons, which many of them will win, forms a pleasing color combination in our mind.

Mr. Mattison's experience, covering the past twenty years, or since the origin of the breed, is the best possible argument of their conviction that this variety is rapidly coming to the front as a practical all around fowl, and I am frank to admit my surprise in finding so well developed a business proposition minus any new-born enthusiasm, and plus practical buildings, environment and birds, all of which suggested thrift and success that could only come from well developed plans, worked out by men behind the guns who knew how to use the very best of material by having been schooled by years of practical experience. Everything about their farm is kept up in first class shape, cattle and poultry buildings of all kinds of a good, substantial but plain nature, built for comfort and successful handling of their herd and flocks.

Their 1910 mating list gives a description of the late winners of Boston and contains opinions from some of the foremost judges in the country. They send it free.

INSPECTION OF LARGE POULTRY OR STOCK FARM BY J. F. LAUGHLIN, ELMIRA, N. Y.

Have you ever visited a large, up-to-date, sanitary and systematically managed stock farm?

On the 18th inst. I had occasion to visit Utica, N. Y., and residing in Elmira, N. Y. (the home of the Philo system), and as I am interested in poultry, through which I heard of the celebrated Session Stock Farm, located about four miles from Utica proper, to which I decided to ask the privilege of paying a visit, thinking perhaps to glean some valuable points as to care, condition, etc.

Entering a telephone booth, I found the farm listed with a Mr. Ackerman as manager and general overseer, with whom I requested to speak. He immediately answered the call and informed me that he would be only too glad to have me spend a couple of hours or longer

expense, and situated in a nice southern exposure. Here were 1,840 S. C. W. L. baby chicks, divided into eighteen pens, each containing one hover, so arranged as to be cleaned and cared for from an aisle or corridor extending along the front of the pens. The chicks could be let into the hover, and a slide then dropped, thus holding them there until the pen could be swept and replaced with a fresh supply of litter, and water cups cleaned and refilled.

A slide door opened by drawing a cord from the corridor or passageway, permitting them to pass to the outdoor runs. The attendant told me they had only lost 36 out of this large flock of 1,840 in two weeks from hatching. The temperature of the brooding house, which, though well ventilated, was very mild, being heated with a modern hot-water Hall brooding system. Aside from the pens and hovers which contained these 1,840 chicks was the same number of pens and hovers awaiting the

operating of this brooding house was not any more labor or expense (that is, the heating apparatus) than a couple of small brooders with oil lamps. The house is 77x30 feet, two coal heaters doing the work, and would do it if they at any time see fit to enlarge the brooding house.

Next I was shown the incubator cellar, where I expected to see dozens of large incubators, but, much to my surprise, only one great long incubator was all it contained. The attendant then noticed my surprise, and, looking up, said, "This is our Hall Mammoth." It is useless to say that I did not attempt to contradict him, as I could readily see that it was a Mammoth. It was my first sight of a machine holding several thousand eggs, and I must say it is very simple indeed.

As my own two high-priced incubators were in operation at home, and not always finding the temperature where I would like to have it, I looked through the glass in the Mammoth and found the temperature positively standard, and no variation in any of the egg chambers as the machine was filled when started. The attendant informed me that eggs could be put in so as to fill one tray each day, the temperature to be controlled by the raising and lowering of the egg trays. The trays were of fine screen wire, and under the tray on the bottom of the machine proper were cracks large enough to pass a pencil through. I asked if this would not have a tendency to cool the under side of the egg, and was promptly told that a hen does not warm the under side of an egg as much as the upper side when she lays on the ground or in a natural nest. One small shovel of coal twice in twenty-four hours heats the water used to heat this machine, similar to the heating of the brooding house. The manager claimed he had hatched 78 per cent of the eggs placed in this machine, and he certainly had the chicks there to prove this statement, and as they were introducing all new stock for the coming year all eggs being incubated were purchased from the W. R. Curtiss Farm at Ransomville, N. Y.

Before leaving the farm I was shown 72 head of beautiful thoroughbred Jersey cows and all the latest sanitary machinery for bottling milk and making butter. Vegetables were grown very extensively on this farm, also grain, hay and ensilage for cattle and poultry food. I intended to visit several more large farms during the remainder of the week, where much larger Hall Mammoth incubators and brooders were in operation, but was called home by telegraph late on the evening of the 18th. It is my intention to visit the large poultry plants whenever I have an opportunity.

I find it an education in itself, and you are always welcome to call on the poultry fraternity. Mr. Session, the above named proprietor of the Kenotin Stock Farm is not selling stock; hence please refrain from writing him.

J. F. Laughlin.

C. AND A. THE ONLY WAY.

The Chicago & Alton railroad is direct from Chicago to St. Louis and their service and equipment are the equal of any road. We intend to travel on the C. & A. and suggest you do likewise.

A noted prize-winning Buff Plymouth Rock. Bred and owned by S. D. Lapham, Dearborn, Mich.

with him, and would send a carriage to the depot to take me out to the farm.

As we drew near the place I was greeted with a pleasing sight of spacious, well-kept lawns, dotted with numerous flower beds and intersected with smooth macadam roads, bordered by neat flag walks leading up to a beautiful residence. Mr. Ackerman, the manager, had evidently been on the lookout for me as he advanced to meet me as soon as we reached the house. I received a hearty welcome and was led to the poultry houses, which I found to be up-to-date open-front houses, built on the continuous plan, accommodating about 1,500 birds, and a more beautiful flock of S. C. W. Leghorns I never set eyes on.

Passing on we came to a long brooding house, recently completed at some

next hatch. If I remember right, the attendant told me this brooding house accommodated 3,600 to 4,000 chicks, and even more when the weather would permit them to run out of doors during the daytime. I must say I did not see a sickly or humped up looking chick in this house, all appeared to be healthy, lively and strong, and very large for two weeks old.

I spent something like two hours discussing the various topics pertaining to poultry and poultry raising. I particularly looked for the white diarrhoea chicks, but did not see any. I am now more confident than ever that much of the bowel trouble comes from poor brooding, uneven temperature and chicks being chilled in morning after being too hot during the night. I was informed by the manager that the

GOOD TO KNOW

By C. W. Zimmer

This department is open to all readers and advertisers in the central territory, and they are invited to send in all poultry news items that come to their attention. Address C. W. Zimmer, 358 Dearborn Street, Chicago, Ill.

Hurrah! for the glorious Fourth of July.

Don't give Polly a cracker, anyway not the kind that goes off.

You can get Buff Leghorns and Barred Rocks at greatly reduced prices of Gage & Huston, Williamsport, Pa.

Kitanning, Pa., May 31.—M. A. Milliron, former county superintendent of schools, who is an enthusiastic poultry fancier, has a freak that is regarded as the "Siamese Twins" of hendom. This product of a double yolked egg consists of two chickens, joined at the sides. One of the twins is a hen and the other is a rooster. Quarrels between the inseparable pair are frequent. Early in the morning the rooster insists upon crowing, disturbing the slumber of its sister. When the latter wants to lay an egg, the rooster prefers to hunt for worms. What will happen when the hen gets broody is awaited with interest by the freak's owner.

New Castle, Pa., May 31.—Billie Grafius, an old professional ball player, now residing here, has a remarkable natural freak. It is a chicken that was hatched today at his home, having three distinct heads.

When a railroad can't make expenses it goes into the hands of a receiver. When a man on a salary can't make expenses he wants to go into the chicken-raising business.

A hen may pick up a useless pebble occasionally, but she doesn't overlook any corn.

A good investment is frequently the one a fellow doesn't make.

A man acquires a lot of wisdom after it's too late to use it.

Be wise now and advertise in A. P. J.

Advertising pays in proportion to the amount of conscience in it. That is, in proportion to its ability to instil confidence in the mind of the reader.

The advertisement that pulls, also pushes.

Money would be of no account if the other fellow didn't want it.

Money also makes the auto go.

A sacrifice sale is now on at the White Oak Poultry Farm, Lima, Ohio. R. H. Gamble, proprietor, is offering at greatly reduced prices several hundred White and Black Orpingtons, also S. C. White Leghorns.

F. S. Nicholson, Otisville, N. Y., is closing out his breeding stock of Barred Rocks at reduced prices. See ad. elsewhere.

Advertising is sometimes like fishing: a fellow always imagines he would have caught more on the other side of the stream. There is nothing like stick-to-it-iveness if you want to win.

People ought to rest as hard as they work.

You can't beat the advertising game by advertising that you don't advertise. Do you know one successful poultry man who is not a generous advertiser. Well, then, take heed and do likewise.

Which is swifter, heat or cold? Ans. Heat, because we can catch cold.

R. C. Black Minorca breeders are offered some fine cock birds in the ad. of J. S. Bales, Springfield, Ill., R. 2.

A valuable book on poultry is being given away free by the Egan Poultry Food Co., Jackson, Mich., with every order for their Peerless Poultry Powder. See their ad. in this issue.

The White Feather Poultry Farm, Rocky River, Ohio, breeders of S. C. White Leghorns, report 1,500 head of fine young stock, so they can supply you with stock for early exhibitions.

One thousand five hundred head of fine young Rhode Island Reds, 500 of which now weigh three to three and one-half pounds, is the good word received from Bay View Poultry Farms, E. W. Bogert, proprietor, Port Washington, N. Y. If

"Pioneer"—The head of the beautiful Blue Orpington pen of ducks, imported and owned by the Sunswick Poultry Farm, South Plainfield, N. J.

We lead, others follow. Better advertise in A. P. J.

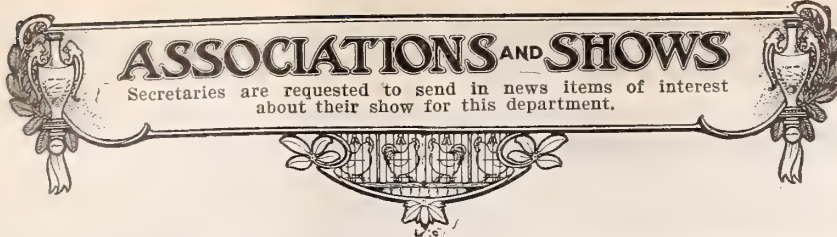

Mr. Fred A. Poertner, proprietor Buff Poultry Farm, Route 4, Berea, Ohio, has issued a neat summer sales list in which he has quoted many bargains on Buff Orpingtons, Buff Wyandottes and Buff Rocks. This sale includes many prize winners which he will sacrifice.

What is the most awkward time for a train to start. Ans. 12:50, as it's ten to one if you catch it.

Why is life the greatest of all conundrums? Ans. Because we must all give it up.

you want R. C. Reds to exhibit at the early fairs you can get them of Mr. Bogert.

E. B. Thompson, Amenia, N. Y., originator and breeder of the world-renowned "Ringlet" Barred Plymouth Rocks, has just issued a special sale list, which contains bargains the equal of which has never before been offered to our readers. Mr. Thompson is one of the oldest and most successful breeders of Barred Plymouth Rocks in the country and those in need of high bred Barred Plymouth Rocks should not fail to get a copy of this sale list of real bargains. Write today and mention the American Poultry Journal.

Secretaries are requested to send in news items of interest about their show for this department.

Winnipeg Industrial Exhibition—Winnipeg, Canada, July 13-23. A. W. Bell, secretary.

A GREAT SHOW AT TOPEKA, JAN. 2-7.

The Topeka Show Association is the name of the new organization formed at Topeka, the capital city of Kansas. On June 10 the following officers and directors were elected: President, J. W. F. Hughes, Topeka; first vice-president, S. T. Divinia, St. Joseph, Mo.; second vice-president, A. C. Rasar, Topeka; secretary-treasurer, E. W. Rankin, Topeka; election commissioner, W. H. Maxwell, Topeka; board of directors, C. H. Rhodes, Topeka; Ernest Kellerstrass, Kansas City, Mo.; W. H. Vesper, Topeka; George H. Burghardt, Topeka; W. S. Binkley, Clay Center, Kan.; R. B. Steele, Topeka; C. J. Page, Salina, Kan.; C. C. Lindamood, Walton, Kan.; L. P. Hubbard, Topeka.

The association is financed by the issue of stock, the members being stockholders. The capitalization is \$1,000. Most of the stock has already been subscribed.

The 1911 show will be held during the first full week of January. It will be conducted along some lines never before attempted. Full announcement of these new features will be made later. The entry fee will be \$1. The show will be judged by comparison. The birds will be uniformly cooped.

A formidable list of judges will place the awards. Arrangements have been practically concluded with the following: Lester Tompkins, A. C. Smith, Charles H. Rhodes, E. C. Branch, C. S. Byers, E. G. Roberts and R. F. Palmer. No stronger list of judges will appear at any show in America. The announcement that Lester Tompkins will pass upon Rhode Island Reds, A. C. Smith upon Barred Rocks and Brown Leghorns and C. S. Byers upon Orpingtons will bring out a strong showing of these varieties. Some of the leading breeders of the country have already announced their intention of exhibiting.

Topeka is one of the best show towns in the country. Its Auditorium has few superiors as a show hall. Railroad

S. C. R. I. Red Eggs

After June 1st, \$1.25 per 15; \$3 per 45; \$5 per 100. As good as the best. Satisfaction guaranteed. Breeders for sale. : : :

Will H. Schadt, Box 6, Goshen, Indiana

and express facilities are unexcelled. Kansas is a great poultry state and Kansas fanciers are hungry for a show along down-to-date lines. S. T. Divinia, of St. Joseph, Mo., was present at the meeting of June 10. The feeling of many fanciers in other states is shown by Mr. Divinia's reason for attending this meeting. "Missouri fanciers," said Mr. Divinia, "need a great show in Kansas, and Topeka is the place for it."

The attention of members of specialty clubs is called to Topeka and Kansas as a splendid place for their 1911 meetings. Especially liberal inducements will be offered to specialty clubs.

The Topeka show will be more than a local show, and more than a statewide show. It is certain to rank as one of the great national shows of the season of 1910-1911.

For further information address E. W. Rankin, Sec'y, Topeka, Kan.

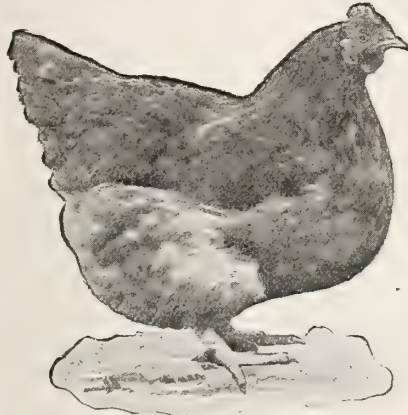

OHIO VALLEY EXPOSITION.

The aristocracy of the barnyard will hold triumphant sway at the Ohio Valley Exposition, Cincinnati, Ohio, for one week during the progress of that auspicious industrial enterprise, which opens on August 29 and continues for four weeks. This convocation of the blooded egg-producers of the Ohio valley and the South is designed to be the classiest gathering of chickens, ducks, turkeys, geese and guinea fowl ever assembled in the Middle West. In order that the feathered pets, descendants of sires and dames that have made history in the poultry world, may be seen under conditions as benefits their rank and station, the exposition management will erect a building 34 by 350 feet in which the proud and haughty beauties of the barnyard may display their fine points. This building will be erected with the view of affording the best opportunities for exhibiting the entrants, and also with the idea of having a strictly sanitary structure, so that general conditions for the exhibition will be ideal. There will be cash prizes in all the classes, making it an object for breeders from distant points to enter the show, not only for the direct returns to be received, but also for other commercial purposes, as there will be hundreds of thousands of visitors at the exposition from all portions of the Ohio valley and the South, many of whom, no doubt, will be interested directly in an exhibit of this kind. The members of the Cincinnati

Pet Stock and Poultry Association are co-operating with the management of the exposition in arranging the details of the show, which promises to be of greater benefit to breeders than any exhibition ever held in this section. It is also planned to have a dog show, a pigeon show and a cat show during the run of the exposition, each of these, like the poultry show, to run one week.

A GREAT FALL POULTRY SHOW, EQUALING THE BIG WINTER SHOWS.

The great Allentown Fair Poultry Show, beginning an advertisement in this issue, is probably the best fall poultry show in America. A good many poultry breeders and fanciers formerly looked down upon a fall fair poultry show, but that day is past. A fair

BUFF ORPINGTON PULLET.

Just as the camera saw her, no retouching. The type used by Fred A. Poertner, Berea, Ohio.

association like that at Allentown, Pa., which is very old and has the reputation of holding the biggest and best county fair in this country, lacked by great resources and wealth, can and does give the poultry world everything the big winter shows do and some things they don't do. For instance, Allentown to date has had the finest exclusive poultry show hall anywhere, with cement floor aisles fifteen feet wide and light and ventilation equal to outdoors.

It has the best judges the land affords, with every detail of up-to-date poultry show management brought right

up to the minute, guaranteeing to all exhibitors, big and little, a square deal and first-class attention to and handling of their stock. A three-day show only, and then closed at dark. Or, birds need be in their coops only from Tuesday noon to Friday noon, leaving plenty of room at both ends of the week for the coming and going.

Not a single bird has ever been lost here.

First prize on single birds, \$4; on five birds, or pen, \$20. Two only to fill.

The management is under the well known W. Theo. Wittman, a man who was an exhibitor himself for many years and knows what exhibitors want and demand. No employee, no judge, no officer can show any birds at Allentown, and the smallest exhibitor gets equal treatment with the biggest. A win at Allentown carries reputation and carries weight and being in one of the richest sections of America, both agriculturally and otherwise, many sales at long prices are made there.

Write for a premium list and try Allentown this year.

TRANS-MISSISSIPPI SHOW.

The poultrymen of Omaha, Council Bluffs and South Omaha and many other leading breeders of Iowa and Nebraska are working hard to insure a great successful show to be held under the management of the Trans-Mississippi Poultry Association. This will be their seventh annual show. It was held three years in South Omaha and three years in Omaha, and rumor has it that Council Bluffs, Iowa, directly across the river from Omaha, will get the show for the next three years. Council Bluffs has a large, new, well-lighted auditorium, which, if anything, is even larger than the one in Omaha. Plans are under way to coop the show with Empire uniform cooping and the comparison system of placing the awards will prevail. Anton Lundstrom, of Omaha, Neb., the hustling secretary, writes us that Judge W. S. Russell, of Ottumwa, Iowa; W. C. Ellison, of Minneapolis, Minn.; Russell F. Palmer, of Fremont, Neb.; Thomas W. Southard, of Kansas City, and Victor O. Hobbs, of Trenton, Mo., will place the awards. There is no question but what this will be one of the great shows of 1910-11.

PHILADELPHIA, PA.

The fifth annual show of the Philadelphia Poultry, Pigeon and Pet Stock Association will be held at the Second Regiment Armory, Broad and Diamond streets, the week of December 13-17, 1910. They are planning to make this show bigger and better than ever before. The best judges will be procured and many clubs have agreed to meet there.

THE TENNESSEE STATE FAIR POULTRY SHOW.

The great Tennessee State Fair Poultry Show takes place this year at Nashville, Tenn., September 19-24. This show is recognized as one of the greatest state fair shows in the Union. It is patronized by breeders each year from almost every section of the country. The poultry show at the Tennessee State Fair is made one of the big features of this great fair.

Thousands of people attend the Ten-

nessee State Fair Show each year for no other purpose than to see the poultry show and purchase stock and eggs. A big list of cash, regular and special premiums have been posted and the 1910 show promises to eclipse any previous event.

For premium list and entry blanks address John A. Murkin, Nashville, Tenn.

MISSOURI STATE FAIR, OCT. 1-7, SEDALIA, MO.

They have shown you that they "do things" down in Missouri. Well, they will again show you a larger exhibition of poultry this year than ever before. W. S. Russell will judge. No entry fee is charged, and the prizes will be \$3 on first; \$2 second, \$1 third; pens, \$5, \$3, \$2. Turkeys and ducks get similar prizes, while Bantams get one-half as much. Many prizes are offered on pet stock. Entries close September 24. Send for premium list.—John T. Stinson, Sec'y, Sedalia, Mo.

MICHIGAN STATE FAIR, SEPTEMBER 19-24, DETROIT, MICH.

A big fair is promised, for everyone is working hard. Many celebrated attractions will be there, including twenty-four flights of Wright Bros.' aeroplane, a big auto show, a fireworks in the evening. Sanitary conditions will receive careful attention. The poultry department will be large, as generous prizes are offered. For premium list send to J. E. Hannon, Sec'y, 501 Bowles Bldg., Detroit, Mich.

EMPIRE POULTRY ASSOCIATION INCORPORATED.

The Empire Poultry Association, Inc., show committee, having held several meetings since their third annual show last November, held a meeting on April 29, and it was the unanimous vote of the committee that they had outgrown their former show hall at Richmond Hill, N. Y., and being unable to find a suitable place in Brooklyn, they arranged to hold their next show at Grand Central Palace, Forty-third street and Lexington avenue, New York city, November 18 to 24, 1910, where they propose to bring forward some new ideas in the showroom and not only make it the first big show of the season 1910-11 but the most advanced show of the country. The entry fee will be on single entries; large poultry, \$1.50; bantams, \$1; pigeons, 75 cents; pet stock, 50 cents; exhibition yards, \$3; display cages, \$5. Robert Seaman, Jericho, N. Y., was appointed general manager.

WILLIAMSPORT, PA.

The third annual exhibition of the great Williamsport show will be held November 30-December 3, 1910. Last year Williamsport at a single bound sprang to the front as a leader in the East. Judges H. P. Schwab and Theo. Wittman have been secured to place the awards. For full information write James T. Huston, Sec'y, Williamsport, Pa.

BIGGEST AND BEST.

Kansas City will have one of the largest poultry shows of the coming season next September. It will be held in connection with the Missouri Valley Fair & Exposition, September 24 to 28, 1910. This fair will be held at Electric Park, "The Coney Island of the West," a beautiful amusement park built at a cost of \$500,000. It is filled with artistic and commodious buildings, giving ample accommodations for this its second annual fair. Last year's poultry show was a great success; 1,500 birds were shown. The plans for the coming season are on a much larger scale. The association offers large and most liberal premiums, cash specials and cups galore. You must get the premium list to appreciate its inducements to the poultry breeders.

Premium lists are now ready. Address C. S. Hunting, Supt. Poultry Dept., 1304½ Main St., Kansas City, Mo.

MANSFIELD, OHIO.

The third annual exhibition of the Mansfield Fanciers' Association will be held December 5-10, 1910. S. B. Lane, judge. Sherman Bowden, Sec'y, Mansfield, Ohio.

PENDER, NEB.

The Northeast Nebraska Poultry Association was recently organized with eighteen members. They will hold a show in December, particulars of which will be announced in a short time. For full information address R. Chow, Sec'y, Pender, Neb.

Tell your friends about the good things in American Poultry Journal. They will be interested and thank you.

EVERYTHING FOR POULTRY KEEPERS

COMPLETE FREE CATALOGUE AND ANNUAL POULTRYMAN'S GUIDE

WE MANUFACTURE SEVENTY-TWO DIFFERENT ARTICLES for up-to-date, progressive poultrymen and women, ranging from Cyphers Mammoth Compartment Incubators holding 50,000 eggs at one filling down to 10-cent trial packages of Lice Powder, and every article is warranted to be as represented and is guaranteed to give satisfaction or money refunded. Standard goods we manufacture and sell include the following:

Incubators
Brooders
Brood Coops
Chick Shelters
Brooder Stoves
Leg Bands
Egg Packages
Egg Testers
Caponizing Sets
Scratching Food

Developing Food
Chick Food
Forcing Food
Laying Food
Short-Cut Alfalfa
Shredded Alfalfa
Meal Alfalfa
Full-Nest Egg Food
Nodi Charcoal
Poultry Remedies

Lice Powder
Lice Paint
Napcreol (Disinfectant)
Anti-Fly Pest
Egg Preservative
Fumigating Candles
Drinking Fountains
Critt and Shell Boxes
Food and Water Holders
Roost Supports

Roosting Paper
Spray Pumps
Powder Guns
Wire Fencing
Bone Cutters
Chick Markers
Bone Mills
Roost Cutters
Nest Eggs
Poultry Books

OUR COMPLETE CATALOGUE FOR 1910

Consists of 160 pages, 7½ x 10 inches, and contains an illustrated description of all goods we manufacture. Tells about freight rates, gives prices, etc. Contains five instructive chapters on successful incubating, brooding, feeding, heavy egg yields, etc. Illustrates and describes our \$40,000 poultry farm—the largest in the world owned and conducted by an Incubator, Brooder and Poultry Supply Company.

THIS BIG CATALOGUE and Poultryman's Guide is **FREE** postpaid to any address if you will kindly mention that you saw our advertisement in this paper. Note below our six places of business in the United States which insure low freight rates and prompt delivery of goods. Address Home Offices or Branch Store nearest you.

GROWTH OF AMERICAN WHITE ORPINGTON CLUB.

No other specialty poultry organization has made such a wonderful growth in so short a space of time as the American White Orpington Club. When the club's book on White Orpingtons was issued last November the membership listed only 74 persons. This book, however, was sent broadcast to breeders of this grand breed of fowls and the membership was rapidly increased. As many as 23 names was received in one day, and today this live organization has over 300 members, located in practically every state in the Union, as well as members in Mexico, Canada and England. Every breeder or fancier of White Orpingtons should become a member. It is for their interest.

Special prizes are offered at all the shows over the country, open to competition of members only, the winning of which stamps their stock as that of quality. The fee of initiation is \$1, which pays for a year's dues when you join, and annual dues are only \$1 thereafter. Life membership, \$10. Full information and club book can be obtained by writing

F. S. Bullington, Secretary.
Richmond, Va., Box 328.

THE NATIONAL POULTRY ASSOCIATION.

The National Poultry Association is a young society. It is only a year since its organization was completed, yet during that time it has accomplished no little good.

It has protected its members from the dishonest or unscrupulous.

It has exposed certain frauds and is gathering evidence against others—some of which will be startling.

It has started a strong movement for a parcels post.

It has the pleasure of noting a big reduction of late in the charges made by the express companies for carrying eggs and fowls.

It has opposed no other associations but has steadily urged all breeders to join both the A. P. A. as well as specialty clubs.

Its president is conducting a series of highly interesting and valuable tests—wholly at his own expense—the results of which will not be put into a "book" and sold as "secrets" but will be given freely to the public.

It does not seek members by any "circus" methods.

It has published two Year Books,

Best shaped female at Missouri State Show, St. Louis, Dec., 1909. Bred and owned by W. S. Robison, Fayette, Mo.

which may be had from the secretary for 5 cents in stamps. These books are interesting and fully explain the purposes of the association.

It does not owe a dollar to any man.

Its officers receive no salary.

You who read this—if interested in the practical side of poultry culture—

should join the association. It will pay you to do so.

Write to the secretary and enclose five 1-cent stamps for copies of the Year Books.

O. R. Easterday, Sec'y.

Portland, Ind.

BLACK ORPINGTON CLUB NOTICE!

The Australian Government Laying Contest just closed shows the Black Orpington leading all breeds in the great two-year contest, both in total number laid by the pen in two years and also for the second year of the two-year contest.

The total number laid by the winning pen of Black Orpingtons for the second year was 1,013 eggs, a number exceeding the Leghorns and other summer layers, not only in price or value of egg yield, but also in number!

In order to encourage all breeders of Black Orpingtons to join the club at once all new members joining now will have their dues credited to October 1, 1911. This includes the dates of the state fairs, at which the club will offer medals, cups and cash prizes to its members who compete as well as at the winter shows.

The dues are \$1 per year. All who want to learn of the breed should send at once for the club catalog that tells all about this great breed. Free to members; to others, 10 cents. Milton W. Brown, secretary, Station L, Cincinnati, Ohio.

Editor American Poultry Journal.

Dear Sir: Am writing you to inform your readers what I think of the organizing of the Columbian Wyandotte Breeders' Association of America. I will say I am proud of D. Lincoln Orr for starting to organize what will in the near future be one of the largest and best poultry associations in the world, because I have all the confidence in D. Lincoln Orr as a leader. He has the necessary push to make a success of whatever he goes after, and I assure you he will have some of the best, honest and far-thinking Columbian Wyandotte breeders with him. I know I am not lonesome when I say that the western breeders have not received the right kind of a deal at the hands of the National Columbian Wyandotte Club. The name is National, but is it? Well, I do not think so; it seems more like a local club. What we want is an association that will take care of all the Columbian Wyandotte breeders, keep in touch with

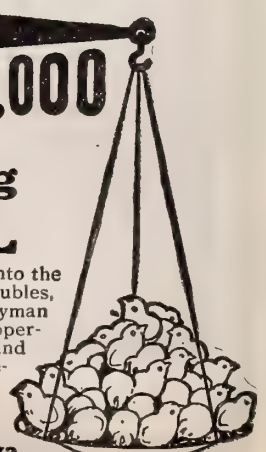

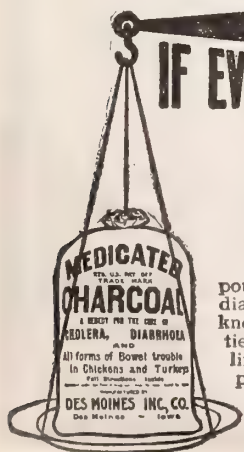

IF EVERY POULTRY RAISER USED OUR REMEDY 150,000,000

MORE CHICKS WOULD ANNUALLY BE RAISED TO MATURITY.

Save Your Chicks' Lives By Using MEDICATED CHARCOAL

We have the greatest remedy for the common chick ailments that ever went into the poultry-yard. Our Medicated Charcoal not only prevents but cures bowel troubles, diarrhoea and cholera. Charcoal alone is a valuable health-giver, as every poultryman knows. We have made it doubly valuable by giving it just the right medicinal properties. It purges, cleanses, purifies the blood, kills germs. It gives health, vigor and life to both fowls and chicks and renders them immune to disease. Carefully prepared under a scientific formula and guaranteed under the Pure Food Law. Cost is nothing compared to the good it does in saving chicks' lives. Don't fail to try it. In bags of convenient size: 10-lb. bag, \$1.00—25 lbs. \$2.25—50 lbs. \$4.25.

Des Moines Incubator Co., 269 Fourth St., Des Moines, Iowa

them, and give them all the advice possible as how to breed them successfully. The National Columbian Wyandotte Club has \$122 in the treasury; for what I do not know, but I will say it should have been spent for ribbons and other club specials. Look at some of the premium lists of poultry shows and see whether you will find any club specials such as ribbons, cups and diplomas. I am afraid you will not find any. Now the object of this new association is to place before the poultry people the good merits of the Columbian Wyandottes and keep them in the eyes of the poultry people. I know there is no better all-purpose fowl in the world, and I challenge the world to produce a more beautiful bird. Now, Mr. Breeder of Columbian Wyandottes, join a live association and you will be well rewarded. Take my word for it that this association will have some of the best and good, far-thinking breeders as office holders. They will be officers not for the money there is in the office but because they know the Columbian Wyandottes are the best all-purpose fowl, and they want everybody in the world to know it. Brother breeders of Columbian Wyandottes, just send in your name to the writer or to D. Lincoln Orr, of Orr's Mills, N. Y. All we want is your word that you want to join. No money needed until we get going. Charter membership fee is \$1. This is the chance of your life to become a member. Do it now.

In conclusion I will say, keep your eyes on the Columbian Wyandottes and on the Columbian Wyandotte Breeders' Association of America and see the result.

Wishing you all good luck, I am,

Yours respectfully,

Philip Koehlinger.

Fort Wayne, Ind.

South Bend, Ind., May 30, 1910.
Editor American Poultry Journal.

Dear Sir: I am in receipt of a letter from Mr. George P. Coffin, of Freeport, Me., saying that he will not be a candidate for re-election for the office of secretary of the Rhode Island Red Club of America.

I am sure that all who, like myself, are personally acquainted with Mr. Coffin and know his sterling good qualities, will regret that his time is so wholly occupied with other business cares that he does not feel able to attend to the duties of the office after the expiration of the present term.

I trust, however, that we may always enjoy the pleasure of having him with us at our annual meetings.

I have learned that Mr. W. F. Burleigh, of Larrabee Point, Vt. (now secretary of the National Rose Comb Rhode Island Red Club), will, if nominated, accept the office of secretary of the Rhode Island Red Club of America, and as Mr. Burleigh is a man of experience, ability, and with time to devote to the office, I trust that he will receive such hearty support at the hands of the members as to inspire him to do his best if elected.

We are certainly fortunate to have one with his experience willing to serve us, and I take great pleasure in endorsing him for this position. Yours most truly,

Irving A. Sibley.

There's one "good thing" after another to be found in A. P. J. Read it and see.

THE CORNING EGG FARM.

Doubtless most of our readers have heard of or read about the Corning Egg Book. For myself I can say that I was very anxious to visit the farm where the records were made from which the book was written, and while in Bound Brook, N. J., I went to Sunny Slope Farm, which is located about two miles out on the trolley line. There I was cordially received by Messrs. Corning and given every opportunity to inspect the plant and study their methods.

In the first place, I want to state the Corning Egg Farm is a business proposition, pure and simple, for the production of the highest possible quality of Single Comb White Leghorn eggs for market. There is nothing especially unusual there that is different from other large egg farms to the casual observer, but to the experienced breeder it is at once evident that the Cornings have an object in view and that they are accomplishing it. There are but thirteen acres in all at Sunny Slope Farm, and they are used to the very best advantage.

The birds are kept in flocks of 1,500 each in long open-front houses, and I must say they were as healthy a lot of Single Comb White Leghorns as I ever saw, and there are several thousand of them. That they get a large egg yield goes without saying. While I was there, about March 15, I saw basket after basket of the largest and whitest eggs that it has ever been my pleasure to look at. I will mention only a few things that especially impressed me, that make for the great success the Messrs. Corning have made.

Their feed room contains a 10-horse-power gasoline engine that does all the grinding and mixing of the feed and grain, and does it quickly, as it takes only one hour a day to get the feed ready for the birds, reducing the labor here to a minimum; in fact, in all the departments of the farm the labor question is right down to rock bottom, which, of course, is a tremendous saving on a plant of this magnitude.

Mr. Gardner Corning handles the incubators and the brooder house. The chicks are never handled at Sunny Slope Farm from the time they are put in the brooders until they are matured and go to the laying houses. The brooders are so arranged that the chicks can be driven from section to section, and, when it comes time to put them in the colony houses, they are driven into baskets and transported there, which prevents all injury from handling.

The eggs are gathered five times a day and always by the same person, strangers never being allowed in the laying houses. To my mind, this one thing of not allowing strangers in the laying houses is a big factor towards the large egg yield obtained there, as fowls, especially Leghorns, are quick to note strangers and are apt to become frightened, which, if they do, means a decrease in the egg yield for a day or so after. They are also liable to injure themselves if in heavy laying condition. As a rule, I think breeders are all too willing to catch and handle their best specimens to show visitors.

The average yield at Sunny Slope Farm last year per 1,000 birds was 144 for the first ten months of laying. The cockerels heading the pens are all from mothers that fully equaled that record. The pullets in the laying houses this year have so far surpassed all previous

records, and the choicest of these will be saved for next year's breeders, as nothing is saved for breeders except birds that have come through the molt in good condition and showing a vigorous constitution.

In type, Corning Leghorns have a distinctiveness all their own, being extra large, but the racy Leghorn type, the egg type, is not in any instance lost sight of in producing size. The above mentioned things are a few of the secrets (if you wish to call them secrets) of the Cornings' success. Sunny Slope Farm is an interesting place to me, and I believe to many others.

Harry M. Lamon.

When the additions and improvements now being made at Sunny Slope Farm (the Corning Egg Farm at Bound Brook, N. J.) are completed, as they will be by September, the plant, already large, will consist of three laying houses, each sixteen feet wide by one hundred and sixty feet long; one breeding house, sixteen feet wide by one hundred and forty feet long; one cockerel house sixteen feet wide by sixty feet long (this is in the center of a yard of about one acre, and is designed to carry six hundred selected cockerels, to be sold for breeding purposes); one brooder house, two hundred and forty feet long, one-half sixteen feet wide and one-half twenty feet wide, the sixteen foot half being divided in thirty-two individual hovers, with outdoor runs, and the twenty foot section is divided into twenty nurseries, with outdoor runs. On the north wall of this building is a hot water coil giving summer temperature at all seasons. Underneath this house is the incubator cellar. All incubation and brooding is done by gas, which has been piped into the building. The balance of the cellar under this building is fitted up with frames and a water sprinkling attachment for sprouting oats. With the exception of the brooder house, all poultry buildings have canvas windows, no glass being used. The workshop and graneries are centrally located and are equipped with a ten-horsepower gas engine, bone cutter, mash mixer, clover cutter, etc, with egg receiving and packing department adjoining. The colony range for growing pullets has thirty colony houses, each with six feet by ten feet floor space, front and rear walls six and five feet high, respectively. The two canvas windows in these houses open out, providing an awning for shade. The range is left in a wild state, but a luxuriant growth is produced by heavy fertilizing. This gives a great variety of rank growth, affording excellent shelter. This range is surrounded by an overhead trolley, to which dogs are attached at night, each dog covering a section of two hundred and fifty feet (the farm owning some of the finest bloodhounds in the country). The above, together with office, storage, residence and stable buildings, comprise the plant. There are at this time on the farm about three thousand five hundred laying hens, and between nine and ten thousand chicks of all ages, and all S. C. White Leghorns. The plan of breeding, from the very inception of Sunny Slope Farm has been to produce hens which would not only lay a large number of eggs, but also eggs uniform in shape and of large size.

The usual method of selecting breeders is by trap nests. Certainly the use of a mechanical device for the selection of breeding hens should long since have

been discarded, because it is impossible for the trap nests to be accurate. In every pen of laying hens more or less eggs are laid in the litter, making it impossible to know the individual hen that laid them. Again, a hen which, up to a given time, has made a wonderful record, may have an upset in her digestive organs, or otherwise, and cease laying for a time. And thus a hen whose qualifications as a breeder far surpasses another whose egg record is seemingly better, is discarded in favor of the poorer bird. It is believed at Sunny Slope Farm that as the hen is an animal she should be bred, if actual and exact results are to be obtained, as other animals are bred. This is not accomplished by resorting to a mechanical device, as a guide, but by the careful and scientific study of the animal's anatomy, and by the selection of type for the reproduction of the same type. It is impossible to produce a great performer in any line unless the animal is so built as to be capable of the performance. Sunny Slope Farm has an ideal for an egg producer, towards which it has been working from the start, and the results is now plainly in evidence in the great flocks rapidly approaching this ideal type, which is, briefly outlined, a hen with a long body, a deep keel and a general appearance of broadness as she stands with her back towards you. This is the build of hen which can be relied upon, if examination proves other points to be equal, to not only lay many eggs, but eggs of large and uniform size. The yearling hens at Sunny Slope Farm (and by a yearling hen is meant a hen which has passed through her first moult) are the only ones used, none younger are fit for breeders. The breeding house carries out the Sunny Slope Farm system of the large flock in one undivided house. By the scientific selection of hens for breeding in large flocks and mated to cockerels whose ancestors were great performers, the fertility of eggs runs very high, and from year to year the hatchability has been moving up towards the fertility, each year showing marked improvement in size of eggs, in size and vigor of chicks, and also in rapid development to the egg producing period. While in all points except size the above described birds probably more than meet all the requirements of the Standard, they would be disqualified on their weight and size. Is it not a poor Standard that puts a premium on a weakling and discards large, strong, vigorous birds, which are money-makers, and not toys?

There are many other features at Sunny Slope Farm unique in themselves, but time and space forbid further elaboration.

Gardner Corning.

A CORRECTION.

In our June issue appeared an article about the farm of the Newtown Producing Co., Newtown, Pa., in which we gave credit to Mr. F. W. DeLancy. Our attention has been called to the fact that this was an error, as the article was written by Mr. Frank L. Platt, who is connected with the Hall Mammoth Incubator Co., Utica, N. Y.

Of course an ad. in the American Poultry Journal costs a little more. The best always does. But it's the cheapest in the long run.

QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Question: (1) Should young chicks be given water at certain intervals, or should water be in easy reach all the time? (2) If buying poultry for egg production, would it be better to buy a utility pen or a prize winning pen? (3) Can you tell what is the matter with my chicks? Their craws seem to puff up, they stand around droopy for a couple of days, and then we find them dead. Am feeding "dry" food, grit and charcoal.

E. D. M.
Delaware, O.

Answer: (1) Fresh, cool water should be kept within their reach at all times. (2) The best are none too good, therefore we would advise buying from the prize winners. (3) This is due to indigestion, brought about by improper feeding the first few days after hatching. It is also caused by lice.

Question: (1) Why are there differences in the color of eggs of a flock of chickens of which all are of the same stock, and fed the same kind of feed? (2) Does the size of a turkey egg make any difference with the size of a turkey when hatched and full grown, and why? (3) Do all chicken eggs, of any of the larger fowls, average 36 ounces a dozen? (4) What is the average weight of the Mammoth White Holland turkey eggs per dozen? (5) How did the American people improve the weight of the Mammoth White Holland turkeys? (6) Is cooked groundhog or rabbit meat good

for young turkeys, the same as chicks?
Clay City, Indiana.

Answer: (1) The cause of this has never been discovered, except in theory. (2) We doubt very much if the size of the egg has any material effect on the size of the bird at maturity. The size of the bird depends on feed and care. (3) No. The average is closer to 20 ounces. (4) We are unable to say. (5) By careful selection and mating. (6) Yes.

Question: (1) In what position should eggs held for hatching be kept? Does it affect their fertility to keep them standing on end for several days? (2) Some time ago A. P. J. stated that a chick could be raised to maturity without water. How can this be done?

Denver, Colo.

Answer: (1) Eggs for hatching can be kept either on their side or standing on the small end. Where kept on the end they will not have to be turned as often as when kept the other way. (2) This statement was made by one of our subscribers, who, no doubt, can explain.

Question: (1) I am renting a place here which has a poultry house on it that measures 8x16 feet, with three windows on the south, each three feet square. Will you please advise me, through the columns of your journal, how I can make this into a fresh air

house with curtain fronts at roosts? (2) It has a ground floor which is very low and wet in bad weather. Would you advise putting a board floor in one half and a ground floor in the other half for litter? (3) How many hens would this building accommodate when confined in the winter months? (4) Will hens do as well without a male bird as with them?

Avery, Ohio.

Answer: (1) Remove the windows and in their place put muslin curtains. Roosts should be located so that no draughts will strike the birds. A drop curtain can be arranged in front of the roosts. (2) Would advise filling in so that the floor will be high enough to prevent dampness, then put a board floor over the entire space. (3) Twenty-five. (4) Yes.

Question: I have a Single Comb Brown Leghorn pullet, hatched last June, that has laid 135 eggs up to one year of age, without any forcing. What kind of a record would you call it—good, very good, or especially good? I am just a starter in breeding, therefore a reply in your journal would be appreciated.

Cleveland, Ohio.

Answer: We call this a remarkably good record.

Question: (1) Is there any remedy for bowel trouble among young chicks? If so, what is it? (2) The other day I noticed one of my hens drooping around and all her droppings clung to her feathers. I picked her up and noticed that it was full of little white worms. She died in about an hour and her comb turned dark purple. Could you tell me what was the matter, and how I can cure and prevent it? (3) How can I cure scaly leg? (4) If I let a Light

"Ringlet" Bargain Sale

For 1910 is the Event in Barred Ply. Rocks

My Special Sale List is now ready for mailing, and I am glad to offer to the people all over the world the most striking price reductions and the most emphatic bargains ever set in type.

This is now the time to call upon the almost unlimited resources of my "Ringlet" Farm and secure New York Winners and Sons and Daughters of New York Winners and birds of this New York line of blood at the marked down bargain prices.

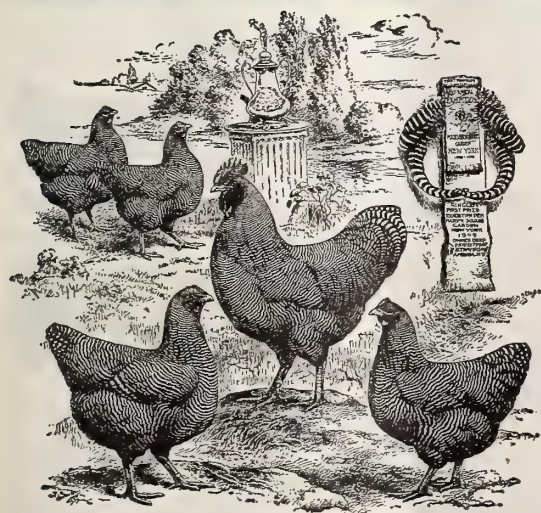

Birds bought at the prices in my Special Sale List will pay you extraordinary dividends

The list covers emphatic bargains in single birds, pairs, trios and breeding pens and lots to meet the needs of all, no matter whether wanted for fine breeding or exhibition in competition that you feel will be the strongest. They are mated by me personally; which insures the best results.

The "Ringlets" are the proud product of more than a quarter of a century of Barred Rock breeding; they have the most fashionable barring and even blue color of the present day. They sell when no others will by reason of their matchless quality. "Ringlets" are known in every land and play their part in the commerce of the world.

It will be to your interest to have this Special Sale List and take advantage of this opportunity to buy now at the cut down bargain prices. It is sound business judgement to buy what you want when offered for dollars less than it is worth—it is justice to yourself and economy. Whatever may be your wants in Barred Plymouth Rocks you will find it in my Special Sale List at Bargain Sale Figures. The List will be mailed promptly upon request.

Eggs from the World's Best Exhibition Matings. Elegant 58-page catalogue upon application.

The Buffalo Incubator

Made by

Chas. A. Cyphers

Has Made Good

THE Crystal Springs Poultry Co., Oil City, Pa., markets 75,000 ducks and chickens per annum. The following letter from them speaks volumes:

"Have just completed a hatch with the Buffalo Incubator, and beg to advise you that it is the largest per cent of fertile eggs taken off this season—ninety-three per cent.

"We have ninety-seven machines of different makes, but the Buffalo is far superior to any of them. It takes less to heat it, is more easily regulated, is scientifically simplified in every respect, and certainly far ahead of any incubator upon the market today. After my thirty years practical experience in the poultry business, I say to you, do not change it. In the Buffalo you have a world beater."—Patrick McEvoy, Mgr.

Send your order today. Prompt shipment guaranteed. State size wanted and enclose price with order. I guarantee the Buffalo in every way to be the best incubator ever offered at any price.

President Buffalo Incubator Co.
4700 Ellicott Square, Buffalo, N. Y.

Brahma hen run with a Silver Spangled Hamburg cock a week, then put the Hamburg back with Hamburg hens and the Brahma with a Brahma cock, then set the eggs from both pens, how would the cross show and when could I set them, expecting thoroughbreds? (5) Is a Brahma hen that scores 95¼ a good one, and how much is she worth? (6) Is a Silver Spangled Hamburg hen that scores 94 a good one? L. E. R. Romulus, Ark.

Answer: (1) There are several remedies, but no absolute cure. Boiled milk is good; also boiled rice to which add a liberal sprinkling of powdered cinnamon. Bowel trouble in little chicks is usually caused by feeding them too soon after hatching, or by the chicks being chilled. (2) Intestinal worms was, no doubt, the cause of the trouble. Give 10 to 15 drops of oil of turpentine in a teaspoonful of sweet oil night and morning for three days. (3) See our Hand Book for remedy. Price, 15 cents. (4) This is difficult to determine. The cross might show to a greater or less degree during the entire breeding season. (5) Yes. From \$10 to \$25. (6) Yes.

Question: (1) Will the chicks from a pullet that has had the roup have the same disease? (2) Is she fit for breeding? (3) What is the cure for diarrhoea? (4) What is a R. C. Black Minorca worth that scores 96? A Barred Rock? B. Leghorn? S. C. R. I. Red? Sidney, O. M. H. J.

Answer: (1) Yes. (2) No. (3) A teaspoonful of sweet oil every four hours and feed with crust of bread scalded with boiling milk. In severe cases a pill containing 1 grain each tannic acid and opium. (4) Any fowl that will score 96 honest points is worth all the way from \$25 up, depending on the breeding back of the specimen.

Question: Please let me know in your next issue which are the best turkeys to raise on a farm in regard to weight, White Holland or Mammoth Bronze? Central Lake, Mich. M. D.

Answer: These are both very large breeds, but we prefer the Bronze.

Question: I have some very fine White Orpington hens that are giving excellent work as layers. Twice within the last ten days, in going into the hen house in the early morning, we have found eggs on the drop board, broken, which had evidently been laid during the night or early morning. What would cause the hens to do this. A. J. S.

Gooding, Idaho.
Answer: This happens very frequently where the hens are laying extra well, and is caused by inflammation in the egg passage. Feed plenty of green food, also some wheat bran and stale bread soaked in sweet milk.

Question: What is a year old Single Comb Brown Leghorn cockerel's value that scored as follows: 95 by Judge A. C. Le Due, 93 by Judge W. S. Russell, 93¼ by Judge Thos. S. Falkner? E. M. Spring Grove, Ill.

Answer: We cannot put the value on a bird by the score, or at least until we knew in what sections the cuts were made.

Question: (1) Will the Buckeye cock and Leghorn hen make a good cross? (2) Is this a good time to mate them

Hanlon's Buff Leghorns & Black Orpingtons

Produces the winners. A few extra choice Black Orpington cockerels for sale. Eggs, best pens, \$5 per 15; \$9 per 26. Philip Hanlon, Jr., Watertown, New York

ELGIN, ILL.

for fall hatching? (3) How often should little chicks be fed with free range after two weeks old? (4) Is it necessary to feed shells and cut meat to get good egg results at this time of season if chicks have free range?

Henryetta, Okla. J. W. W.

Answer: (1) No. (2) Yes. (3) Four times a day until they are six weeks old, then three times a day. (4) No.

Question: What feed is the best between beef scraps and fresh-cut green bone? What proportions should they be fed and how often for laying hens and growing stock?

Galveston, Texas.

Answer: We have just as good results with the one as the other. In feeding green cut bone, allow about two ounces to each fowl three times a week. In feeding beef scraps our method was to keep it in hoppers before the birds at all times, both old and young stock.

Question: Pleased to see published in your Query Box department of the first issue the defect in a White Wyandotte chicken with a single comb, and should there be a change after the chick gets older, as it is only about six weeks old, and these eggs were bought from a reliable breeder who makes a specialty of this kind of poultry?

Thomasville, Pa.

Answer: This is a disqualification. The comb will not change after the bird gets older.

Question: What was the matter with my Buff Rock hen? She was lame for two or three months, stopped laying about three days and then died. I cut her open and found her liver swollen twice its natural size and all full of white pimples.

Freeland, Pa.

Answer: Liver trouble. Procure a copy of our "Poultry Doctor." It will give you full information and remedy for this and all other diseases of poultry. Price, only 50 cents.

Question: (1) I purchased a Barred Rock cock from a poultryman last fall, paying a good price for same. He seemed to be all right. He is a fine looking bird; seems to be very vigorous and always working. I mated him with nine mature Barred Rock pullets. I set eggs from these pullets and never got a chicken. I examined the eggs and found them not fertile. (2) If cock's fault, is there any remedy?

Decatur, Ill.

Answer: (1) This is evidently the fault of the male. It sometimes happens that a vigorous looking male is of no use as a breeder. There is no remedy that we know of.

Question: (1) I had a Brown Leghorn hen that one side of her head swelled up, blinding her in one eye, and she had some substance in her mouth that kept her from closing her mouth, and I had to kill her to cure her. What was the matter with her? (2) Does a Leghorn lay a large egg? (3) Is a cock that crows loud and often and always busy a good bird to breed from? (4) What is the cure for a bird when it sneezes?

Homestead, Pa.

R. W.

Answer: (1) Roup and canker. See remedies advertised in these columns. (2) Medium size. (3) Yes. (4) This is caused by a cold. A 2-grain quinine capsule will usually check it. Our book,

Buff & Black Orpingtons & S. C. & R. C. Reds

Postively the GREATEST BARGAINS ever offered in the above varieties. Our show birds and grand breeders now half price to clean, up quickly and make room for our 1000 head of young stock. All eggs half price. If you intend buying any of above varieties you make a mistake if you don't write us today.

March catalogue just issued.

Send for it today. : : :

Oakes Mfg. Co., Box B, Tipton, Indiana

"Poultry Doctor," will give you full information about all poultry diseases and remedies for them. Price, 50 cents. For sale by us.

Question: (1) Is corn ensilage good to be fed as a green food in winter? (2) Of what does animal food consist? (3) Are Single Comb Buff Leghorn eggs harder to hatch than the other breeds?

Groverstown, Ind.

R. H.

Answer: (1) We have no data as to the value of this as green food, but in our opinion it is not. (2) The flesh of animals, bugs, insects, worms, etc. (3) No.

Question: (1) Please tell me the best and cheapest way to feed young chicks till they are two months old? (2) How old should chicks be to be fed oats? (3) Is hulled oats, ground, a good feed for very young chicks? (4) In starting stock with eggs, only one kind to be raised, is it best to get eggs from the same or different places? (5) Should cockerels and pullets from the same strain be bred together the first year, or should I get cockerels from another strain. (6) Do you consider Buff Orpingtons a good fowl to raise on the farm for market and egg production?

Core, W. Va.

Answer: (1) Our Hand Book will give you this information; price, 15 cents. (2) Sprouted oats may be fed after they are a week old; whole oats after two months. (3) Yes. (4) The foundation stock should all be secured from one source. (4) Procure a cock bird of the same strain to mate with your pullets. (5) Yes.

Question: Will you please inform me in your next issue if 20 pullets and two cocks of the Minorca breed will make fertile eggs in a pen 20x50 feet, with every feed given them that they require?

Kansas City, Mo.

F. A. B.

Answer: These would probably do better if separated into two pens of ten females and one male, as it frequently happens that where two or more males are in the same pen they fight more or less and will not give the females the attention necessary to produce fertile eggs.

Question: (1) Will any variety of Cochins lay as many eggs on an average the year round as the smoothed legged variety of fowls, such as Plymouth Rocks, Orpingtons, etc.? (2) Will Columbian Plymouth Rocks bear their markings perfectly to their offspring? (3) Will a Partridge Cochins or Partridge Plymouth Rock breed true to color?

Honaker, Va.

Answer: (1) No. (2) Yes, if properly bred and mated. (3) Both of these varieties breed very true to color and especially the Cochins.

Question: I would like to have you tell me, through your Question and Answer Department, what is the matter with my chicks. They are troubled with some kind of bowel trouble, and will appear well one day, but by the next they are drooping around and are generally dead by the next morning. Their droppings do not drop off, but ball up around the vent. I did not hatch these chicks, but bought them from a party in New York state. They are a little over a week old now. These chicks are housed in a fireless brooder and are fed johnny cake, dry

After "Sousters"

A pan full of disks the maker says "souse as one piece."

"Sousing" or rinsing complicated cream separators is both unsatisfactory and unlawful, for laws are being passed to stop it.

Here is the South Dakota law:

"Cream shall be unmerchanted for buttermaking if it has been skimmed by a filthy, unclean, unsanitary or unwashed separator."

Other states are passing similar laws. Makers or agents who advise "sousing" are willing to make a law breaker of you, to cause you the loss of your cream, or make you liable to fine or imprisonment, in order to sell you a complicated machine. Wise dairymen let disk-filled and other complicated machines alone. They prefer simple, sanitary, easy to clean.

Sharples Dairy Tubular Cream Separators

for Dairy Tubulars have neither disks nor other contraptions, yet produce twice the skimming force of common separators. The World's Best. World's biggest separator works. Branch factories in Canada and Germany. Sales exceed most, if not all, others combined. Probably replace more common separators than any one maker of such machines sells. Write for Catalogue 205.

The only piece inside Dairy Tubular Bowls.

CHAS. L. STILES
33 Columbia Bld. COLUMBUS, OHIO.

bread crumbs and rolled oats, with chicken feed, in the litter. Is this disease hereditary, and what is its name and cure? F. W. S.

Coudersport, Pa.

Answer: This is what is known as "white diarrhoea." It is caused by the chicks being fed too soon after hatching, by improper feeding or by the chicks getting chilled. There is no absolute cure for it, but very good results may be had by giving boiled milk to drink and boiled rice to eat, to which has been added a liberal sprinkling of powdered cinnamon. Our book, "Poultry Doctor," will give you a vast amount of information about poultry diseases and remedies. Price, only 50 cents.

Question: Are White Rocks that are line bred to conform close to the standard more delicate and less vigorous than those that are not inbred or so-called line bred? M. E. J.

Cambridge, Ill.

Answer: This depends upon the way they were line bred; if properly mated they are just as vigorous as those that are not line bred.

Question: (1) I am a blacksmith and horseshoer. Can I use the fresh hoof trimmings instead of green cut bone, or can I feed them to any advantage at all? (2) I have an incubator with walls $1\frac{1}{2}$ inches thick, outside board $\frac{3}{4}$ inch, inside casing $\frac{3}{8}$ inch, $\frac{3}{8}$ inch air space lid 1 inch thick. Is this a faulty machine? I can not get good hatches with it. M. B. M.

Cave City, Ark.

Answer: (1) These are of no value as a chicken feed. (2) Do not think the incubator is at fault.

Question: Will you please inform me, through your question and answers in the American Poultry Journal, how to make young chicks, raised in a brooder, roost? J. N.

West Orange, N. J.

Answer: Young chicks should not be allowed to roost too soon, as this will result in deformities. Nature will tell them when it is time. You provide the roosts and the chicks will do the rest.

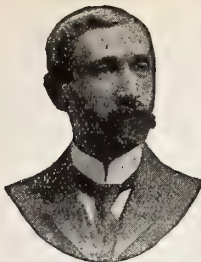

Question: We have 25 mixed hens in an orchard of low peach trees. In the spring they cleaned the lower part of the trees of leaves and blossoms, and later on would get in the trees and eat the little green peaches. Some days we get two or three eggs and some days none. Does peach leaves, blossoms and peaches check laying? They are fed twice a day on corn, wheat, oats and maze. We furnish them with good water, lime and oyster shells. They have a good coop. They are not overfed. Granite, Okla. Mrs. J. W. D.

Answer: Do not believe that the peaches have anything to do with the poor egg yield of your fowls. It may be due to a lack of animal matter. Feed some fresh meat or liver about three times a week, about two ounces to each bird.

Question: I have had many chickens between three and six weeks of age get droopy, then grow smaller and weaker and finally die, so decided to cut into the intestines and found many hair-like worms. Please give me the cause and remedy. Mrs. J. H.

Little Rock, Ark.

Robert H. Essex

Earth—on the green grass if possible; let them hunt up bugs, worms and flies. If the weather is dry or insects few, get MODEL NUTRINE CHICK SALTS, which fulfills every need for animal and mineral food; builds bone, sinews and produces feathers. Nutrine Salts by aiding digestion, prevents diarrhea and "going light" in chicks. These Salts are not a purgative, but a tissue builder, and a wonderfully effective food-salt. Costs five cents a week for fifty chicks. A dollar or so spent now on Lice Dust that is really good, Lice Spray that is really effective, is the best investment you can make. Start your chicks right and see that you get the best goods for your money. Model Supplies are Superior. See list below.

Model Incubators, Brooders and All Kinds of Poultry Supplies

IF YOU USE CARE in choosing your supplies, you not only save money, but save chicks. Let your Food Holders and Wall Founts be of good, heavy galvanized iron and well made, especially when they cost no more than the low-grade kind; and above all, be sure to Get a Brooder That Broods—one that can be depended on to hold an even temperature and to keep your chicks warm; a brooder that provides healthful, fresh atmosphere. MODEL BROODERS are so constructed that nothing is left to chance. Yet they are reasonable in price. I you knew how many chicks are saved by their use, and how well the chicks thrive in them, you would use no other. Our free catalogue tells you all about the different sizes, from our \$6.00 Portable Hoyer to our Unequalled Model Colony Brooder at \$15.00—the cheapest, the best on earth for raising chicks. Model Incubators are equally well made. They are used by Successful Poultry Keepers, Experiment Stations and Big Poultry and Duck Farms.

THE PARK & POLLARD CO.
30 CANAL ST. BOSTON, MASS.

ens are very common. In fact, worms in small quantities inhabit the digestive organs of all fowls and animals without causing them serious inconvenience. An epidemic of worms in a flock of fowls may be caused by the fowls being fed too much meat or it may be caused by the condition of the ground on which the fowls are kept. Worms are contagious in that they are transmitted from fowl to fowl by being deposited on the ground by one fowl and taken from it by another. There are a number of remedies, but we believe the most simple is oil of turpentine. Give from ten to fifteen drops of oil of turpentine in a teaspoonful of sweet oil night and morning for three days. Food should be withheld for three hours after the administration of worm medicine, and then a warm, soft meal should be allowed. Continue this diet for a couple of days. Care should be taken that all worms expelled be destroyed.

Question: Will you please advise me in your next issue which of the following would make the best utility fowl, which would be the best winter layers, the Black Langshan, Black Orpington or Black Javas?
L. S. Avery, Ohio.

Answer: These three varieties are all considered good winter layers. The Black Javas, of course, are not as popular as the other two varieties, but are considered an elegant utility fowl. We don't believe, however, there is much difference in the three varieties as far as utility and winter eggs are concerned.

Question: Has the American Poultry Association published a Standard of Perfection since 1905; if so, is it for sale, and where can I obtain one?
Thurmont, Md. F. V. A.

Answer: The American Poultry Association has not published a standard since 1905, but they are now at work upon the 1910 edition, which will be out this fall. Final action will be taken on this edition at the next annual meeting at St. Louis in August. We are now booking orders for this edition, to be delivered as soon as completed. Orders will be filled in the order they are received. First come, first served. Get your order in now. Price, \$1.50.

Question: (1) How would it do to put litter on the floor of a hen house and use dropping boards and take them out in the morning and use it for scratching pen in the day time? (2) How can I mate S. C. White Leghorns in order to get pullets or cockerels?
Gastonia, N. C. W. P. G.

Answer: (1) This plan is all right. (2) This cannot be done.

Question: Will you kindly tell me, through the columns of your journal, what, when and how much to feed chicks that are about one month old till they are fully developed? I have reference to chicks intended for breeding purposes. Also is lettuce a good green food for them? Also tell me what to feed chicks the first four weeks.
Egypt, Pa. H. B. D. M.

Answer: Any of the prepared feeds now on the market will do the work and are about as cheap as though you mixed them yourself. Lettuce is an excellent green food for chicks. Our Hand Book of Useful Information contains formulas for preparing feeds and

AUTOMATIC HATCHING CO., Holly, Mich.

much other valuable information. Price, 15 cents.

Question: (1) Is it necessary to stop pullets or hens laying when conditioning for show? If so, how may it be done best? (2) Can birds that have been laying for a month or two before show time be brought into as good condition as if they were just starting? (3) Will a hen that has been laying all winter be in good condition for breeding in the spring? (4) Generally when breeding from a pen of birds of a good strain that have won first at the biggest of shows, is it necessary to raise 100 or more chicks to get another pen of equal merit as their parents? I have heard, when breeding from high scoring birds, only about one out of every twenty raised will equal the old ones in quality. Is this correct?

Homestead, Pa. R. B. F.

Answer: (1) Yes. By changing their feed and moving them to another location. (2) No. (3) Yes, if she has the proper care. (4) As a rule, the percentage of first-class show specimens is small, but the percentage of first-class breeding birds should be large, providing the stock is good and has been properly mated.

Question: (1) Can you tell me in your next issue if eggs shipped from Iowa will be all right? They have to be sent to Portland, then by boat to Coos Bay. And how long will it take? (2) Do you know if there is a good Brown and Buff Leghorn breeder and White Orpington breeders in California or Oregon, or nearby state? (3) Would sawdust be good for litter under roosts? (4) Can chicks be shipped here all right? (5) How late do poultrymen keep eggs for hatching? I would like to keep my incubator going the year round, if possible.

W. J. A.
Daniel's Creek, Marshfield, Oregon.

Answer: (1) Eggs can be shipped almost any distance if properly packed. We are not familiar with the location of Coos Bay. (2) There are a number of good breeders of these varieties on the coast. Get a copy of the Pacific Poultryman, published at Seattle, Wash. (3) Sawdust does not make good litter. (4) Yes. (5) Some breeders can supply you with eggs for hatching at all times of the year.

Question: (1) What caused the eggs to be infertile the first time? (2) Why do you think the eggs are so small? (3) Will those chicks be crossed or mixed with the Rocks? (4) What caused the eggs to be infertile the last time? (5) Is a 7-pound R. I. R. cockerel too heavy for breeding purposes?

W. H. R.
Boonville, Ind.

Answer: (1) No doubt the fault of the male bird. (2) The pullets did not mature properly. The eggs will be larger next season. (3) some people claim they will be; others that they will not. Our opinion is that they will not. (4) We are unable to say. (5) No.

Question: (1) Do chickens that are of the same breed lay eggs of uniform color? (2) Do R. I. Reds lay white and colored eggs?

G. W. S.
Ambridge, Pa.

Answer: (1) Yes, as a rule. (2) The R. I. Reds, as a rule, lay a brown egg, although some are lighter in color than others.

Question: (1) I would like to know

GOLDEN LACED WYANDOTTES

The Owen Company

South St. : Allegan, Mich.
Incubators, Brooders, Shipping Coops, Exhibition Coops

the best feed for young chicks. (3) What is the best cure for gapes, and how to use it? (4) What is a good food to feed laying hens in summer time that are penned up, and should the same be fed when they have free range? (5) What is the best way to break up setting hens? (6) Is it a good plan to use Pratt's Regulator or some other regulator in chicken feed after they are three or four days old, and how much? (7) Should beef scraps be fed to little chicks, and at what age, and how often? (8) At what age should charcoal and oyster shells be put before chicks? (9) Is lettuce all right to feed to little chickens for green food, and at what age should it be fed? Kindly let me know when my year is up for the Journal.

H. F.

New Alexandria, Ohio.

Answer: (1) No. (2) Any of the prepared chick feeds now on the market will do the work. (3) There are several gape cures advertised in these columns. Also in our Hand Book. Price, only 15 cents. (4) Whole wheat and oats and plenty of green food. The same feed can be used when they have free range, but not as large quantities. (5) By confining them in a small slatted coop for a few days. (6) We have never used any regulator, so we are not in a position to say. (7) Beef scraps may be kept before little chicks at all times after they are 10 days old. (8) After they are a week old. (9) Lettuce is one of the best of green foods for little chicks and may be given after they are three days old.

Question: Sprouted oats is said to be very fine food for chickens. Why not also sprouted corn? Sprouted wheat? Sprouted barley? Is Hairy Vetch in the green state good for chickens to graze on? Is the green pea of the Hairy Vetch good for chickens? Chickens are very fond of green rape. Is it good for them?

W. M. J.

Rusk, Tex.

Answer: Corn, wheat and barley cannot be sprouted as successfully as oats. Any green food that fowls will eat is good for them and rape is exceptionally so.

Question: (1) I am breeding the S. C. R. I. Reds, this being my first year in the business. I have about 240 chicks, all healthy and very strong. There are three of this number that tremble or quiver continuously. (2) Is cheese or curd made from sour milk good for chicks? (3) I have a fine male bird and hen, each having a rattling in their throats. What is the cause and will it terminate in anything serious in the future? (4) When a person is breeding utility stock, is it necessary to also keep a few fancy birds to exhibit and advertise the business, or not? (5) What shall a person do to have their birds scored, or, how must they go about it? (6) Which is the cheapest and best way to ship eggs for hatching? (7) How can one dispose of his surplus stock and culls without other people taking advantage of getting same cheap at market prices, etc.; in fact, cheaper than a breeder could sell them? (8) Will one thickness of tongue and grooved boards be enough for siding to keep chicken houses warm? (9) Where can I secure some good plans for building poultry houses for young chicks and laying hens, etc? (10) What is the cause of some of my hens losing their feathers from the top of their heads,

rendering them bald? (11) Last winter some were troubled with sores on their faces and heads. Some pronounced it chicken-pox?

M. M. B.

Owensville, Ohio.

Answer: (1) This is a nervous affliction. There is no cure, but they may outgrow it. (2) Yes. (3) This is probably a little touch of bronchitis. Put a few drops of carbolic acid into a kettle of boiling water, hold the head of the fowls over the kettle and allow them to inhale the steam and fumes. A few treatments will usually suffice. (4) Yes. (5) Exhibit at some show where the judging is done by score card, or have some poultry judge come to your place and score your birds. (6) By express, packed in baskets. (7) Your culls would not do anyone any good, and your good surplus stock you can dispose of by advertising in poultry papers. (8) Yes. (9) Our book, How to Build Poultry Houses, will give you the necessary information. Price, 50 cents. (10) This is usually caused by the male bird, but sometimes by the depluming mite. Use sulphur ointment on the bare places. (11) This was no doubt chicken-pox. You should thoroughly disinfect your place with a 10 per cent solution of carbolic acid to avoid another attack.

Question: (1) Do you think a record of 776 eggs from fifteen Rhode Island Red hens for the five months from December to April, inclusive, a good one, with one hen setting from the 1st of April? (2) One of our hens has great loss of appetite and flesh; also has diarrhoea and droops around all the time. Could you tell us what her trouble is, and what remedy would you prescribe?

G. M.

Perrysburg, O.

Answer: (1) This is not a very good record, as this includes two of the best laying months of the year. This is only an average of a trifle over ten eggs per month per hen. They should have made an average of at least fifteen eggs per hen. (2) This is probably due to liver trouble. Get a copy of our Poultry Doctor for full information about this disease. Price, 50 cents.

Question: (1) Are sunflower seeds suitable food for laying hens? (2) Should Anconas have light or dark colored legs? (3) Are mottled legs an objection in Anconas? (4) Where can a book on judging different breeds be obtained—one that will give authentic information on color, form and general requirements of the show room? (5) Can you give me the addresses of some of the reliable poultry Journals published in Canada? (6) How long can eggs for hatching be kept? (7) What is the best form of packing for eggs to be saved for incubation?

W. H. B.

Brownlee, Sask.

Answer: (1) Yes. (2) Yellow, or yellow shaded mottled with black. (3) No. This is permissible. (4) The American Standard of Perfection is the only authority. The new edition will be out this fall. We are now booking orders for it, and all orders will be filled in rotation. Order now. Price, \$1.50. (5) Canadian Poultry News, Owen Sound, Ont.; Canadian Poultry Review, Toronto, Ont. (6) Best results will be obtained when eggs are not kept over two weeks, but they may be kept much longer. (7) Eggs for hatching purpose should be kept in a dark, cool place, and spread out on trays so that they can be turned each day.

DIFFERENT ABODES OF MAN.

Far off in the frigid zone the Esquimaux builds his house or igloo from blocks of snow. When the short Arctic summer arrives and the sun's rays melt the roofs, the Esquimaux abandons his home.

In the South Sea islands the natives tharch their mud huts with reeds and cane brake. This affords protection from the intense heat of the tropic sun, but when the heavy rains set in it is frequently necessary to build several new roofs in a season.

Among civilized people where permanent and substantial homes are established, it was necessary to get a roof for the home that would withstand the changes of temperature and weather and the fury of the elements.

Various materials have been tried for this purpose, but none seemed to meet the demands until the discovery of the famous Genasco Ready Roofing.

This roofing is made from natural asphalt taken from Trinidad lake on Trinidad island, off the coast of South America. The fact that this asphalt for hundreds of years has withstood the ravages of time and the elements proves its absolute durability.

It is only after years of careful study and experiment that the Barber Asphalt Paving Company, Philadelphia, finally placed Genasco Ready Roofing before the public, and its success was so remarkable that it is now found in almost every quarter of the globe.

But strange to say, despite the advance of modern progress and the perfection of Genasco Ready Roofing, there are many otherwise progressive and up-to-date farmers who, every year, are doing much as the savage in the South Sea islands—going out mending leaks and repairing damage done by faulty and defective roofs.

It is estimated that half the waste and expense caused by defective roofs would cover the cost of a good, sound, permanent roof of Genasco.

IMPROVEMENTS IN CAPONIZING.

Poultrymen throughout the country are very much interested in the caponizing instrument illustrated herewith on which recently there was issued by the United States patent office a patent to Geo. P. Pilling & Son Company of Philadelphia, Pa. With this instrument it is claimed that caponizing is much easier done. The demand for capons is so rapidly increasing that every poultry raisers should caponize all his surplus roosters. It is a well known fact that capons bring nearly double the price per pound than the uncaponized fowl, also by caponizing the fowl it becomes nearly double in weight.

Caponizing is easily learned by little practice. The beginner must go slow at first and learn it just like the use of any other implement. A professional caponizer in New Jersey operated on nearly sixty thousand fowls last year. People who saw him caponize state that with an assistant he can caponize a fowl in a half minute. This is most unusual, but it is very easy for all to learn how to caponize and do it in a reasonable time.

We advise all our readers to write to G. P. Pilling & Son Company, Philadelphia, Pa., mentioning this paper for their caponizing pamphlet. It will be sent free of charge to all our readers who will request it.

YOUNG MAN WANTED.

Undersigned knows of a situation for a beginner in the learning of the poultry business. It is on a farm where all the popular varieties are bred, where everything is ship shape, good board, family treatment, fair wages and a steady increase as the beginner earns it. The learner must be honest, steady, of good morals, willing, and one who in time will make a partner. German is preferred. Write me. A. D. Burhans, Waterville, Minn.

The magazines have lots of articles on "Economy in Dressing," "Dressing on Dimes," etc., etc. They describe the styles but none of them ever tells what materials to get, and it's the material that costs. Do you know any dress stuffs that are pretty, and really cost dimes, not dollars?

ECONOMY.

You can purchase as pretty designs and stylish-looking goods in Simpson-Eddystone Prints as any one can wish and their cost is extremely moderate when you consider their substantial quality and attractive appearance. Their greatest economy is in their non-fading colors and durable material, which makes them wear unusually long. I'm sure you will be delighted with them.

Monmouth Poultry Yards, Freneau, N. J., are offering for sale some of their New York and Boston prize winners, also some grand utility stock at right prices. They breed the noted Monmouth strain of S. C. Buff and White Leghorns. Write and mention A. P. J.

Dr. G. W. Taylor, Orleans, Ind., the well-known Houdan breeder, has just issued his special annual sale list, and he is certainly offering some great bargains in both stock and eggs. Better send for a copy of this list and take advantage of some of these bargains.

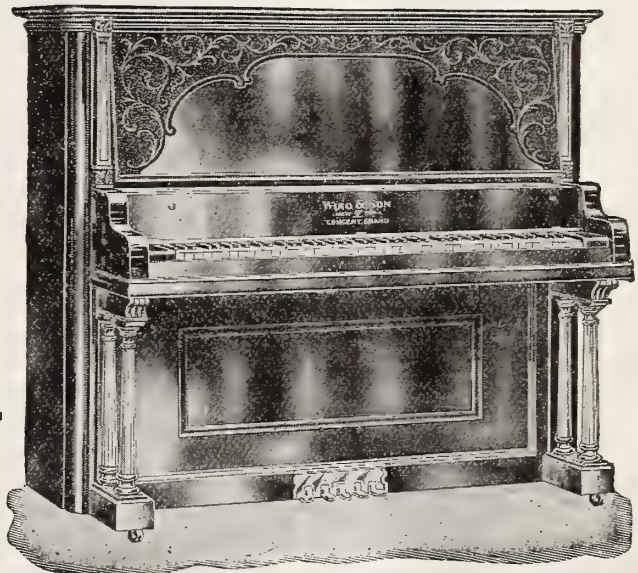

Saturday, May 28, a party of twenty-five or so students of the Department of Poultry Husbandry of the New York State College of Agriculture, Cornell University, visited the farms of W. B. Candee and several other well known central New York poultry raisers and fanciers and inspected the methods of breeding, incubating and brooding being employed. The party was in charge

of Prof. J. E. Rice, the head of the poultry department of the Cornell institution. At the Candee farm the students were shown through the new factory, just recently completed for the Candee Incubator and Brooder Company. They were greatly interested in the new incu-brooder being turned out under the Candee patents and expressed no little surprise at results already attained with the new machine. A thorough inspection of the 10,600 egg machine in use on the farms was made.

Professor Rice, who has for a long time been an ardent admirer of the Candee hot water brooder system, was very warm in his praise of the new machine, and he predicted for it a phenomenal success.

Chas. G. Pape, Ft. Wayne, Ind., who breeds Single Comb Black Minorcas that are noted for their great laying and exhibition qualities, has several choice pens and some good yearling hens that he is offering at bargain prices. Write him and mention American Poultry Journal.

Rock-Bottom!

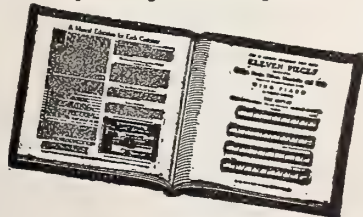

Yes, Rock-Bottom Prices and on a Piano of the HIGHEST Quality

Let us quote you the most astounding prices ever offered on pianos of unexcelled quality. The very rock-bottom prices—prices that would mean ruin to the local dealer or the mail-order houses that buy their pianos from the manufacturer. You will be amazed at the direct-from-the-factory prices on the well-known Wing Piano. We will positively save you from \$150 to \$250 on the purchase of a piano of highest quality, recognized merit. We offer to convince the purchaser by shipping your choice of a piano on approval, all freight prepaid, no money down—absolutely free trial—a four weeks' free trial. **Remember: all freight charges prepaid, no matter whether you keep the piano or not.**

Send for Book of Information FREE! the best, safest, most instructive book of piano-buying information ever compiled; the

Would you like to know all about pianos, how they are made, how to judge the fine points of quality and price in buying a piano? Then send the coupon for the piano book which we are sending out FREE for the present—the book is free.

The Coupon Brings this 156-Page Book Free

formation that may mean hundreds of dollars to you, whether you buy a piano now or later. Put your name on the coupon and mail it to us AT ONCE.

WING & SON, Est. 1868, 373-386 W. Thirteenth Street, New York

So many of the new style Wing Pianos are getting into homes where the people buy for all cash, that dealers are trying to tell it around that Wing & SON REFUSES to sell on time. This is not true. We sell for cash OR on VERY, VERY EASY PAYMENTS just as YOU choose after your four weeks' free trial. And many of our wealthy men are buying Wing Pianos right now on our easiest monthly payment plan.

Every discount goes direct to you

The Wing Piano stands alone—sold direct from the factory—the only one sold direct from an exclusive piano factory without going through the hands of a single middleman.

When you buy a Wing Piano you pay no salesman's, dealers' or middlemen's profits. You pay no commission to music teachers and supposedly disinterested friends. We cut out all middlemen and you put the discounts in your own pocket. The piano book tells how to save from \$150 to \$250!

This book (156 pages) tells all about material, manufacture, assembling, patented devices and what they do, all about soundboard, action, case, in fact every detail connected with the production of a fine, high grade piano. You will be astonished at the amount of information about piano quality and piano prices, and how to avoid the deceptions of piano salesmen. The New York World says, "A book of educational interest everyone should own." With this book we send our direct-from-the-factory prices on Wing Pianos.

Send Coupon or a letter or postal NOW. Don't miss this opportunity to get the very latest and best piano in.

Hot, Filthy Water

Will Kill Your Chicks

By using Weldon's Poultry Fountain you will keep the drinking water cool, sweet and clean. The chicks will not drink so much, because the sun cannot heat it up and it cannot become filthy.

You Will Raise One-Third More Chicks

Remember, it's not what you hatch but what you raise that counts, and one chick lost that would have been a prize winner would pay for a dozen fountains. Send for our free book giving full information.

MAUD MULLER IN THE CITY.

Maud Muller on a summer's day
Set a hen in a brand-new way.
(Maud, you see, was a city girl,
Trying the rural life a whirl.)
She covered a box with tinsel gay,
Lined it snugly with new-mown hay,
Filled it nicely with eggs and then
Started to look for a likely hen.
Out of the flock selected one,
And then she thought that her work was done.

It would have been, but this stubborn hen
Stood up and cackled "Ko-doot!" and then
Maud Muller came, and in hurt surprise
Looked coldly into the creature's eyes:
Then tied its legs to the box. "You bet
I know how to make you see."
But still it stood, and worse and worse
Shrieked forth its wrongs to the universe,
Kicked over the box with tinsel gay,
And ignominiously flopped away.
Then a bad boy, over the barnyard fence,
Te-heed: "Say, Maud, there's a difference
'Tween hens, you know, and it is that
One says 'Ka-doot!' and one 'Ka-dat!'"
Then Maud recalled that the ugly brute
She tried to set had said "Ka-doot!"
And ever since that historic day
She blushes in an embarrassed way
To think of the bobbie she made once when
She tried to set a gentleman hen.
—Victor Murdock in Wichita Eagle.

C. L. PENSYL SELLS HIS NUGGET
BUFF PLYMOUTH ROCKS.

The Standard Plymouth Rock Farms, Constantia, N. Y., having recently purchased the entire flock of the Nugget Poultry Farm, C. L. Pensyl, proprietor, wish to call the attention of the public once more to the merits of their Nugget Buff Rocks.

There are now in their yards fifteen New York winners, besides many others from Philadelphia, Indianapolis, Scranton, etc. Their flock of young birds number between 1,200 and 2,000. No birds are permitted in their breeding pens which have not first-class shape, color and head points. At the recent New York show the winnings of this flock were: 1st cockerel, 1st pullet, 2d cock and three club specials.

The equipment of this plant is down to date in every respect. For instance, their breeding pens are equipped with 120 trap nests of the most approved type, which are used the year around; each pen has two large grass runs; the brooding house is modern in every feature; and all young stock has abundance of range.

We may well add that the entire time and service of two are given over to the rearing and care of the Nugget Buff Rocks for exhibition purposes. It is with pleasure that we suggest that all interested in Buff Rocks write this firm regarding their stock.

CERTIFICATE OF SALE.

Bloomington, Pa., May 19, 1910.

This is to certify that I have this day sold and shipped my entire flock of Buff Plymouth Rocks to the Standard Plymouth Farms of Constantia, N. Y.

This sale includes all young and old birds and the entire business. I agree not to breed, sell or exhibit this variety in the future and will not offer for sale any eggs of this variety.

All correspondence inquiring for birds or eggs of this variety will be forwarded to the above firm.

I recommend all my customers to this firm, for I have found them gentlemen and thorough fanciers and I feel confident in saying that they will use all customers right and from their present flock should be able to supply any order in Buff Rocks.
(Signed) C. L. Pensyl.

A SATISFIED CUSTOMER.

Sparks, Okla., June 4, 1910.

W. P. Smalley, Shawnee, Okla.

Dear Sir: The trio of White Wyandottes arrived in good shape: both hens layed yesterday and today. Every one that sees them thinks they are the finest chickens they ever saw. After seeing several different flocks and having several catalogues of some of the best breeders, I think it the best \$75 I ever spent. No doubt you have the best Wyandottes in the Southwest, and with such foundation stock as this I think I will get my share of premiums at the shows next year. Yours truly,

C. O. Shanteau.

The annual spring sale catalogue of the Sunswick Poultry Farm, South Plainfield, N. J., is now ready for distribution. If you want a bargain in Single Comb Buff, White or Black Orpingtons you will send for a copy at once.

CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

WHITE ORPINGTON EGGS FOR HATCHING. Pen No. 1 headed by that grand big cockerel that won 1st at the great 1910 Philadelphia Show. This cockerel is a wonder in type; big, broad, long back; deep, full breast; extra short shank, and is the best White Orpington I could buy at any price. Mated to four hens that I believe are equal to any four hens owned by any one breeder in America. They have the true Orpington shape, very deep bodied, deep full breast, extra short in shank. Will spare a few settings from this grand pen at \$10.00 per 15 eggs. Pen No. 2 headed by one of Mr. Kellerstrass' best birds, mated to ten extra low down, grand type hens, the kind you are all looking for. Eggs from this pen, \$3.00 per 15 eggs. I paid Mr. Kellerstrass \$30.00 per setting for these same eggs. Ten years a breeder of Real Orpingtons. Member National White Orpington Club. Member first Orpington club of America. Ed. Biederstadt, Majestic Theatre, Madison, Wis. 5-3

KELLERSTRASS WHITE ORPINGTONS—wonderful layers; 15 eggs \$2.50. Mrs. John Stokes, Route 4, Kankakee, Ill. 5-3

HAMMETT ORPINGTON FARM, Buff, Black, and White Orpingtons, stock and eggs a matter of correspondence. Chas. Hammett, Mgr., Mansfield, Ohio. 6-1

WORLD'S BEST ORPINGTONS. White, Buff, Black, Single, and Rose Comb. Winners of over 1,200 prizes at America's best shows. Catalogue. We can start you right with chicks or eggs. J. S. Haupt, Box 97, Fairview Farm, Easton, Pa. 5-3

SINGLE COMB WHITE AND BUFF ORPINGTONS—Byers and Kellerstrass strain. Fine young stock and eggs for sale at reasonable prices. Also Light Brahmas, cockerels and pullets, for sale from first class stock; eggs in season. Write me your wants; satisfaction guaranteed. M. J. Thompson, Buena Vista, Allegheny Co., Pa. 2-6

SINGLE COMB BUFF ORPINGTONS—"The Golden Nugget Strain." We showed six consecutive weeks and won 90 per cent of the prizes, which I think is one of the best showings that can be made in the West. Our mating list will be ready February 10. A postal card will bring it to you. Two pens of high scoring prize-winners. D. W. Boydston, Nevada, Ia. 10-09-1 yr.

FOR THE BEST ORPINGTONS, all varieties, you must send to their originators. Send 6c for illustrated catalogue. William Cook & Sons, Box A, Scotch Plains, New Jersey. 5-09-1f

"RINGLETS" STAND ALONE, VICTORS OF THE FIELD . . .

At America's Imperial Show, Madison Square Garden, New York, Winters of 1908 and 1909

E. B. THOMPSON'S BARRED P. ROCKS

As usual win the leading prizes and achieve the highest honors that can come to any breed. First prize on cockerel, first prize on cock, the Great National Silver Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. Double the number first prizes of any competitor. Special for best shaped male, special for best headed male, special on hen, special on pullet, the Sweepstakes Special in Gold for best Plymouth Rock on exhibition of either sex and any variety. The Imperial prize of the show, special for champion male.

At the 1909 New York Show my 1st Prize Sweepstakes Cup Exhibition Pen was Declared by Expert Opinion to be the Finest Ever Exhibited. A Paragon of Perfection, and created a Sensation as the Finished Achievement in Modern Barred Rock Breeding.

For more than twenty years at New York my "Ringlet" victories have been complete. Exhibited by me personally they have won a grand total of 127 prizes, 69 of these being firsts and specials, being more first and special prizes than won by any competitor in the history of the show. These include the \$100 Champion Challenge Trophy, won three times; the \$100 Association Cup, won three times; the \$100 Sweepstakes Cup offered by the President for best Plymouth Rock cock, cockerel, hen and pullet, any variety.

The "Ringlet" world's record at New York four years in succession is a page of history. The "Ringlet" record of first on exhibition pen three years in succession is the undisputed Champion. My clean sweep of FIRST, SECOND, THIRD, FOURTH AND FIFTH PRIZES on pullets has never been approached in Madison Square Garden, and stands alone and unequalled.

One thousand grand breeding cockerels for sale; elegant hens and pullets in any number. Show

"BOSTON BLUE" First Prize Sweepstakes Champion and Lawson Cup Winner at Boston, 1909.

BUFF WYANDOTTES THE KIND THAT WIN

At Chicago, 1909, in one of the strongest classes of Buff Wyandottes ever shown in the West, my birds won 1st, 2d cock, 2d, 3d hen, 4th, 5th ckl., 2d pullet and 3d pen, besides several specials, and

Again Show Their Superiority

Am now booking orders for eggs from prize winning matings at \$3, \$5 and \$10 per 15. Also have a few extra choice breeding and exhibition birds to spare at reasonable prices, considering quality. Write to the largest Buff Wyandotte farm in the world for catalogue; mention A. P. J.

Simon Beuth : : : : Box B, German Valley, Illinois

The "Norwich" Automatic Exerciser & Feeder

Is recognized by the leading poultrymen of the United States as the best, simplest and most practical Automatic Feeder and Exerciser on the market. It is GUARANTEED to be absolutely R.A.T., SPARROW and WEATHER proof. The same machine will feed four-weeks-old chicks, growing stock and breeders or flocks. Saves its cost in feed and labor six times a year. Increases egg production, hastens growth, prevents disease, stops loss and makes poultry keeping pleasant and profitable. Very simple in construction and operation; will not get out of repair and will last a life time. Send for our booklet explaining our 30-day free trial offer. We will also mail our Barred Rock or Light Brahma catalogue for 10c in silver or stamps. State which breed you want. But the Feeder booklet is free. Ask for it. BARRED PLY. ROCKS - S. C. W. LEGHORNS

ANNUAL SPRING SALE: Now is the time to pick up some of our breeders that have become famous throughout the country by the clean sweep made by their youngsters. We are compelled to sell some of them to make room for our young stock. And by the way, this is the time to look up exhibition birds for the summer shows, as our early hatched chicks are showing quality, and we feel that they will again lead in their respective classes. Write for particulars.

CHEVIOT FARMS ORPINGTONS

BARGAIN COCKEREL SALE

Do you want a cockerel in White out of champion cockerel of England—winner of \$250 prize at great Jubilee Exposition, and out of Crystal Palace winning pullet? I will have a few to spare, also several thousand cockerels of magnificent type and color and size from other matings.

I have several hundred Buff cockerels from birds that won championship of America under Stanfield; also several thousand from imported stock and the cream of my old stock.

I have several cockerels in Black out of old Empress herself; several hundred Nabob cockerels, absolutely pure, and several thousand part Nabob cockerels.

I must turn these surplus cockerels into cash; also must reduce number of cockerels to save room.

I will give you a better cockerel at \$2.50 or \$5 or \$10 than any other breeder can possibly give. These cockerels will every one carry royal blood and are far ahead of birds I paid from \$25 each up for a few years ago.

Bear in mind that I also have all Frank Sissons' English Buffs for sale at from \$25 per bird up.

THE CHEVIOT FARMS - MILTON W. BROWN - CINCINNATI, O.

Buff and White Orpingtons

The Oldest Specialty Breeders in the U. S.—Our show record on Buffs at Madison Square Garden is unequalled—winning silver cup for best display, showing only nine birds and having seven points more than our nearest competitor. In same show also won handsome silver cup for best cockerel. Our winnings at Chicago, where we won more firsts than all competitors, can not be equalled. Can there be any question where you should order your stock and eggs? Send for free mating list. We are quoting special prices to close out some grand breeding stock at this time. We breed for quality, health, vigor and egg production. Write us your wants.

BURHANS' PURE BRED PRIZE WINNING FOWLS

MY SPECIALTIES:

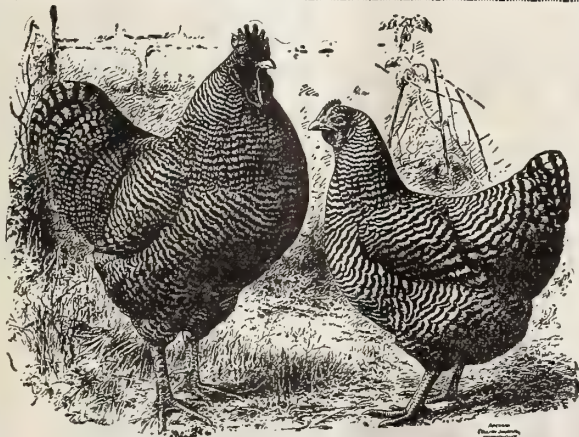

All Breeds Plymouth Rocks All the Orpingtons
All Varieties Wyandottes All the R. I. Reds

I breed all varieties of birds as above and breed them in their highest excellence. The newer varieties, such as Silver Penciled Plymouth Rocks, Partridge Rocks, Columbian Rocks, Columbian 'Dottes, are here in my yards in all their gorgeousness. I have one thousand head to offer to the trade, all bred from my choicest pedigree matings and direct from the yards of the originators and winners at Chicago, Boston, New York, Buffalo and the big state shows. My big annual poultry book filled with practical matter and full of the secrets of success for two red stamps to pay postage.

Also breed Cornish, Buckeyes, Pit Games and Bantams. My yards are the most complete in the northwest. I make a specialty of breeding trios at ten and fifteen dollars. Every bird banded with my name on sealed band to insure quality. I bear in mind that you want something better than you have. Let me know what you want.

**Successful Egg Farming**

Among people who can afford luxuries there is great demand for a regular supply of fresh eggs. The few growers who can furnish them regularly, Winter and Summer alike get very high prices.

The Corning Egg-Book

(entitled "46.41 per Hen per Year"), tells how two men, in poor health, starting four years ago with only thirty hens, made from their little egg-farm a clear profit of over \$12,000 last year. It tells all about their experience, their failures, their methods and how others men or women, with good sense, care and faithful work can make money in the same way. Not a detail left out.

The Corning Egg-Book is sold in combination with the Farm Journal, Philadelphia, Pa., and we have made arrangements to make this

Special Offer

For \$1.00 (cash, money order or check) we will send postpaid the Corning Egg-Book and the Farm Journal for two years, and American Poultry Advocate 2 years, all for \$1 if order is sent at once to

Diseases of Poultry

— BY —

D. E. SALMON, D. V. M.

Chief of the United States Bureau of Animal Industry

Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill.

THE PRICE IS ONLY FIFTY CENTS

Will send this book and American Poultry Journal one year for only 75 cents. Send all orders to

Wyckoff's S. C. White Leghorns

Acknowledged Everywhere the World's Greatest Laying Strain; Unequaled in Standard Qualities. Remember that we are the originators and for more than thirty years specialty breeders of the justly celebrated Wyckoff strain of S. C. White Leghorns, the most profitable strain of poultry in America today. Place your orders at headquarters and make no mistake. 3,000 choice yearling hens and cocks, and fine strong early cockerels must be sold at once to make room, and prices will be made especially attractive to early buyers. Send for catalogue and state wants as near as possible.

C. H. Wyckoff & Son :: Aurora, Cayuga County, New York

Three of the Best Poultry Publications, Practically Supplying the Entire Needs of Every Poultryman, at One-Half the Regular Price

Our "Big 3" Combination

**American Poultry Journal } ALL THREE FOR
Western Poultry Journal } 75 CENTS
Farm-Poultry } Reg. Price, \$1.50**

AMERICAN POULTRY JOURNAL is the oldest, largest and handsomest poultry paper in the world, and is conceded to be the leader in all things pertaining to poultry. Is copied by both old and new poultry publications. In fact, it has no equal. Now in its 41st volume.

FARM-POULTRY, published at Boston, Mass., is one of the oldest and best poultry magazines published in the East, and is now in its 20th volume. This magazine is always full of valuable information pertaining to thoroughbred poultry, and covers the Eastern field in a most thorough manner.

WESTERN POULTRY JOURNAL, published at Cedar Rapids, Iowa, is in its 21st volume, and is one of the most up-to-date poultry magazines published in the West. The two, together with the old reliable American Poultry Journal, thoroughly cover the entire field of poultry literature, and make a poultry library in themselves.

THE GREATEST COMBINATION EVER OFFERED

and especially so when you take into consideration the fact that American Poultry Journal contains from 68 to 188 pages of interesting matter, any number of which is worth more than we are asking for one year's subscription to all three magazines. This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address all orders to

There's Money in Baby Chicks

**Candee Incu-Brooder Unequalled for This Work—
It Assures You a Steady Profit.**

Lowest Cost of Operation—

Because only compartments in use are heated, saving coal. Exclusive Candee feature.

Highest Efficiency —

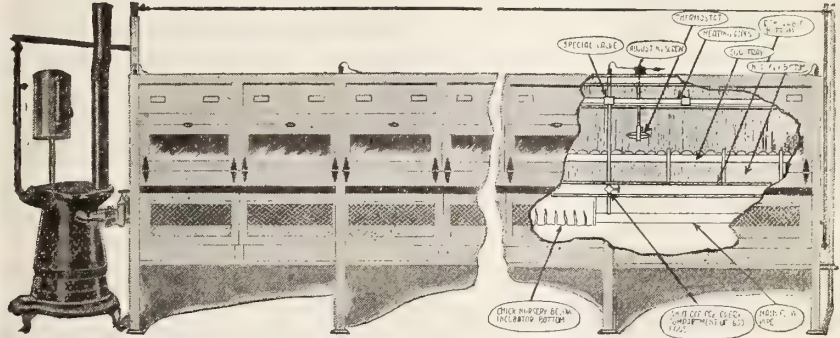

Because heat of each compartment is controlled by a separate thermostat. Exclusive Candee feature.

Easiest to Operate—

Takes but two minutes night and morning. Outside weather conditions cannot affect it. No float to get out of order. Exclusive Candee feature.

Best Results —

Because you save on your coal, time and labor and gain in the percentage of chicks hatched, making the greatest possible profit.

Opportunity in Poultrymen, farmers and fanciers know that day the Day-Old old chicks are worth three or four times the money Chick Field paid for eggs. The Candee Incu-Brooder makes it possible for you to realize big profits because it produces the largest proportion in hatching. The Incu-Brooder is sectional built in units of 600 eggs each and with a capacity from 2,400 (smallest) to 20,000 eggs. It can be added to at any time. It is furnished as a mammoth incubator only or with the brooder nursery combined, as desired.

Candee Hot Water Brooding Systems

Lowest First Cost — Less than installation of equal capacity of oil heaters.

Easiest to Tend—Require but a minute night and morning, regardless of size.

Lowest Running Cost— Coal consumption cost less than oil cost for equal capacity.

Healthy Heat—No danger from oil or fire and no fumes. Result is healthy chicks.

Candee Brooders are in use in every state, giving the greatest satisfaction. They are intensely practical and give positive results. They make model Brooder houses and healthy chicks that delight every poultry lover.

Four First-Class Poultry Publications Published in Different Parts of the U. S., at One-Half Price

American Poultry Journal : : : } **\$1.00**
American Poultry Advocate : : : } **Regular Price \$2**
Poultry Item and Commercial Poultry

AMERICAN POULTRY JOURNAL needs no introduction, as it is the oldest, largest and best poultry paper in the world. Is the leader of the poultry press, and now in its 41st volume. No poultryman can afford to be without it, as it has no equal.

AMERICAN POULTRY ADVOCATE, the great New York state paper published at Syracuse, and full of good reading matter, is always welcomed by the subscriber. Now in its 18th volume. It is conceded to be one of the best poultry papers published in the east.

POULTRY ITEM, published at Sellersville, Pa. Now in its 12th volume, and although a young publication compared to the others embraced in this offer, it is safe to state that Poultry Item is rapidly pushing toward the front. Full of valuable information and complete winnings.

COMMERCIAL POULTRY, published at Marseilles, Ill., is now in its 18th volume. True to its name, it instructs the reader on poultry as a business. Its volumes contain articles by excellent writers who contribute regularly and make it interesting for the reader.

When reading this do not lose sight of the fact that American Poultry Journal contains from 68 to 188 pages of interesting reading matter; that it has a strong corps of field men who report on conditions in their territory each month so that it contains the "newsiest" news of the poultry world. A single copy is worth more than we ask for one year's subscription to all four.

\$2.00 Value for Only \$1.00—This offer is for both new and renewal subscriptions. Cut out the coupon and send in your order today. Address

From Kellerstrass Farm

Do you know that one Kellerstrass Strain Crystal White Orpington laid 263 eggs in 272 days?

Do you know that Kellerstrass Strain Crystal White Orpington chickens brought a return of \$38 per bird for six months' time?

Do you know that Kellerstrass Strain Crystal White Orpington hens are snow-white and weigh 9 and 10 lbs.?

Do you know that one Kellerstrass Strain Crystal White Orpington produced 111 chicks in 12 months' time?

Do you know that you can gather one egg from each bird per day from the Kellerstrass Strain of Crystal White Orpingtons?

Do you know that one Kellerstrass Strain Crystal White Orpington produced 151 chicks in 12 months' time?

Do you know that a breeder of the Kellerstrass Strain of Crystal White Orpingtons had to return \$1000 for orders that they were unable to fill during the past season?

Do you know that one Kellerstrass Strain Crystal White Orpington produced 156 chicks in 12 months' time?

Do you know that 30 Kellerstrass Strain Crystal White Orpington hens produced over \$1000 worth of stock and eggs this past season?

Do you know that one Kellerstrass Strain Crystal

White Orpington produced 300 chicks in 12 months' time?

Do you know that Kellerstrass Strain of Crystal White Orpingtons made a net profit of \$20 per hen in 12 months' time?

Do you know that Kellerstrass Strain of Crystal White Orpingtons weigh 4 lbs. each at 14 weeks' and 4 days' old?

Do you know that a pen of 5 Kellerstrass Strain Crystal White Orpingtons, consisting of 4 females and 1 male bird, produced \$436 in 12 months' time, and the original pen left on hand?

Do you know that 11 of Kellerstrass Strain Crystal White Orpingtons laid over 913 eggs in 4½ months' time?

Do you know that Kellerstrass Strain of Crystal White Orpingtons, when 5 months' old, would set on their own eggs and hatch them?

Do you know that from 18 Kellerstrass Strain Crystal White Orpington hens and pullets, over \$200 worth of eggs were sold in 12 months' time?

Do you know that Kellerstrass Strain of Crystal White Orpington chicks 2 months' old sell for over \$2.50 each?

Do you know that Kellerstrass Strain of Crystal White Orpingtons lay when 3½ months' old?

Do you know that out of over \$200 worth of Kellerstrass Strain Crystal White Orpington chicks, there were only 3 died?

Well, if you do not know all of the above things, we are going to tell you about them, and if you are interested at all you will find that this is the greatest advertisement you ever read.

The answer and full particulars to the above will be published in this journal next month, regardless of how many pages it will take to tell the story

So be sure and preserve this ad. Lay it away where you can put your hands on it next month when you read this journal. It will be the most interesting thing you have ever read in your life. It will give the "doubting Thomases," and the old-time moss-back breeder, and the fellow who knows it all, something to think over.

DON'T BUILD

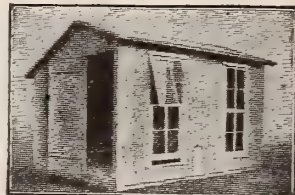

that new hen-house or fix up the old one but get our large 100-page catalog and circulars (over 120 illustrations) showing POTTER PORTABLE SANITARY POULTRY HOUSES, Roosting and Nesting Outfits, Perfection Feed Hoppers, Trap Nests, Feeds, and supplies of all kinds. Potter Fixtures have been on the market nearly ten years. They are made in 3 styles and 12 sizes, and are complete, convenient and sanitary. Our Portable (K. D. made in sections) Hen-houses, Brood Coops, Pigeon Lofts, are made in 20 styles and sizes, from a coop 2 ft. square to a complete house 8x80 feet, or longer, at lowest prices. House shown is 8x10 feet complete with 8 feet Potter Outfit for 30 hens for \$40. A fine house at a low price. If you need a house or coop of any kind do not fail to find out about the Potter line before buying or building.

DON'T KILL

or sell your laying hens, use the POTTER SYSTEM and pick out the layers from the loafers and diseased hens. Keep only healthy laying hens. The POTTER SYSTEM is a secret and the greatest discovery of the century in the poultry world on the subject of Egg Producing Hens. Used by over 30,000 satisfied poultry keepers who are saving dollars every year. Our new 100-page Potter System book, "Don't Kill the Laying Hen," contains the secret and knowledge about laying and non-laying hens. It's a revelation to poultry keepers and you will learn how you can use the Potter system on your flock; keep less hens, get more eggs and make more money using it. Write today sending 2 RED STAMPS to cover postage on our large catalogue and circular, telling all about Potter Poultry Products made for Particular Poultry People. If you are particular and want to make more money on your flock you will write us today.

Special Sale: Several thousand stock birds. Write requirements for special quotation. Mention A. P. J.

A LIVING FROM POULTRY

\$1,500 from 60 Hens in Ten Months on a City Lot 40 Feet Square

TO the average poultry-man that would seem impossible and when we tell you that we have actually done a \$1,500 poultry business with 60 hens on a corner in the city garden 40 feet wide by 40 feet long, we are simply stating facts. It would not be possible to get such returns by anyone of the systems of poultry keeping recommended and practiced by the American people, still it can be accomplished by the

Philo System

The Philo System Is Unlike All Other Ways of Keeping Poultry

and in many respects just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard of results that are hard to believe without seeing.

The New System Covers All Branches of the Work Necessary for Success

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner.

Two-Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss, and the broilers are of the very best quality, bringing here three cents a pound above the highest market price.

Our Six-Month-Old Pallets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, **The Philo System of Poultry Keeping**, gives full particulars showing these wonderful discoveries, with simple, easy-to-understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

Three-Pound Roasters Ten Weeks Old

Don't Let the Chicks Die in the Shell

One of the secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the ancient Egyptians and Chinese which enabled them to sell the chicks at ten cents a dozen.

Chicken Feed at 15 Cents a Bushel

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as it is to keep a cow without hay or fodder.

Our New Brooder Saves Two Cents on Each Chicken

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all the lice off the chickens automatically or kill any that may be on them when placed in the brooder. Our book gives full plans and the right to make and use them. One can easily be made in an hour at a cost of 25 to 50 cents.

Testimonials

South Britain, Conn., April 19, 1909.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—I have followed your system as close as I could; the result is a complete success. If there can be any improvement on nature, your brooder is it. The first experience I had with your system was last December. I hatched 17 chicks under two hens, put them as soon as hatched in one of your brooders out of doors and at the age of three months I sold them at 35c a pound. They then averaged 2½ lbs. each, and the man I sold them to said they were the finest he ever saw and he wants all I can spare this season. Yours truly, A. E. Nelson.

Elmira, N. Y., Oct. 30, 1909.

Mr. E. R. Philo, Elmira, N. Y.

Dear Sir:—No doubt you will be interested to learn of our success in keeping poultry by the Philo System. Our first year's work is now nearly completed. It has given us an income of over \$500.00 from six pedigree hens and one cockerel. Had we understood the work as well as we now do after a year's experience, we could have easily made \$1,000.00 from the six hens. In addition to the profits from the sale of pedigree chicks, we have cleared over \$960.00 running our hatchery plant consisting of 56 Cycle hatchers. We are pleased with the results and expect to do better the coming year. With best wishes, we are,

Very truly yours,

(Mrs.) C. P. Goodrich.

Special Offer

Send \$1.00 for one year's subscription to the **POULTY REVIEW**, a monthly magazine devoted to progressive methods of poultry keeping, and we will include, without charge, a copy of the latest revised edition of the Philo System book.

ARGUMENTS

Not needed as to quality when one goes to New York with a string of their very own : : birds and wins in : :

White Wyandottes

1st, 3d and 4th cockerel; 1st and 3d pullet; 2d hen; 5th cock; 2nd pen; 1st collection; many specials; and pen lost first only through slight injury to male's tail. Compare this with UNSUBSTANTIATED claims of "unbeaten" stock. You want a fine trio now, I can please you. You want 100 or 200 layers, I can furnish them. You want soon to win at a Fall fair, I can turn the trick for you or better still you want to win over some competitor this winter. Then you must write me for it's the hottest competition my stock wants. You say what it's worth to win, and I will see to it you do. Send 10c for handsome illustrated catalogue to the great specialist breeder.

ARTHUR G. DUSTON, BOX 1020, SO. FRAMINGHAM, MASS.

A FRANK QUESTION

OWEN FARMS asks you a frank question: "How much will you give for cock, hen, cockerel, pullet or pen to win your fall fair?" It is not unusual for you to buy what you want in this way. It certainly pleases us to have you tell us this right off in your first correspondence. You know as a buyer that if we do not think your offer is enough to win your fair we will not accept it. If we think it is, however, and we can win your fair we will accept it. Always the only difference between a would-be customer and Owen Farms who wants any particular stock, quality fully described and understood by both our customer and ourselves, comes in the price to be paid. We are especially confident that we will agree upon this price. Write us, then, right away and get down on business. We tell you squarely that you do not commit yourself in any manner unless the bird is satisfactory at the price. You always must keep this in view.

EARLY SHOW BIRDS

Have we many? More than ever before. 5,000 birds raised from our very best in our different varieties and not a bird less. We commenced to hatch in January and have been hatching ever since and shall hatch up to the last of August. We know that females and males can be furnished at absolutely the right condition of feather and ripe for the show especially as we shall have birds that are exactly the right age for the time when the show occurs. How good are these early show birds? Better than we have ever produced in all of our varieties and there is no show that has any terrors for us and which we do not gladly welcome an opportunity to supply winners for, guaranteed to win. The condition would be such as you would expect in the top form of the bird for the time and place and the price would fit the quality. Remember that. Always with Owen Farms, the price is never high, but always only sufficient to cover the quality desired and necessary.

FITTING WINNERS

OWEN FARMS paid Harry W. Graves, now dead, \$100 and expenses six years ago to fit their string of birds for New York and thought it cheap. Today our Mr. Delano has to take off his hat to no living man in America in fitting birds to win in the show room. Just think for one moment that you get this without extra cost whatever. Don't you believe Owen Farms did well to spend that \$100 that year? If you do, you must know that you would do well to insure fitting such as OWEN FARMS through our Mr. Delano can give you. We match pens to win. Winning every pen in N. Y. last year is the best evidence. Five first pens at Boston clinched the argument. We mean business and how far pride in continuing this great record goes in fitting and matching pens for our customers, we leave you to judge.

BOOKING WINNERS

When is it best to book your orders for the ensuing year? We say "Now." Never mind how far off the date of your show if you are sure that you are going there now is the time to write about it and to book your engagement with us as early as possible. Early fall shows, midwinter or late shows in February have been already booked by us in very large numbers, because our customers appreciate one great advantage. What is the advantage of early booking with Owen Farms? If you can get Owen Farms to say that they will win a certain show for you at a certain price no living man can buy a bird to compete against the bird sold for that show, never mind what the offer might be. You realize in making such an early booking that you are uniting all the possibilities of Owen Farms' large flock from which they can select absolutely and exactly the right bird fit for the moment to win in your interest and name.

UTILITY COCKERELS IN OCTOBER

In past years we have had a remarkable demand for big, husky utility cockerels having our best thoroughbred blood and ready for early breeding. This year we expect even a larger demand and we have prepared to fill it and the price will be \$5 each. These cockerels are of the finest breeding, full of life and vigor and from flocks that are not excelled as producers of large, brown eggs and many of them.

WHAT WE HAVE TO SELL

What we offer to you are birds of the breeds most popular in the show room. Our breeds form the largest classes constantly at New York, Chicago, Kansas City, and, in fact, every poultry show in America. We also say that we have demonstrated ourselves by our show record to be at the very head and front of each of these breeds which we offer. You do not have to take our word for this but study the records. You can find our winnings in our catalogue and you can secure the winnings of any other breeder and if ours do not compare favorably and to our advantage we ask you to write and call our attention to some other existing record that seems to you to surpass ours. Our breeds are

The Buff Orpington	The Barred Rock
The White Orpington	The White Rock
The Black Orpington	The White Wyandotte

Your correspondence is urgently solicited

Naturally, you want the greatest possible value for your money, therefore get our free booklet before placing your order : Please mention A. P. J.

S. B. & E. W. TWINING : "AFTON FARM" YARDLEY, PENNA.

White Wyandottes!

Three thousand chicks coming nicely. Room we want and must have, therefore will offer a few of our birds we had in our breeding yards this past spring. We have issued a sale sheet describing a number of them. Our new catalogue also gives prices and descriptions of both males and females.

THE WORLD'S BEST

With a reputation. A chance to procure birds of breeding quality, such as has never been offered by us; a limited number of show specimens of which we will dispose. Send for list with our new catalogue—enclose ten cents for postage—it is worth dollars to you. It will tell you all the good qualities of the White Wyandotte fowl. Pictures of our birds as seen through the camera. It also treats on conditioning show birds, manner of feeding, etc.

Please write us at once and procure some of our grand birds.

J. C. FISHEL & SON, Box J, HOPE, IND.

CAPON CULTURE

Poultry Keeping Made Profitable by Caponizing—A Constantly Growing Demand for Capons—Capon Bring Higher Prices Than Turkeys—The Time to Caponize and How to Do It Successfully

Written for American Poultry Journal by S. B. Twining, Yardley, Pa.

females.

At Afton Farm we keep careful accounts of each department and at six months of age our male chickens, excluding the Leghorns, are worth more than the females. The secret: We select out the best males for breeders, which sell for \$5 each, and make capons of the balance. Capon culture is today the best paying branch of the market poultry industry.

Turkeys are extremely hard to produce and the growers that got an average price of 30 cents per pound wholesale the last winter thought they were doing unusually well.

Plump, tender fowls have been selling readily, but it would not pay farmers to grow fowls for market. This supply must be furnished by the hens that are "laid out." Soft meated roosters average something over four pounds each and wholesale in New York for 25 cents to 30 cents per pound, according to season of the year. This is, however, rather an uncertain business, for if you keep your birds too long they will get staggy and you will only get the price of fowls and cocks.

Cocks seldom bring over 15 cents per pound wholesale and have to be plump to do that. But how often are your cockerels plump? They run the hens, reducing both their own and the hens' weight and make the flesh tough. I tell you the carcass of the average male bird kept past the broiler stage seldom pays for its cost of production. A leak in the profit account, it should be stopped. How? By caponizing. Turn the loss into a profit. I say again, capon culture is today the best paying branch of the market poultry industry. What is more, the demand is increasing more rapidly than the supply. Don't talk to me of overstocking the market. That is, with good dressed poultry. The market is already overstocked with cull poultry of all kinds. Put good, tender, juicy poultry on the market in attractive shape, five, aye, ten times as much as is now going in, and it will be quickly grabbed up and without the price dropping one cent. I am in constant touch with the markets of Boston, New York, Philadelphia, Atlantic City and Washington and know what I am talking of. The people want good stuff and are willing to pay for it. Capons are good stuff. Ship into market the tempting capon instead of the old, tough, stringy meated cockerel and you, your commission man, the butcher and the consumer will all wear smiles. Get busy. See how easy it is to make the world brighter and make money all in the same act.

Broiler production is profitable, but why kill a chick at a pound for \$1.25 per pair or at two pounds to sell at 35 or 40 cents a pound? Caponize the males when they weigh about a pound and a half and sell them at eight to ten pounds and

get 30 or 35 cents a pound according to the market. The writer got 30 cents per pound straight for his entire output last season. Season, did I say? There is no special season for capons. However, from Thanksgiving to Decoration day the price is usually best. To work our farms to the best advantage we caponize our spring and summer males and market by February 1. They should weigh eight pounds and upward per bird to command the best prices. Light birds are often sold in with "the slips" and bring several cents under the market.

The most tedious and expensive part of chicken raising is the hatching and rearing up to a pound. After that they can be quartered in inexpensive houses and tended easily. A man would have to hustle to take proper care of a thousand chicks up to the pound stage, but birds past this point a man could properly care for five thousand with ease.

It costs a great deal to produce the first pound of chicken, but after that flesh is made cheaply. This is mainly because it is not the feed but the labor, housing, etc., that runs so into money in successful poultry culture. Grow your birds up to a pound and a half so that they are good, thrifty specimens not overly fat. Then select out the best pullets for layers either for yourself or to sell. There is a demand for good pullets. Put balance of the pullets into fattening pens and dress at two pounds as broilers for market, also the cull males. (We have never seen the plant yet where they produced no culls and we get around quite some.)

Pen up the good males in comfortable quarters and keep feed from them all the day previous to the day of operation. Let them have all the water they wish to drink, removing it that night so that they have neither food or water the morning of the operation.

The day has arrived. It should be clear and the operations performed where there is good natural light. At Afton Farm we prefer to operate as early in the morning as possible. We have the birds caught and put into convenient coops. An inverted barrel makes a table the right height and we have a wooden box built to resemble a dress suit case. It is convenient to carry the tools in and is made to fasten the birds to. The tools are taken out and wiped off; tool box laid on its side on barrel. A strap is drawn through a flat staple on the top side of the box near the front and a belt lacer is fastened to a staple in the far end of the box five inches from the front. A cockerel is taken and with his wings pushed back placed on his left side on the box. The wings are strapped to the box and the legs placed together and drawn out towards end of box. The belt lacer is then wound around them a couple of times and the end pulled between the legs to make it secure. This holds the bird tightly. Now remove the feathers from the body just in front of the leg. Wipe the flesh free of feathers and dust with a damp sponge. Take your knife and make an insertion between the last two ribs. If the birds have been properly fastened there is no danger of cutting too deep. Now take your spreaders and put them on the cut so as to make an opening that you can see into the bird. You will find a thin membrane, which must now be cut. After doing which you will see the two testicles, one on either side of the backbone. Put your wire loop over your spoon and slip spoon under the lower testicle. Draw up on wire so that it slips off bowl of spoon up against cord attachment of testicle. Now slip canula down hard against top of this cord and sea-saw on the wire, pulling up at the same time, and soon you have the lower testicle out. Now do the same with the top testicle.

Great care must be taken not to puncture the artery that

runs between the testicles, for if you do the bird will bleed to death. The reason for taking the lower testicle first is, you may cut a minor blood vessel, which, if you took the top one first and had such an accident, the chick would get so bloody you could not see to take the lower testicle out. Such a cut, however, would not cause the bird to bleed to death.

Be sure and take the testicles out clean. If you leave the

smallest part it will cause a slip, which is not near as profitable as a capon, as they only develop half as well and their flesh is not as fine grained.

Many mark their capons by cutting off one of the toes or putting a leg band on. One party I know finds hog rings a cheap, quick and plain way of marking his capons.

The bird is now ready to be loosened from the table and set carefully down. He should be allowed all the water he cares to drink and a mash feed for supper. No sewing or disinfectants are necessary. It is wise, when making the cut, to pull the skin to one side, then when set free the cut in the skin is not over the cut in the flesh, therefore the hole is sealed.

Caponizing is an easy art and perfection comes with little practice. Many fail because of poor instruments. I know of no regular set on the market I care to recommend. Most of the tools are better looking than they are practical. We have our tools made to order at G. P. Pillings & Son Co., Twenty-third and Arch streets, Philadelphia, Pa.

Last winter a prominent duck grower decided to raise a couple of thousand capons out of the duck season. He and his son had a great time working on the birds. They had two well known sets of caponizing instruments, but success was not theirs. Finally they called in a local surgeon, who failed to better matters. Then the writer was asked to help them out. I went, operated on a few birds and then while I was talking to the father the son tried his luck with my instruments and found it so easy that I was able to come home, as it was fun for the boy, working with these practical tools. Get a good knife, set of spreaders, spoon and a canula and caponizing will be easy. The trouble is people want to buy their tools too cheap. Pay a fair price and get a good set—a set that will turn loss into profit.

Now that we have our males operated on the rest of the work is light. They are housed a hundred each in colony houses and have free grass range with plenty of fresh, clear water. They have hoppers of wheat, cracked corn, beef scrap, grit, oyster shell and charcoal before them all the time. Each night they are given a moist mash of equal parts bulk bran, corn meal and middlings, all they will eat clean. Two weeks before dressing for market, we take all hoppers from houses and feed them three times a day a moist mash of four parts corn meal, two parts middlings, one part bran, one part beef scrap, two parts finely cut celery, with grit enough to grind it. After the night feed we coax them to eat more by throwing out cracked corn as long as they will pick it up. In a fortnight you have a flock of birds rivaling the turkey as to quality

and flavor of meat, selling for more than turkeys and much easier to raise. Last Christmas there were twice as many capons used as ever before. And capons were retailing for more than turkeys. Why thrust a lot of good for nothing chickens on the market when by caponizing you can turn these leggy birds into flesh relished by the epicure? Turn this unproductive end of the poultry business into a profit. Capons pay and pay well. Try a few this year and be convinced.

SYSTEMATIC FEEDING

HE food that is usually given to poultry is varied in its nature, and the kind and quality often depends (with many fanciers) on that which is most easily obtained or the cheapest. I believe the majority of small fanciers do not supply the best always, as in many cases they are ignorant of the different qualities of the various foods. It greatly depends on the feeding to ensure certain distinct results which may be wanted, and to my mind, in a great measure these can be obtained through judicious feeding.

Five compounds are found in the foods of poultry—water, protein, fat, carbohydrates and ash. All foodstuffs, no matter how dry they may seem, contain a considerable amount of water. In grains and dried meat the water averages 10 per cent of the material, in raw meats 50 per cent, while in some vegetables it amounts to 90 per cent.

The protein of food is characterized by containing nitrogen. The terms nitrogenous matter and the albuminoids are frequently used to designate this group. The function of the protein is to build up and repair the working organs and parts of the body, and to supply material for the production of eggs, feathers, etc. No other food constituent can do this.

Since the carbohydrates and fats serve nearly the same pur-

First prize Partridge Plymouth Rock hen, Cleveland, 1909. Bred, owned and exhibited by S. A. Nofztger, North Manchester, Ind.

pose in the animal economy, they may be grouped together. Experiments have shown that fat is about $2\frac{1}{4}$ times more effective as a food than are the carbohydrates. Fat in the food may either be stored in the body as fat, or burned to produce heat and energy. Carbohydrates constitute a large

Second Prize Pen S C BLACK MINORCAS
MISSOURI STATE POULTRY SHOW ST. LOUIS MO Dec 1909 Bred & Owned By W. O. CHASE HILLSBORO ILL..

part of vegetable foods. In the animal body they are converted into fat or used (burned) to produce heat and energy.

The ash of the food is the source of the mineral matter of the animal body, and as such is of importance. Ordinary feeding stuffs, however, do not contain sufficient lime for shell formation, and an extra supply of this material is required.

First White Plymouth Rock cockerel at Detroit State Show. Bred and owned by Lyman H. Hill, Jackson, Mich.

The term animal food is used to denote a number of highly nitrogenous substances fed to poultry. The most important are waste meat, ground raw bones, dried blood, fresh fish and skim-milk.

To obtain the best results in egg production from confined laying and breeding stock some form of animal food should be supplied about every day. Eggs and meat contain similar proportions of the different nutriment—protein and fat. However, in an equal weight of meat and eggs there is less water in the meat, so that three-quarters of a pound of lean meat equals in nutritive value one pound of eggs. In both eggs and meat there are no carbohydrates. Especially during the moulting season a large amount of animal food should be fed the fowls for the reason that the growing feathers require the nitrogenous matter that meat supplies most readily and cheaply.

The cost of the different cereals in the locality should determine what varieties of grain are to be fed to the fowls. When feeding fowls that are confined or at liberty, animal food should supply the greater part of the protein or nitrogenous portion of the ration. In that case, the grains are required more for maintaining the heat of the fowl's body, and it will not be profitable to purchase expensive grains for this use. Poultry will thrive better on a variety of food stuffs than they will on a single food of the same nutritive value. It is preferable to feed a number of grains, both ground for the mash and for feeding whole in the litter, rather than to limit the selection to one or two sorts.

The value of vegetable foods such as clover, mangels, turnips or cabbages is attributed to the succulency and also to their bulky nature. The amount of nutriment in them is comparatively small.

Laying hens require lime for the formation of egg shells and a quantity of crushed oyster shells should always be set convenient for them to help themselves. If crushed oyster shell be not supplied the fowls are apt to start on to eat their eggs to secure lime.

All classes of poultry masticate their food by a grinding process in the gizzard. The gizzard is lined with a tough membrane or skin, and will not be injured by a hard or sharp grinding material. In fact, the more hard and insoluble the grit is, the longer it will perform work. Crushed oyster shell is the very best and can be had at any supply house at small cost.

Plenty of water is indispensable to the health of poultry, and it should be pure and fresh. Laying hens especially require an abundant supply of fresh water on account of the great percentage of water in eggs.

IMPORTANCE OF CORRECT BREEDING

Interbreeding One of the Greatest Aids in the Science of Breeding—Skill and Knowledge Required in Line-Breeding—The Felch Original Breeding Chart—Strong, Vigorous Ancestors Necessary

Written for American Poultry Journal by Rev. C. E. Petersen, Bridgton, Maine

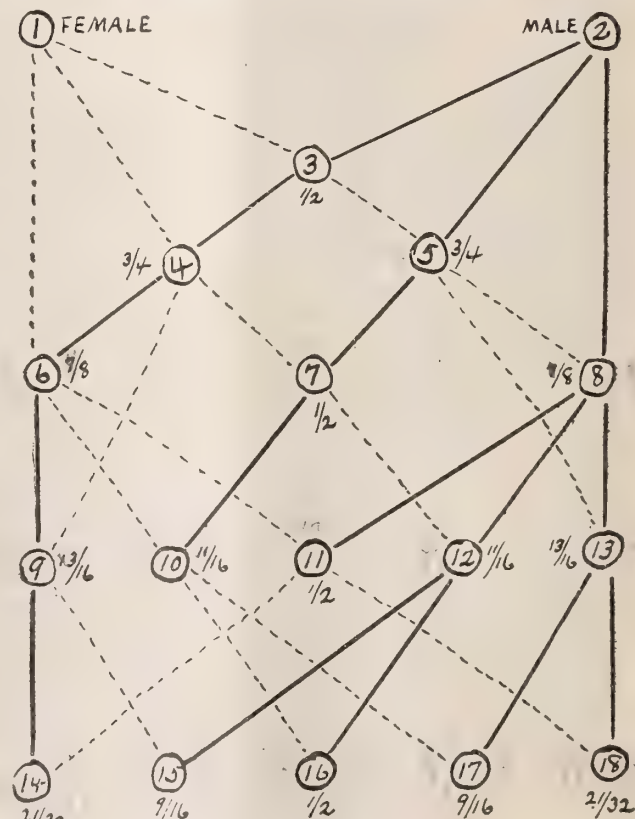

IN the following notes and opinions and well established facts, we are dealing with a science so complex and so fraught with difficulties of the most intricate kind that some of them have furnished material for the study of a lifetime to some of our greatest biologists of the present age.

From this it can of course easily be seen that it is not a matter for the tyro to dabble in, that it presupposes a knowledge far greater than the average breeder possesses of the application of the science, and an intimate knowledge of the breed of fowls in which some notable improvement is contemplated.

He must have a correct ideal in his mind, standing out clearly and definitely as to what is wanted. There must be no doubt in the matter or hesitancy on the part of the breeder to set aside any specimen who is not going forward to the ideal.

And even here it takes almost intuition to know, even to the expert breeder who by years of study has fully come to know, both the strong and weak points in the breed he has made his specialty, or the ideal may be gained at a frightful expense to the posterity in the gradual loss of constitution, sexual instinct, productiveness and all other useful qualities that might have been kept intact if the work had been pursued in a different manner and by a person who knew, to its full extent, the difficulties and dangers in the system of interbreeding.

It would be madness to urge on a beginner in poultry culture to take up such a task who has not even a desire to work out for himself any such problems in the science of breeding that

THE FELCH BREEDING CHART.

The plan of line breeding advocated by I. K. Felch, Natick, Mass., the old veteran judge and breeder who for 40 years has been a deep student of the problems of mating.

only the expert breeder of years of experience can work out to a successful issue.

Interbreeding is one of the greatest aids in the science of breeding to a standard or for any desired point of fancy or utility, but let us not forget that interbreeding is an expediency to accumulate the blood of an individual possessing some point of real or imaginary value, that we want to fix in the breed and fix it so well that it becomes prepotent and one of the breed characteristics, that is what is called "breeding to standard."

Now it is easy to comprehend that here lies the real danger in interbreeding, as the temptation to use specimens with some congenital defects is very great if the said specimen in other desired features measures up to the desired ideal. And this desire to breed for the perfection of certain feather points makes it almost impossible to prevent the introduction of sick or unhealthy specimens into the breeding yard, with the always ready excuse "that it may turn out all right," but experience, the greatest of all teachers, teaches us that it never turns out all right, but always disastrously.

If the breeder fully realizes the laws of interbreeding and knows how to apply them in the perfection of his stock, all is well, but if he don't it acts like a boomerang; it comes back on him, and with a vengeance.

That good and permanent results can be obtained by inter-

vigor. In relation to the subject of domestication, the whole subject is of some importance, as too close interbreeding interferes with the improvement of old races."

That this last is a positive fact, we have more evidence of today than when Darwin wrote his great work. Interbreeding can be indulged in to our heart's desire, with our new breeds where so much foreign blood was used in their formation, and which vigorously battles against the breeder, and will not be subdued, cropping out in all kinds of defects, even the best established of them cannot be said to breed true to color, or other characteristics. In this case interbreeding goes on without any noticeable impairment in vigor, and their respective breeders, of course, stand for the harmlessness of close interbreeding. But, on the other hand, we have a long and sad catalogue of the evil influence of too close interbreeding, in the results now visible in some of our oldest races of fowls, that have almost become extinct by careless and indiscriminate interbreeding, and for any practical purposes useless. Eggs from such stock interbred for generations without the necessary introduction of new blood, when it was manifestly necessary, hatch but poorly under hens, and it is simply waste of time to try to obtain results from them in an incubator. The cockerels are not very conspicuous as to strong sex mani-

SCENE ON THE FARM OF KING BROS., OSHKOSH, WIS., BREEDERS OF B. P. ROCKS.

breeding has never successfully been contradicted, but if these good results can be obtained without any consequent evil results is a problem that has not been fully settled and is still a mooted question with some, yet the evidence goes to show that interbreeding cannot be continued for any length of time without injurious results to the posterity, and that a cross some time or other becomes an imperative necessity.

On this subject of the good and evil results of interbreeding, Darwin gives a very full exposition. He says in part:

"The gain in constitutional vigor derived from an occasional cross between individuals of the same variety cannot but belong to distinct families or between distinct varieties, has not been so largely discussed as have the evil effects of interbreeding. But the former point is the more important of the two, inasmuch as the evidence is more decisive. The evil results from close interbreeding are difficult to detect, for they accumulate slowly and differ much in degree with different species, whilst the good effects which almost invariably follow a cross are from the first manifest. It should, however, be clearly understood that the advantage of close interbreeding, as far as the retention of characteristics are concerned, is indisputable and often outweighs the evil of a slight loss of constitutional

festations so conducive to strong potency, and the females are nearly always poor layers, listless and inactive.

We may as well state again that we believe in interbreeding, and that without it progress is not possible, but that interbreeding is only to be used as a valuable means for improving stock, and only by expert and skillful breeders, who know how to take advantage of it.

But that improvement does not mean the extravagant exaggeration of some one desirable fancy point, to the utter extinction of all the other of the fowls' good qualities.

Interbreeding can be followed up to a certain point, when nature says so far and no farther, then a standstill in development, followed by rapid deterioration, if the new blood is not immediately resorted to. We do not want our readers to take for granted that all these manifestations become apparent immediately; they are of slow growth and the deterioration being gradual, can only be distinguished in their first stages by an expert eye. We may say that one of the very first signs is decreased potency, and a tendency to malformation in the chick. The greatest care should, of course, be used in introducing new blood, as by an injudicious cross the work of years may be utterly ruined. It is for this reason that most

of our breeders possessing valuable strains of fowls, when new blood is required, always use a female to introduce it, as, by so doing, he keeps in full control the result of such an introduction, and the male line intact.

I said intact. By this I mean that as we do not want to alter the type of our strain, we use a female, for by using a male we should be very likely to alter the type, as his influence is

WHITE PLYMOUTH ROCK.

Fourth prize cock at Chicago, 1908. Bred and owned by Lyman H. Hill, Jackson, Mich.

very great in this respect. The most of the breeders of a valuable strain of birds are loath to introduce new blood in any form, as there is a great risk connected with it, but they all come to it sooner or later, and, as Darwin says: "Now I have inquired of good many breeders of fancy fowls and I have hitherto not met a single man who was not thoroughly convinced that an occasional cross with another strain of the same variety was absolutely necessary."

The noted breeder, Sir John Sebright, who lived in the beginning of the last century, was the originator of a method to check the evil influence of close interbreeding, that may be stated as the separation of a few related individuals from the common flock for a few generations.

These birds would be subject to different conditions of life, and this change of soil, and climate, would affect, perhaps, almost as great a change in the constitution as would an infusion of fresh blood. This method we have used with good results for a number of years, and is now extensively used by breeders of note, who do not desire to run the risk of the infusion of new blood, and so prefer to have chicks reared in places remote from them, by some friend, and returned to them when needed.

From this discussion it will be seen that it is not child's play to become an effective breeder of fancy fowls, and the builder of a strain of birds, prepotent in the transmission of all their many good qualities, but which would not be possible without the potent influence of interbreeding judiciously used. To the inexperienced breeder let me give this advice: Better buy and keep up the birds from a well-established strain than to form one of your own, except you got the fancier spirit born and bred in you; if so, go on and success will be sure.

Line-breeding, or breeding in line, is a term upon which almost every writer that we have noticed has a different view, and most of the so-called line-breeding is really not line-breeding at all.

Line-breeding is a system that requires some skill and considerable knowledge of what constitutes the good points in the stock bred, and to be carried out successfully it is very important that we have enough stock to select from so that we may come as near the desired point as possible.

We have frequently seen it advertised, as a point made, in the obtaining of customers, line-bred for so many years, but

unless I know the breeder behind the stock thus bred, and from where he got his first beginning, I might as well look for as many defects as for excellences, as without knowledge of every desirable feature in the stock bred, and a strong determination to breed only the best, defects will be fastened to the same extent as some good points wanted, and the common defect, and perhaps more noticeable than any other, is lack of size, and lack of strong, vigorous constitution.

This goes to show that, if line-breeding is to be taken up in the perfecting of a strain of birds, and no strain can be built up without it, it becomes a matter of the utmost importance to begin with as good a pair of birds as it is possible to procure, and free from any defects in body and constitution, for there will be enough to try your skill in eliminating the inherited defects and which will come to the light in successive breedings.

And in the selection of the foundation stock, I would use extraordinary care in the selection of the male bird, because his influence for good or bad is so great in line-breeding that too much attention cannot be paid to this matter.

If possible I would choose him from a strain whose blood lines were well known, and I would exact a pedigree from his breeder regarding his ancestry, and some description of the parent stock, and if the breeder was willing, a list of some of the early defects with which he had to battle before his strain became perfected. This will facilitate matters very much in the selection of future stock birds.

This is really where the originator of the strain has the advantage, because he knows his stock, and where another breeder would without hesitancy use a bird from this same strain that has some slight defect in body, limb or color, to mate to females of the same strain, the originator of the strain would look upon such a course as fatal to success, because that very defect, small as it is, has been one of the lines of combat, in his early struggles, and he knows that it does not take much encouragement to make it appear again.

The male bird must be bred back, and if there are any congenital defects, they will be aggravated in the second mating, for his own blood will be in preponderance. Thus it is easy to see why so much care is necessary in selecting the progenitor of your strain.

No strain can be built up on any other foundation, whatever

First prize Partridge Plymouth Rock pullet, Indianapolis, 1909. Bred, owned and exhibited by S. A. Nofztger, North Manchester, Ind.

may be said to the contrary, and in opposition to breeding a sire to his own daughters and a dam to her own son.

Near relationship of the germ-cells does not, as a matter of

course, render them unsuitable for mating. In and in breeding and line breeding differ only in parts. The one breeder knows what he does, and the other does not.

In and in breeding, or matings made up of blood relations, is therefore as such not a cause of trouble, providing we know that the stock is sound, and in good health and vigor, and without any inherited predisposition to disease, for all authorities on the subject agree in the matter, that the danger of mating animals of any kind consists principally in the fact that it occasions an accumulation of unfavorable hereditary predispositions in one individual, and that is what students of hereditary science call potential heredity.

We know of several breeders who for years have pursued only one method, and that of picking out from their flock the cream of it to use for breeding purposes, health in abundance being one of the chief points of the selection, and this has been done without the slightest regard as to blood relationship, and stronger and better stock for productiveness is hard to find, and after all has been said, this is the only way that Nature keeps up race characteristics, and strong, robust health and potentiality.

We have learned to know by a dearly purchased experience that new blood may be as vicious in its influence on a good flock as the introduction of a foul disease into a community, and so when from a fancier's standpoint this becomes necessary the greatest caution is to be used.

It is in the increased desire on the part of breeders, in an age of strong competition, to produce either in excess, or in beauty, some desirable features that make them lose sight of the fact that all stock that does not excel in strong and robust health is not suitable for perpetuation, and so as the law is lost sight of a strain is the result that may excel in those particular points, but at the cost of diminished sexual functions, or even impotence, and in the females decreased fruitfulness, and throughout the whole strain a sort of overdelicacy becomes apparent.

Family breeding, or line-breeding, is therefore looked upon as a successful remedy in order to guard against degeneration, and when rightly carried on the strength, vigor and purity of the strain can be maintained for many years without the introduction of new blood.

Another very important matter regarding line-breeding, and that is too valuable to be lost sight of, is the climatic conditions and their influence upon stock as a blood renewer, and which is well known among line breeders, namely, to select some fine specimen when half grown and send to a friend in some other part of the country, and when the bird is wanted for breeding have him returned.

As to the methods of line-breeding in existence, there are a number of different charts by different breeders, but we have failed to see any improvements upon the Felch Breeding Chart, for most of them are simply modifications of it, and sometimes little more than a steal. We therefore present to readers the original chart, and quote what Mr. Felch himself has to say regarding it:

"You may fail to see the meaning of the solid and dotted lines of the chart. To make it clear, we say, each dotted line represents the female as having been selected from the upper group, while the solid line shows the male as having been taken from the indicated upper group.

"Each circle represents the progeny. To wit: Female No. 1 mated with male No. 2 have produced group No. 3, which is half the blood of sire and dam.

"Females from group No. 3, mated back to their own sire No. 2, have produced group No. 5, which is three-quarters of the blood of the sire, No. 2, and one-quarter of the blood of the sire.

"A male from group No. 3, mated back to his own dam, No. 1, produces group No. 4, which is three-quarters of the blood of the dam, No. 1, and one-quarter the blood of the sire.

"Again we select a cockerel from group 5 and a pullet from group 4, or vice versa, which will produce group 7, which is mathematically half the blood of each original pair, No. 1 and No. 2.

"This is a second step toward producing a new strain.

"Females from No. 5 mated back to the original male, No. 2, produce group 8, that are seven-eighths the blood of No. 2, and a cockerel from No. 4 mated back to the original dam, No. 1, produces group No. 6, that is seven-eighths of the blood of the original dam and only one-eighth of the blood of the original sire.

"Again we select a male from No. 8 and females from No. 6 and for a third time produce chicks (in group No. 11) that are half the blood of the original pair.

"This is the third step and the ninth mating in securing complete breeding of our new strain.

"In all this we have not broken the line of sires, for everyone

has come from a group in which the preponderance of blood was that of the original sire.

"No. 2, 8, 13 and 18 are virtually the blood of No. 2. We have reached a point where we would establish a male line whose blood is virtually that of the original dam, and we now select from No. 6 a male which we mate with a female from No. 4 and produce group No. 9, which is thirteen-sixteenths that of the original dam, No. 1, and three-sixteenths the blood of the original sire.

"Again we select a male from No. 9 and a female of the new strain, No. 11, and produce group 14, which becomes twenty-one-thirty-seconds of the blood of the original dam, thus preserving her strain of blood.

"A male from No. 13, which is thirteen-sixteenth the blood of the original sire, No. 2, mated to females from No. 10, which are five-sixteenths the blood of the original sire, No. 2, gives us group 17, which is nine-sixteenths the blood of said sire.

"While in No. 16 we have the new strain and in No. 18 the strain of our original sire, we can go on breeding for all time to come.

"Remember that each dotted line is a female selection and each solid line the male selection."

Now retracing to our first statements regarding the choice of breeding birds wherewith to begin our strain it is easily seen that without careful selection line-breeding could not become a success, but where such selection is carefully and considerably

A PEN OF KELLERSTRASS WHITE ORPINGTONS.

made, line-breeding becomes a factor that cannot be disregarded in the production of a strain in which high qualities of productiveness as well as the fancy points is desired.

We forgot to mention that the sire selected for our foundation should come from a female, about which we are absolutely certain that she is a first-class producing female.

Formerly little attention was paid to the sire in this respect, but experience has taught us that if a line of strong and steady egg producers is wanted, this is a matter of the very greatest importance, and cannot be lightly considered.

In summing up this part of our treatise let us remember:

1. Interbreeding necessitates strong and vigorous ancestors, possessing as many and as strong qualities as possible. As the number of years a strain has been interbred will fix the bad as well as the good qualities.

2. That the summing up of evidence for or against the introduction of new blood goes to show that regeneration becomes absolutely necessary some time or another.

3. That close interbreeding carried on for too long a time will result in loss of size, constitutional vigor and fertility, sometimes accompanied by a tendency to malformation in the progeny.

4. That interbreeding is a valuable aid in improving the breeds of poultry, if used discreetly, and with a full knowledge of its effects, but in careless and ignorant hands hastens the deterioration of otherwise good stock.

WHO'S WHO IN HENDOM

The Bantam Kings! What a cute little title!

They reign over a kingdom all their own and dispute their domain with never a soul. As fanciers they are kings of the realm and as contestants for getting the most fun out of the game they hold more than an even break to their credit. Though the birds they worship are more adorable than the sacred geese of Egypt, yet the priests of the temples in that far off and woe-begone country have never seen these feathered midgets.

Wherever two bantam fans get together, there is held a meeting of kindred souls. They soar and soar away 'mongst the clouds of the purest fancy, while the rest of us have our heels on the ground and cannot even see the clouds, owing to our pecuniary interests in the gallinaceous bipeds we are grooming and pampering that tomorrow they may lay two eggs where they laid one today, and that their chicks may make two pounds of gain from one pound of feed! Oh, you practical breeders! While you are mixed up with the sordid ways and means of getting the lucre started your way, the fanciers of bantams are revelling in the dreams that prelude their breeding birds absolutely true to feather from one mating and winning all they show for among the hottest classes.

Did you ever note that bantams brought the millionaires and the laboring man together on an equal basis? Did you ever see a plute arm in arm with a man of the soil save in the bantam alley of big shows? Did you ever—But hold! Of course you didn't.

Now there is Prideaux. He sometimes stands alone in the alley and wonders why some one does not turn up who will give him competition. It is the same wonderment as fills the white race today with reference to the vanquisher of Jack Johnson. Prideaux goes ahead year after year, producing the best birds in Partridge Cochin bantams, and there is none to say him nay. He wins, hauls home the prizes, breeds more winners to haul home more prizes and then breeds still better ones. We old rounders who follow the shows watch his exhibit every season and wonder. So do the others. He is invincible.

And he has chosen to ride the hobby that takes the eye of everyone who knows a Langshan from Hewes Farm from a dirigible airship hanging in the tree tops. The little Partridge Cochin bantam is a beauty and no mistake. It is the bright colored little bantam that takes the eye. Some eyes it takes further and some less and some it brings back. The eye of the fancier it takes because it is one of the most difficult to breed. To the eye of the utility crank who wants to keep a dozen layers in the space that an S. C. B. L. pullet requires to stretch her legs, the Partridge appeals because it is warmly feathered for winter and has hardiness enough to make it an all season layer.

Prideaux is known at home and then some. He is known as the Partridge king. Just the same as you or I would be known as the king of the Looploopyas in the middle of the Pacific, providing that we could subdue them Rooseveltian shots, so is Prideaux known as the prince of the realm he wields the wand over. He conquered the breed by study and assimilation. That is to say, he assimilated all the current knowledge and tucked it away as learning and then went in and rolled up his sleeves and got some real, dyed in the wool KNOWLEDGE at first hand by breeding them and mating his matings for better or for worse. Now chicken lore garnered in this manner stays with a fellow like a cornmeal flapjack does on a bear hunt. You simply cannot shake it. It is a part of your cosmos and will never leave. It is this sort of chicken-knowledge-flapjacks that have made such men as the Rock kings, Wyandotte kings, et cetera, all the other little kinglets we might proceed to designate.

And this is how Prideaux stays put at the top. I cannot explain it in any better manner, for I have been schooled by Tom McGrew, who hides his meaning under a brush-pile of truths.

It does seem queer that the bantam contingency finds its greatest splendor in the confines of the North. Canada is colder than Wisconsin by some steen degrees of chilliness when the boreal winds burst out of the land of the huskies and icebergs. But bantams grow and thrive there because the hearts that encourage them are warm and tender and the hands that foster them are soft and silken. Billy McNeal, the Chanticleer of the bantam contingent that swoops down on H. V. Crawford with a special car to get the money in, holds the whip hand in the fancy in Canada.

I heard him make a quiet little speech once in St. Louey, in which he stated that he had made a lot of money in the bantam and

other chicken breeding business. W. W. Henderson said that he knew there was money in the game, because he had been putting it into the business ever since he could remember, or words to that effect. It raised a great laugh. Henderson can get a good hand any time he makes a speech. McNeal said he did not know whether some of Henderson's was what he had been taking out or not, but supposed it was, as Henderson was the only man he ever heard say that he had put anything into the business. Then McNeal wound up and rung off his little gem of a speech by terminating it with a soft pedal appeal for more fanciers and lovers of poultry than men who were or would go into it for the simoleons they might get from the fire. One could see that Billy was a lover of the feathered creature because there was a something in his heart that he could not analyze which made him breed them and show them and exchange intimacies with other fanciers.

McNeal is wrapped up in his bantams. He loves the Rose Comb Blacks just as much as the Cochins. The Polish get no more attention than the Game bantams. One is as leave in his heart as the other, for he loves them all. You can see it sticking out of his eyes. It radiates from him. He believes in them and they know him for a friend.

This world is a good place to live in!

I feel that way today, anyhow. I've had fried chicken, browned to a turn and then smothered in the dripping pans like Divinia's wife disintegrates them for the stomach, an Ole Virginny cheroot between my teeth to top off with and my typewriter. I forgot the new potatoes and green peas which the city man pays forty cents for and which cost me forty seconds.

John Robinson would have added a copy of Heck's book and had a feast. Theo., the man we look to now as the hope of the white race, might have put in a couple of watermelons. Hank Schwab would have wanted seven ears of perfectly right Evergreen corn to have made out a dinner, and Dick Richards would have liked a couple of lobsters and a small portion, say fifteen or twenty, stuffed olives. Thanks. Curtis would have said that a few scalps would have settled the thing just right with him, while Hicks could have added the presidency of the A. P. A. and eaten it with relish.

But let's get back to bantams.

I started out to tell what a good world it was to live in and was going to add when one had such an assortment of fine bantams as Fenn, of Delavan, has, just at the time those rude people above butted in. Fenn has a great location, and a great layout. His place has been for years the Mecca of the middle West fancier who doted on bantams. He shows at the best shows in his section and folks wonder how he can breed so many and breed such good ones.

There is no secret about it. He has a grand lot of birds to breed from, gives them the right sort of surroundings, and they do the rest. The fine middle summer weather of his part of Wisconsin has much to do with the success of his hatching season. The crisp falls fluff out his Cochin birds beautifully

PRIZE ARTICLE DEPARTMENT

We would like to have all of our readers compete for the prizes offered each month in this department. Send as many articles each month as you desire. For the best article we will pay \$3.00 and for the second best \$2.00. Make your communications about a column in length, which is about 600 words. They should be timely and appropriate to the season. Articles describing appliances and houses and accompanied by rough drawings are especially desirable. All the communications must be accompanied by a letter stating that they have been sent in for competition in the Prize Article Department. All articles must be written on one side of the paper only. Articles received after the 15th of the month will be too late for competition in the month following, but will be entered the next month. No manuscript will be returned, but all who send meritorious articles will be given a year's subscription to AMERICAN POULTRY JOURNAL, whether the article is published or not.

The first prize in the contest this month has been awarded to H. H. Scott, Sinks Grove, W. Va., and the second prize to N. P. Harris, Salem, Mass.

THE MOULT.

OUR poultry will for some six to eight weeks substitute the production of feathers in place of eggs, and longer too if they are not given proper care. While some force a moult, it is not practiced on our plant, as we have tested the force method and compared results with a natural moult, and the natural moult has given much better results.

For the force process the poultry must be fed a small amount of food for ten days to two weeks; this being the case the results are an abrupt shortage in the egg basket, which is two weeks before moult starts. When we do get the

results the poultry is in a low condition, the reverse from what they should be, as all vitality obtainable is needed to aid them in growing a new coat of feathers, while the only benefit is that they are through the moult before cold weather; that is, if we begin the process the first of July; if not, they will be as late as if allowed to go through a natural moult, as to force a moult takes about three weeks longer than a natural one, as two weeks are lost preparing and some time in getting them recruited from their fasting preparation, while if allowed to go through a natural moult they will continue to lay until they begin to grow new feathers, and will grow a coat of feathers quicker than when they have been starved, and will begin to lay shortly after plumage is complete. Some few will continue to lay while moulting, if fed properly. This feed question is overlooked by many, especially if poultry is kept as only a side issue, for they quit laying when moult starts, and when laying stops interest is lost, which, however, is the time they need attention and feed most.

If allowed free range they will balance their ration to a certain extent favorable to growing feathers, but if confined they must be fed with foods which contain properties favorable to growing feathers, which must contain large quantities of oils. Our feed during the moulting period (which usually commences about August 1st) consists of the following for whole grains, which is fed in shallow litters: Two parts sunflower seed, one part wheat and one part corn. As much of this is given as they will clean up well. Unless they do work it well out of litter it furnishes feed for mice and rats, which are a great nuisance unless you have cement floors. Besides the above there is kept in hoppers before them at all times the following mixture: Two parts linseed meal, one part wheat bran and one part beef scraps. Grit and fresh water is supplied in abundance. (Water is supplied by a running brook.)

On this ration we lose about two months with the majority of the flock, but some few will continue to lay while moulting. Especially is this the case with the White Wyandottes. We have them down to business again by October 1, before cold weather.

All hens that are not wanted for next season will be sent to market about July 15, thus losing no time, while hens are generally a better price at this time than a little later.

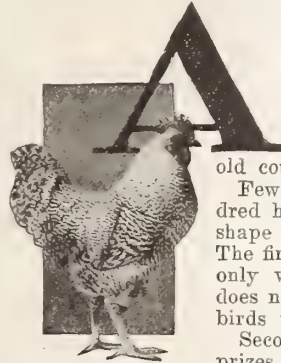

In case there is trouble with pullets moulting, this can only be prevented by regular feeding, not too heavy, gradually increasing as weather grows cooler, so as not to let them go down in condition, but there will be but little trouble if hatching is not commenced before March 15 with the large breeds and April 15 with the small breeds. However, in one case we had a hatch of 125 White Wyandottes to come off April 1, which were fed forcing feed consisting of wheat bran, crushed oats, beef scraps and whole wheat, having free range, which when

about six months old began to lay and laid for about six weeks, when they began to moult. These pullets were loafers, or star boarders, as we might call them, for about two months or until February 15, while if they had been fed properly or not have been hatched for two weeks later all probabilities are that they would not have moulted until the following fall and would not have been any longer commencing to lay than hatch was delayed.

H. H. Scott.

Sinks Grove, W. Va.

WHY FARMERS KEEP MONGRELS.

SUBJECT much discussed, but little written about. Fewer farmers keep mongrels now than in the past, but I think this article will not be out of place.

By the word "Farmers" I mean not the educated farmer, but the old country farmer.

Few farmers have over fifty or a hundred hens, rarely with two alike in color, shape or name. Why is this catastrophe? The first reason is this: Because a farmer only wishes eggs for his own use. He does not wish to put any more time on his birds than is absolutely necessary.

Second: He cares nothing for shows or prizes and really gives them very little thought, if any. He says that he sees no good in these things, for it does not make the hens lay any better.

Thoroughbreds, although they need clean, well-kept houses, do not require so very much time, perhaps not more than fifteen or twenty minutes each day. A farmer's hen house is rarely ever seen clean, or at least I never saw one. It is usually dusty, dirty, the roosts in any place, often without dropping-boards underneath, barrels and boxes for nests. Although these are all right, they are not the best. Dirty windows, covered with cobwebs, keeping out the much-desired sun, and everything in a clutter.

Third: A farmer does not raise broilers for market, but raises chickens, and when he wants one for his dinner just kills one off, and these chickens are doubtless as good as thoroughbred chickens.

Fourth: He does not wish to raise hens for profit other than just making them pay, and I should doubt very much if many farmers ever know whether their hens are paying or not. A farmer is in many respects like a department store. For instance, a farmer raises corn, hay, beans, peas, potatoes and all sorts of vegetables, and hens; the different vegetables receiving an equal amount of attention, while the hens come out the little side of the horn. He does not deal in one thing and perfect it. The same with a department store. They have almost everything one can think of, but not leading the city or town, state, country or world in one thing, which, if they did, no doubt would make double what they do at present. Usually they obtain the best they can for the cheapest. And so, likewise, with hens. The cheapest are mongrels, and not having the time to put on them, they keep mongrels.

Fifth: A farmer never wastes much love over his birds, and who would over mongrels? Some farmers do not care for hens at all, but for all that one rarely sees a farm without a hen on it. If a farmer does not love his hens, why should he waste any time on them? He could not get so much out of them, thoroughbred or not, as one who loved their birds. A farmer would not waste time in trying to solve what was the best feed for them or give them greens, except in the swill, or go out and dig a few worms for them. A thoroughbred needs this kind of treatment, especially prize birds. Therefore the conclusion is, if they can not, or will not, or do not, wish to give the time, why should they have anything but mongrels? One must work for what even they obtain today, and so with hens, one cannot obtain something for nothing.

I will now just say a word why they should not keep mongrels. If a farmer did have thoroughbred stock they could sell their eggs for one dollar and up instead of twenty-five cents a dozen. They could exhibit, perhaps capture prizes, become prominent, and not only help themselves but poultrydom besides.

They could raise broilers and send them into market, reaping a fine profit on them.

I know already many farmers have left their mongrels and are now keeping thoroughbreds, who before could not waste any time on them; are now keeping their houses clean and giving regular feedings, and thoroughly enjoying their hens. I hope the time is not far distant when mongrels will become unknown.

Henry G. Eisert,
Notary Public.

OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

Change in Date of A. P. A. Meeting

For some unaccountable reason the date of holding the annual meeting of the American Poultry Association has been changed from the second to the third week in August. This will be very disappointing to the large majority who voted for the second week, and goes to show that the majority does not rule in matters pertaining to the A. P. A. We trust, however, that this change of date will not have the effect of reducing the attendance at this meeting.

Mr. Steinmesch writes: "From information at hand it is quite certain that the 35th annual meeting of the American Poultry Association at St. Louis, August 15 to 20, 1910, will be the largest ever held by the association. In this connection we should give the widest publicity possible to the fact that the meeting is free and open to all, and we especially invite nonmembers to be with us for a day or a week. Many chicken people seem to be under the impression that only members of the American Poultry Association will be allowed to attend, but such is not the case. We welcome all who are interested, and hope to make many converts."

Mail Vote on Amendments

One of the proposed amendments has for its object a more full share of power to give to all members of the American Poultry Association who are not able to get to the annual meeting. The member of the north Atlantic coast is as liable to be interested in the amendments which arise as the member who resides in the city where the annual meeting is held. But as a rule the members who live farthest from the meeting place cannot afford the time or money to make the trip and hence their membership and opinion count as nothing in making the laws by which the officers shall be guided. We are all allowed a vote in the elec-

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide circulation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

tions. We have a vote in the meeting place. Why cannot we all have a vote in the rules or amendments which govern the officers we elect? The man with the ballot is the man with the backbone of the association in his hand. He is the man who maintains interest in its affairs.

One of the things that a member gets for his membership fee is a vote. If we do not give the vote more power, or else get ourselves on a delegate basis, each state a branch that is allowed a delegate in the annual meeting, we are curtailing the reforms of the body we all want to make greater. There have been a lot of things done in the association which would not have been done if the matter was left to a vote of all the members rather than by a handful who had the time and superfluous coin to attend the annual meeting.

Secrets of Success

When you buy high priced eggs remember to give the chicks the best of care, keep the coops clean, and the coops and chicks free from lice. Divide them in small flocks so they can't crowd at night and sweat all the vitality and strength out of them.

Give them cool, fresh water, a variety of food, and keep them growing from the start.

Remember it is only by doing this that it is possible "to get all out of the chicks that the original breeder bred into them." If you don't do this and allow them to become lousy, puny, stunted chicks they won't develop either size or shape and they won't have the necessary pigment coloring matter in them to color up their feathers, and they will come in white or partially white, according to the degree of debility in the chick. If you do this don't blame the breeder from whom you bought the eggs and call him a fraud and condemn his stock.

I tell you, chicks from the best bred fowls on earth can be made the rankest culls by neglecting them and stunting

them by poor care. You know there is always one chick that develops faster than the rest. You are always proud of it. It puts out a comb first, gets a bright red face and develops wattles. It always has a good coat of feathers and every visitor speaks of it, "Ain't it a dandy?"

Of course it is. It has always been in the pink of condition and you got out of it all the good breeding put into it. Try and raise them all that way. Be sure and separate chicks of different sizes, otherwise the larger ones will eat up the feed from the smaller ones and run over them so they will never mature properly.

Keep them in small flocks. Change their coops to new ground often or spade up the ground if in limited quarters.

Remember, it is not how many you raise but how good. Remember, it only takes one bird a little better than the rest to win first prize, and that means success. Hence I say give your chicks extra good care that you may get all the good qualities out of your chick that was bred into them. Herein lies success.

The Licensing Muddle

The American Poultry Journal has predicted the failure of any as yet devised system of licensing judging. The further we go into this thing the more willingly we want to get out of it. It looks to us that about as far as the A. P. A. can go is to censure judges and give them a hauling over the coals, if they be members, after they have committed flagrantcies in the positions they have been entrusted with. The A. P. A. cannot make good judges. It cannot make itself popular by trying to attach a fee to licenses and in other ways tax one coming and going and resting.

If there are to be licenses, then there will be charges of gross indiscretion heaped upon those who allow the licenses and who take the examinations. Let the A. P. A. devote as much work to the

regulating of express rates and the securing of a parcels post as it does to worrying about licenses for judges and there will be some good accomplished. Just where the line is to be drawn for those who shall and shall not take the examinations, that is another problem that would entail a lot of bitterness. Poor judges have broken into the game since Felch was a child. They have tumbled out of it, too. They could not remain because the license of popular opinion was all against them. To be a judge one must be a "natural born" chicken man and that is all there is to it, especially if we allow the rank and file of the membership of the A. P. A. to decide. Put this series of judging and examination amendments up to the rank and file of votes for a mail vote and it would get killed as quick as Kelley's cat on a midnight rampage.

Columbian Plymouth Rocks

Among the several varieties that will ask for admission to the Standard at the coming A. P. A. meeting at St. Louis in August are the Columbian Plymouth Rocks.

Of all so-called new varieties, none has ever won popular favor, or has in the same time shown such wonderful improvement in both type and breeding quality, as have the Columbian Plymouth Rocks. Their merit along these lines, at this early day, entitle them to favorable consideration, for when birds can be bred true to type as well as color qualifications they have the right to demand consideration, for their place is a prominent one.

There is always room for a variety with real quality. The poultry field is larger and the demand is for substantial variety, a place the Columbian Plymouth Rocks will fill. It has been our privilege to handle this variety at several shows the past few years, and we have noted in particular their line of quality and the improvement made in type and color. It is upon this evidence that we place our hope that the members of the A. P. A. will approve their application.

At the last Buffalo show the class of this variety was very large and the quality all that could be desired. The first prize cock was a bird of exceptional merit. In type he was one of the best

So you're Mr. Sherman Luttrell, from Waverly, Ill., and you raise Buff and Black Orpingtons. Wall, I guess they are a good breed, no doubt about that, but Martha and I thought we would try the R. C. Reds and we sent to Mr. A. G. Clark and got some eggs from his Practical Reds. He has a strain what not only wins the blue ribbons at the big shows but also has great utility qualities, being extra long bodied and great layers. Martha weighed some last night, they weighed one-half a pound and only three weeks old. Our common chicks won't average mor'n one-fourth pound fer same age.

Yes, we feed 'em on Alpha Meal whats advertised in the American Poultry Journal and it do beat all how they dew grow.

You say you been readin' the A. P. J. for ten years and that's where you learned how to raise your prize winners and now you advertise in it and sell all you can raise.

Wall, that's jes what Martha and me tend to dew. We read it every night an' are learning a heap. We are well pleased with Mr. Clark's Reds, got thirteen chicks from fifteen eggs.

Wall, perhaps, if they turn out right we'll show 'em at the Fair. Any how, we'll see you there. Good-bye, Mr. Luttrell. (Continued in our next.)

Plymouth Rocks we have seen, his color and markings also of a high and choice quality. Other males and most all the females were on a par and of the best of quality, making one of the select classes at this great show.

The Columbian Plymouth Rock Club is wide awake to its every interest. To date about 100 members are enrolled and they have just issued a catalogue that is not only a work of printer's art, but a book of interest and value that should be in the hands of every interested person.

The club officers are: President, D. M. Green, Syracuse, N. Y.; vice president, F. M. Clemens, Mechanicsburg, O.; secretary and treasurer, Dr. E. B. Kaple, Elbridge, N. Y. H. P. Schwab.

Mr. Buschmann Consents

After repeated solicitations by prominent Rhode Island Red breeders, C. L. Buschmann, Indianapolis, Ind., has finally consented to make the race for vice-president of the Rhode Island Red Club of America. It will certainly be to the interests of the club and the breed in general to elect Mr. Buschmann to this office.

He is vice-president and general manager of one of the largest factories in Indianapolis, also treasurer of a large life insurance company and vice-president of the Fanciers' Association of Indiana. He is also identified with other large associations.

He has just purchased a farm of 108

YOUNG'S STRAIN S. C. W. LEGHORNS

I HAVE NO OTHER BREEDS. It is acknowledged the world over as the greatest laying and exhibition strain. Eggs at half price from now on.

Big Bargains in Reliable Breeders

The breeding season of 1910 is about at an end and we find we have by far the best lot of absolutely reliable line-bred breeding birds we ever had or expected to have. The birds of mediocre class have long since been disposed of and all we have left are the very best specimens of our last two years of breeding. These we offer way below their actual value as breeders merely. All are line-bred for so many years back that they can not fail to produce the A1 exhibition quality that wins at AMERICA'S LEADING SHOWS. The list includes many of our MADISON SQUARE GARDEN, NEW YORK, WINNERS, of which we have a far greater supply than any of our competitors. WRITE FOR PARTICULARS of this greatest sale of

acres and will start to build this fall, the largest and most exclusive Rhode Island Red farm in the world.

\$90,000 Appropriated for New York

New York has gone Missouri one better and secured an appropriation of \$90,000 for a poultry building.

This simply shows what it is possible to accomplish when gone about in the right manner. The importance of the poultry industry is only beginning to be recognized and the breeders in other states should join in a united effort to secure larger and larger appropriations each year. Once you get things started the interest will increase and soon the effects will be noticeable throughout the country.

Colorado Organizes a State Branch

Reese V. Hick, assisted by local breeders from Colorado, have just organized a big branch of the A. P. A. in Denver, having nearly 100 members. They are certainly getting awake out West and are showing us how to do things.

In Ohio, for instance, a bill asking for an appropriation of money for the State University was turned down. This is to be regretted and Ohio members should get together and elect men who know their needs and who will make appropriations.

Mr. Lamon Accepts Position With Uncle Sam

Harry Lamon, who has been special representative for American Poultry Journal the past season, has accepted a position with the United States government and is at present located in Kansas, doing special research work on the market end of the poultry industry. Mr. Lamon is well qualified for this work, as he is thoroughly familiar with all phases of the poultry business.

Public Notice

Notice is hereby given to our subscribers that we have discontinued the advertising of the Culver Poultry Farm, Benson, Neb., as we consider the proprietor of this farm unworthy and unreliable.

Of Interest to Illinois Members of the A. P. A.

Theodore Hewes has a long article in July issue of the Inland, in which he tells you why Illinois should not withdraw from the mid-west branch and organize a state branch of her own. Mr. Hewes in a very pathetic manner asks you not to disrupt the only peaceful organization in the association. Why is the mid-west so peaceful? Simply because you are not alive to your own interests. Certainly if you sit back, say nothing, ask for nothing, do nothing, but let the men in office run things to suit themselves, there will be peace.

But when you do wake up and ask for your rights, those who in some manner have been profiting by your lack of interest are going to object.

Mr. Hewes also states the creating of a lot of new officers may create jealousy and dissatisfaction. Now, this is a reflection on every member from Illinois.

I contend we have men here in Illinois as liberal, broad-minded and as capable of running our state branch as can be found in any state in the Union. Don't you agree with me? As for his statement, the mid-west was to stick together for five years if it was possible. This is not binding, as it was not incorporated in the constitution, and the few men who organized could not see how large we would grow before the five years had passed.

The mid-west was the first branch to organize and was an experiment. They thought it would take five states to make it a success. Now we see most any state can have a successful branch. These men had no right to bind us up for five years when they could not see the changed conditions that would come up.

Such a proceeding is characteristic of ward politics and is never carried out in organizations where members are supposed to have a voice in their management. In any event such unjust and unreasonable policies cannot be binding unless incorporated in the constitution and bylaws, which is not the case in this instance.

We have no desire to disrupt the mid-west branch if it is so great and mighty it can exist without us. Surely we are not the whole works. Just let us have an Illinois state branch, and let the rest go on as before.

I contend the mid-west has become an unwieldy body, and the present proxy system, which gives some sixty-four votes to its representative, gives one man too much power.

For instance, there was only some 200 members present at the last A. P. A. meeting. Supposing 125 were against a certain proposition, and then the sixty-four mid-west proxies were voted with the minority; they would carry the motion, even though five-eighths of those present were opposed to it. Do you call that a representative meeting? Do you call that justice? Do you know if you stay at home that the mid-west representative has, without getting your consent, one proxy vote for every five absent members, and that he will have about sixty-four proxies to vote at St. Louis?

If we have a state branch a man from Illinois will vote your proxies; then you have representation from your own state, and the mid-west representative will have about fifteen proxies less.

Mr. Hewes says the mid-west branch canvasses the members present. Well, I know several members who knew nothing about this and were not canvassed at any time during the last meeting.

If you have an Illinois state branch your president will become a member of the executive board of the A. P. A., and you then have Illinois represented by a man from Illinois also at the annual A. P. A. conventions. At present you could only get this by having a president of the mid-west elected from Illinois, and this you never had. Besides, with a state branch you get the gold and silver medals and A. P. A. diplomas every year instead of once in five years, as at present, and you haven't even had them yet. Is Illinois so insignificant she should be put off till last? Mr. Hewes says Indiana, Michigan, Iowa and this year Wisconsin will have had the medals, diplomas and institute, and Iowa and Wisconsin \$200 cash in addition. You see Illinois comes in last.

Mr. Hewes tells you if you want additional officers, to get busy and elect them; even suggests that the writer or Mr. Heck would be acceptable to him as president of the mid-west. I wish to state I am not or will not be a candidate for any office in the Illinois state branch. I know I have been accused of being mercenary, but such is not the case. Let the officers be the best men fitted to hold them and scattered throughout the state so all parts have representation. Then all get busy and get in new members, and we will soon have \$200 cash in the treasury. All the members from Illinois who are sufficiently interested to reply to a letter when a self-addressed and stamped envelope is enclosed, want an Illinois branch with one exception, and he did not even sign his name.

Many of them write very strong letters in favor of it, and many have gone to work securing new members for the state branch. I think we have fifteen in view, and more to hear from. This number would put \$75 in our treasury. I guess this looks like some good would result from Illinois having a state branch.

Mr. Hewes tells you I was not a member when the mid-west was organized. That is true. I joined about three years ago, and I gave my \$10 to Mr. Hewes. He has long forgotten that. I was not solicited for it, either. I had wanted to join for some time. But what has that got to do with it? Am I not a member and entitled to all the privileges? Is there any number of years of probation before one has a right to think, speak or act? I think not.

Mr. Hewes tells you the mid-west always has the best reports at the A. P. A. meetings.

Now, why should not the mid-west branch have the best report of any branch? Hasn't it five good big states to contribute to its treasury? Certainly it ought to have money in its treasury and make the best report, and Illinois has contributed more than any other state, and we have not gotten any of it back, either.

Now we want a local organization and state representation both on the executive board and at the annual A. P. A. meetings. We want a big state branch, and keep our money here at home and spend it as we see fit, and also have the medals and diplomas every year.

The Reasons for An Illinois Branch of the American Poultry Association.

Because it would result in greater good to the American Poultry Association.

Because it would result in greater good to the Illinois members of the American Poultry Association.

Because it would mean more money to be given to Illinois poultry shows for prizes.

Because the American Poultry Association medals, diplomas, cups, etc., would be offered at some Illinois show every year instead of once in five years, as at present.

Because Illinois should not be forced to contribute to the support of other states by dividing its revenue with them and being tied up with them.

Because the interests of Illinois breeders require closer individual effort which would be derived from their personal management of an Illinois branch, and which cannot be derived from the

management of other breeders in other states with which Illinois is now combined.

Because the money received from the American Poultry Association for new Illinois members should go to Illinois and not to other states, as it does now.

Because other states of much less importance than Illinois have state branches.

Because it is a reflection on the en-

terprise and state pride of Illinois members that they allow so great a state to occupy a position so far behind others of less importance.

Because there is no cost to anyone in connection with the organization of a state branch.

Because no one man should have so much power.

Because more poultrymen from Illinois would become members of the

WHAT THE "HALL" EQUIPMENT WOULD MEAN TO YOU

CARL J. CARTER

PAUL C. GREEN

HUBERT E. COSBY

BLUE RIBBON POULTRY FARM

S. C. Black Orpingtons, exclusively
COLUMBUS, INDIANA

June 10th, 1910.

The Hall Mammoth Incubator Co., Utica, N. Y.

Gentlemen:—

We are just closing a very successful season with your Hall Mammoth Incubator, 6000 egg capacity, and Hall Brooding System.

For simplicity, thoroughness and economy they are ahead of anything on the market for artificial incubation and brooding.

In fact we prefer the chicks hatched in your machine to the hen-hatched chicks. The point that especially pleases us is the finish to the chicks as they leave the shell and the hardiness they show when placed in the brooder.

We find the brooder a veritable mother, no oil fumes or foul air. Perfect ventilation all the time and our chicks have feathered fully as well as the hen-brooded chicks.

We have fully paid for our machine the first season with custom hatching and baby chick trade, besides have some two thousand splendid Single Comb Black Orpingtons for our trouble.

We run your incubator with less expense and labor than we did two small incubators with 240 egg capacity each, last season.

Assuring you that we will be back to enlarge our machine another year, and wishing you well merited success, we beg to remain,

Very truly,

Blue Ribbon Poultry Farm, Columbus, Ind.

Why not consider the installation of the Hall Mammoth Incubator and the Hall Brooder System? Their installation would mean that you could figure your results with certainty,—that you could make next season's work and every season's work after that, just as successful as Blue Ribbon Poultry Farm's! The Hall Catalog is free.

NEW YORK : : CHICAGO

American Poultry Association if we had an Illinois branch.

Because one-half of the membership fees received by the American Poultry Association for new Illinois members would be paid right back to the Illinois branch for the benefit of Illinois members.

Because the state of Illinois deserves a greater and more influential voice in the management of the American Poultry Association affairs, and this can only be secured through an Illinois branch.

Because the president of our Illinois state branch would have a seat on the executive board of the A. P. A.

Because Illinois is great enough and big enough to have a branch of her own and not be tacked on to the tail of any association.

Because over one-half the Illinois A. P. A. members want a branch.

Because there is no good reason why we should not have an Illinois branch, and there is every reason why we should have one.

Mr. Hewes has himself admitted the advisability of our having a state branch, but he wants to put it off. Why should we put it off? If it is a good thing after while, it is a good thing now. I say now is the accepted time.

If you are not a member of the A. P. A., you should be. Better send me your application.

If you are a member and have not replied to my letters, you owe it to yourself to do so.

I hope we will have an Illinois state branch, and I wish we could get Theodore's consent and approval to it.

C. W. Zimmer.

Illinois State Poultry Association Meeting

The writer attended the big meeting held in the State House at Springfield on July 1.

The object of the meeting was to adopt a new constitution and bylaws, and the one presented certainly was a good one and showed much care on the part of those who framed it.

The meeting was called to order by President George Heyl, and harmony prevailed throughout the meeting.

Illinois has a unique method of organization in that they have each Congressional district organized with a district manager, appointed by the governor. Then they offer a substantial prize for the district manager who secures the most new members for the association.

Well, in this manner they have the boys all working, and maybe you think there is not something doing. Most of the meeting consisted of reports from these district managers, and it was truly wonderful the results that have been accomplished not only in new members, but in silver cups to be offered as special prizes.

We venture to say more silver cups will be offered this year at the Illinois state show than any other show in the country, among which is the governor's cup, value \$50.

Governor Deneen was present and addressed the meeting. He told us in a convincing way that he was favorable to a state appropriation for whatever amount was necessary. He compared the poultry products to the wheat, also the dairy products of the state, and

Taylor Instrument Companies

ROCHESTER, N. Y.

said any state official would be favorable to and assist the poultrymen when we showed them our industry was of sufficient importance to justify it. He said the producers of wheat and the dairymen had been well organized, and they had shown them the importance of their industry, and now they were receiving substantial assistance; that it was up to us poultrymen to do likewise, and we would receive assistance also.

It was decided to ask for an appropriation of \$10,000 to be used for experimental work at the state college, also \$1,200 per year for salary for a state show secretary and \$2,500 per year for premium money.

So you can readily see, with this amount of money behind us, we are going to have a bumper big state show at Springfield this winter. The show will be cooped in empire coops and held in the State Armory, which will accommodate 5,000 birds nicely, and it was decided to try and get out that many.

After the meeting we repaired to the hotel, where a banquet was spread, after which Colonel Mills, who acted as toastmaster, made a few remarks and then called on the following editors present, who responded with many encouraging remarks: Hewes, Heck, Zimmer, Coleman, Joos and Otewell. Professor Barto, Dean of the State College, also stated what he had been able to accomplish. He reported having seven pens of birds, and that the Rhode Island Reds were away in the lead. He said the college would appreciate donations of pens of poultry, so if you wish to help on the good work here is a chance.

After this the ladies were called on and Mrs. Kate Maxey made a few remarks, as did Miss McClare, who has raised over 1,700 chicks this year; which, by the way, are also Rhode Island Reds. The meeting then broke up with the determination well set on a 5,000-bird show.

So we are going to have a rousing big show at Springfield, and you had better decide now that you will show at Springfield, January 2 to 7, 1911—and what's more, you had better begin to get your birds ready right now if you expect to win any of the big money and handsome silver cups we will offer, because it is going to take good top-notch birds to win. Welcome, one and all!

C. W. Zimmer.

The fighting colonel was reminiscent. "Geese saved Rome," he began as he lit his black cigar, "and, gentlemen, at the battle of Bull Run my men were saved by a flock of chickens dying in front of them. It was the greatest coup of the battle, sir."

"That's pretty good, colonel," laughed the comedian boarder. "I suppose you would call that a chicken coup."

"You are charged with stealing nine of Colonel Henry's hens last night. Have you any witnesses?" asked the justice sternly.

"Nussah!" said Brother Jones humbly. "I 'specks I 'se sawtuh peculia dat-uh-way, but it ain't never been mah custom to tuke witnesses along when I goes out chicken stealin', suh."—Central Law Journal.

Robert H. Essex

QUIC-MOLT is a new Specific originated and now put on the market for the first time by the Model Incubator Company. It provides a means to surely get more money—much more money from your fowls by securing early egg production. Write today for full particulars, telling how to molt your fowls to get winter eggs.

QUIC-MOLT is also in great demand by Exhibitors who wish to make their show-birds feather fast. It was originated by Mr. Essex, long experienced in exhibiting, and fills the need that Exhibitors have so long felt. The only requisite is that you should begin to use **QUIC-MOLT** at once. This is the season for it. The difference between having your show-birds just fit and having them unready makes a big difference in your winnings. Write today for full particulars how to make your birds feather fast and have brighter plumage.

AT THIS SEASON you may need some Poultry Remedies. If your fowls have Chicken Pox, Colds, Roup, Diarrhoea, Scaly Leg, Gapes, or any other disease, you should write for our Free Laboratory Catalog which describes the diseases and gives the remedy. **Model Poultry Remedies** are also Preventatives. They are put up in our own Laboratory under the personal supervision of our Chief Chemist; and are the most reliable on the market. Ask for **Model Remedies** and accept no other kind. If your dealer does not keep them in stock, ask him to get them for you or write direct to us.

MODEL POULTRY SUPPLIES ARE SUPERIOR

Model Poultry Supplies are Superior, yet they cost no more than the ordinary kind. Let your Food Holders and Wall Founts be of good, heavy, galvanized iron, well made; especially when they cost no more than the low-grade, easily-bent kind. See below the list of goods we manufacture. Every article made in our own Factory or Laboratory is guaranteed.

ASK YOUR DEALER FOR MODEL POULTRY SUPPLIES—THE BEST

SUMMER SALE LIST—Free: Send for sale list giving description of 179 breeding males and females I am offering for sale. The choicest lot of breeders ever put on the market. Must be sold to make room for young stock. Price of eggs balance of season, \$2.50 per fifteen; \$4.50 per thirty; \$6 per forty-five.

John S. Martin, Box 51, Port Dover, Can.

FOR SALE: AN EGG FARM!

Owing to circumstances which can be readily explained, I am offering the following described egg farm for sale

About six acres of ground with dwelling house, open front poultry house for 1100 layers and breeders, cement incubator cellar, colony houses, brooders, incubators and all necessary fixtures included, nearly all of which are as good as new. All buildings erected during the past year. Also include about 300 S. C. W. Leghorn breeders and 400 or 500 pullets. Yards fenced, the finest of water, feed grinder, alfalfa cutter, etc., operated with a gasoline engine in a cement floored feed house 20x30 ft. Part of land is in alfalfa; plenty of peach, cherry and pear trees. Land adjoining can be purchased if party wishes to enlarge. Have a private egg trade in Denver. Farm is four blocks from C. B. & Q. depot. Will sell the above described property for \$5,875. If sale is made by the last of September and a reasonable payment is made, can make arrangements for time on balance. Address

WHO'S WHO IN HENDOM

(Continued from page 978)

and make all the stock very hardy. He has put a lot of time and work into his matings and can tell in advance what his results are going to be. His trade is good, for he is an original advertiser and knows how to care for business that is intrusted to him.

The bantam fancy in America has hardly reached the stage that it has in England. England is the home of the fancier. It is the land of the big general prices, and none make application to have one's sanity judged if he asks a hundred pounds sterling for a bird. Pigeons over there bring as high figures as the best of general purpose birds do here.

But with the drawback of our youth against us we still make up for it with the zest that we enter the fancy. We go in, head over eye-brows, for whatever strikes us. This is so of Clyde Proper, who hails from the Empire state. Proper has been in the bantam game ever since I have been brouching off the hope extended in the poultry journals. I cannot remember a time when Proper's name was not in the bantam contingent. He is the man who made the Yellow Kid Buff Cochin bantams popular. That's proper!

Then comes J. Tart Welch with his largest flock in the world strain of Light Brahma bantams. These little beauties are really as practical as they are beautiful. They can lay eggs the season through and provide a meat of tender and juicy sort, though they are not as large as geese. Between Welch and Line Orr and some of the others who swoop down on the Garden every winter, they have a hot time in the L. B. bantam alley.

The Yellow Jackets are a strain of Buff Cochin bantams sheltered at the Monroe Yards, Syracuse. Go down there to see these little beauties and the proprietor will talk your head off on the fine points to be kept track of in growing bantams. He will tell you that too much range is bad for the right length of leg; that too much feed is poor for the size, and that color has a lot to do with the way the judge places the awards.

Fox, Dr. W. Y., was the man who for years bore the brunt of the bantam work alone when it came to Cochin bantams. We have not heard from him for some time, but understand that he still loves the birds and keeps some of the best of them. Cornman is another of the men who once made bantams a hobby and incidentally won a lot of prizes with his bantams of all varieties.

Zim, better known as F. B. Zimmer, who, with Drev., used to be the whole show at the Garden, is one of the best bantam men in the country, but he has been breeding beagles for some years and just is getting started again with more midgets. Ira C. Keller is another of those whom we all know has some grand Sebrights. He shows with the boys all over the country and cops out some of the big money from time to time. Earl Roberts has a big string of bantams and is a formidable enemy in the classes where the other fellow shows. He is a regular dictionary of what is what in bantams and will probably be until they cart him over the hill.

In the days when the old American

Fancier was issued from Jamestown, we used to know a lot about A. E. Blunk & Co., but they seem to have dropped from sight. There are two bantam cranks springing up every season where one was before, and this is partly to blame for the great revival in them that we are now witnessing. Lots of folks do not know that there are Barred Rock bantams. Many have never heard of Rhode Island Red bantams. Thousands of fanciers have never seen the colored Japs, Dark Brahmas, White Dotte, Partridge Dotte, Brown Leghorn bantams. We in America know little of the great variety of these pets bred in England, Japan, Germany, France and other fancier countries. But they are bred in great profusion and in numbers.

Great are the Bantam kings! Hail!
A. B.

NOTES OF THE MONTH.

It looks to us as if Henry Steimmesch's proposed amendment had a "not" too many in it.

One thing is a cinch: We are going to quit paying a lot of needless expenses to officers who are not on duty. This is what is termed as trimming expenses coming and going.

From an English journal we learn that jarring doors on incubator houses and cellars are the cause of crippled chicks. We had thought that too much heat was the real cause. If the temperature is right, there need be no cripples.

Henry Albers out there in California

has invented a chicken louse powder that he calls Devil's Dust. Pretty classy!

Last month I said something about Jack Johnson retiring. My fore sight is not as good as my hind sight. Jack will not go into obscurity for many a moon. They say he is going to start a chicken farm right next to Jeffries' alfalfa ranch.

There is no valid reason why thoroughbred Games should not be in the Standard. They are one of the oldest, if not really the oldest, fowl that has had continuous attention (for thousands of years) regarding the purity of their breeding.

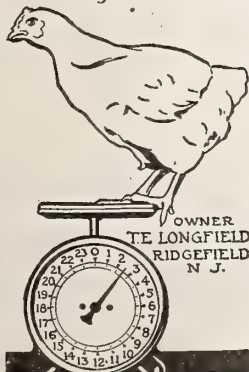

It seems that we made out that Purvis was a meaner man than he is. Last month we said something about him lambasting Quisenberry. He rises to explain and does explain to our satisfaction that he was tooth and nail for Tom in the last successful race he ran.

They do the chicken business out there in California in the thousands, while we are contented to handle it in hundreds. I note that one firm advertises that they want 5,000 pullets of the laying breeds. They will not have trouble getting them out there, for that is the home of the White Leghorn. Some day the Californians are going to ask that the White Leghorns have their name changed to White Californians.

Some of our western readers ask us what has become of Anna L. Pinkerton. It is about time that she gave us some of her Pacific coast poultry experiences.

At This Time of the Year There is No Substitute For Park & Pollard Growing Feed

Hatched
March 22, 1910
Weighed
May 22, 1910
Raised on
Park & Pollard
Growing Food
Can you beat it?

The more your hens weigh when you take them to market the more money for you.

An extra pound in weight and a bigger egg yield if you insist upon Park & Pollard Growing Feed.

That is why you cannot afford the "just as good" kind—a substitute. This month keep Park & Pollard Growing Feed where your hens can get at it all the time. Price \$2.25 per hundred pound bag. Dependable foods cannot be made for less money.

For other monthly hints and valuable poultry information write today for our Poultry Almanac, worth \$1.00, but absolutely free.

Ask Your Dealer

If he cannot supply you we will make special prices in five-bag lots. Send today anyway for samples.

Park & Pollard Co. 30 Canal and 139 Friend Sts.
Boston, Massachusetts

We have seen nothing of that publicity work that President Bryant's committee was to undertake. Of course, Reese gets in his work, but what of the balance of the workers?

Collier is doing his best to organize the state of Washington into an A. P. A. branch. The meeting to get things started will be held during the state fair this fall. Colorado has started in for a branch and it is but a matter of time before the A. P. A. will get on a representative delegate basis, with each delegate doing the bidding of his branch.

The agricultural department of Purdue University held an egg show recently, which was the hit of the season in university circles.

Poultry gives us a few samples of rotten express charges. We have all seen fragrances of this kind, but as long as we go ahead voting for congressmen who are hand in hand with the express robbers, and lend our influence to the election of senators whose office costs them ten times the salary they get out of it, we will have these rotten express-charge charges. First, let us all work for a parcels post. This will help to lower rates on many an article shipped by express.

The licenses for judges are going to get buried. It is the sentiment of the poultry fancy. Licenses will not make a judge do better work, nor will they keep the old timers who are doing good work out of a job. The license of popular opinion is the only.

It certainly looks like a big meeting

at St. Louey this year. The Poultry Item is trying to get easterners in its section stirred up in advance so that all can go in a body and have a car and possibly reduced rates.

It seems that the idea of the amendment proposed, that of having a mail vote on amendments to the constitution, is overlooked. Members have a vote in the election of officers and yet have nothing to say, unless they spend a nice two hundred or so to get to and from the annual meeting, about the rules and regulations that govern them. We believe that a mail vote on amendments would give a member a few more privileges. We know it would create a heavier vote and a lot more interest. It is about the same as the referendum and the recall that all us citizens are in favor of.

Topeka is spreading herself. They should hold a big show there and will if that staff of stockholders counts for anything.

Emma J. Mellette is contributing some good stuff to the poultry press again. We are glad to have her back in the fold.

If the matter of getting out a new Standard comes through in good shape we will all be glad to see it. If it does not we will all be glad to get at some plan that will fix the responsibility definitely and firmly on the shoulders of a committee when we have the work done again. We dare say that if this work had been turned over to a firm of publishers it would have been completed by this time and never a hitch would have occurred. The work would have been

done as well or better possibly, cheaper, quicker and with less expense to the association. Too many cooks have dipped into the pie. Too many folks have had to get in their work.

THINGS WORTHY OF THE CONSIDERATION OF THE AMERICAN POULTRY ASSOCIATION.

1. The American Poultry Association should seek to get governmental aid for a national and for state poultry experiment stations. The politicians, the railroads and the corporations get what they want from our national and state governments because they go after it, but the poultryman sits at home, smokes his pipe, trusts to luck and Providence and don't get a smell. We believe a committee of the right sort of men could be chosen to so organize the members of the A. P. A. and prepare facts and figures, and bring such influence to bear upon Congress that it would not refuse to make a liberal appropriation for poultry experiments and poultry education. The government is now appropriating several thousand dollars to each experiment station in our several states for investigation in all other branches of agriculture. Why should not poultry be included? We believe that if the proper effort was made our national government would appropriate several thousand dollars each year to each state for poultry investigation, as it is now doing for other things. Surely they would not utterly ignore what Secretary of Agriculture Wilson says is the second most important crop of the farm, being only exceeded by corn. This committee on appropriations could also prepare literature, give aid and suggestions, and help organize the poultrymen in each state where they were making an effort to secure a state appropriation, either for an experiment station, a chair in poultry husbandry, state show or for other purposes. We find one reason our states do not get more money for poultry work is because they do not go about it in a proper and systematic way.

2. The statement that a member of the A. P. A. gets very little benefit that an outsider does not get, and that the members are not getting the benefit they should, is too true. We must make the association mean more to its individual members. We attempted to write a letter recently to our friends in this state, soliciting their application for membership, and we had difficulty in enumerating many special privileges and benefits to members only which would be calculated to persuade many of them to turn loose of their \$10. We have allowed the work of getting out the Standard to overshadow everything, else of interest or benefit to the members. Notwithstanding this fact, members are coming in by the dozens, expecting some real good to come to them in return. The association is getting top heavy, and if we do not adopt some plan of making the association of greater real value to its individual members, we may look for a reaction that will not be best for the association. Even now, with the right of voting by mail ballot as one of our few privileges, so little does the association mean to its members that only about half of its members manifest enough interest in its future welfare to even avail themselves of this privilege. We believe we have men in the association big enough to solve this problem,

RINGLET BARRED PLYMOUTH ROCKS

Have won more prizes at the leading shows of America than all others, which stamps their superior quality. I now have the finest and largest lot of exhibition and breeding birds I ever owned. Eggs, \$4; two settings, \$7; three settings, \$9.50; four settings, \$12.

F. R. Green, One of the oldest breeders of Barred Rocks in the West; at it over 21 years; Lake City, Ia.

MOORE'S S. C. WHITE LEGHORNS

BARGAINS in females from exhibition matings. 100 utility hens for sale, \$1 and \$1.25 each. Eggs half price.

MOORE BROS. : : : : : MOSCOW, NEW YORK

DUSTYNE

Will save your chicks from LICE AND MITES. If your dealer does not handle it, send direct to us. 200-lb. sack, \$2; freight prepaid east of the Missouri. For further information, address

Webster's White Rocks

Eggs at Half Price—For the balance of the season I will sell eggs from my best pens at \$1.50 and \$2.50 per fifteen. Mating list. They are pure Graves Strain.

C. F. Webster : Box 99 : Girard, Penna.

1st Cock, Indianapolis, 1909

KLINE'S WHITE WYANDOTTES

Grandest flock of young stock coming on that I have raised in 18 years; bred from winners at Chicago, Boston, Indianapolis, Pittsburg, Guelph and other shows. Latest winning: Pittsburg, 1, 2 cock; 1 pullet; 3 cockerel; silver cup for best pullet. Am especially strong in cockerels for Dec. and Jan. shows. I know I can please you because I have the quality. Free circular showing my winners.

Geo. M. Kline, Box 64, Downers Grove, Illinois

and we don't think they should be long in undertaking it.

3. This is a time when people by the thousands are beginning to turn their attention to poultry breeding—some because of the high cost of living, some because of the high prices being paid for poultry and eggs, and for various other reasons. People, as never before, are looking for information as to the best system of raising poultry, the best appliances, the best remedies, the best incubators, the best brooders, the best poultry, etc. At such a time as this fakers, swindlers and systems flourish and find a ready sale for anything they have to offer, and by liberal advertising they rob the innocent and uninformed beginners in poultry culture of hundreds of thousands of dollars, and we believe we would be safe in saying it is running into the millions. Thus, the farmer and would-be poultry fancier loses his money, fails with the system, etc., becomes disgusted with the whole business, brands poultry fanciers as a set of fakers and swindlers, and says there is nothing to the poultry business. It seems that the American Poultry Association should have a committee whose business it should be to investigate things of this nature and to attempt to eliminate the untruthful and misleading advertisements, the dead beats, and to protect the public as far as possible from poultry crooks of all kinds. The poultry journals and the association should be kept informed as to these parties, and the government would prosecute all such parties who do their swindling by use of the mails. The A. P. A. is falling far short of its duty if it does not undertake some method of purifying the poultry business and of protecting the uninformed and saving the innocent public the hundreds of thousands of dollars which are now being taken from them by systems, fakers and swindlers in the poultry business. Of course we cannot hope to ever eliminate this entirely, but we can prevent it to a great extent and make it harder for such to exist. The poultry industry is too great a business and the American Poultry Association is too strong and dignified an organization to permit such to be longer practiced without its disapproval and exposure.

4. We should endeavor to simplify and establish a more uniform system of score-card judging. There is not a judge in the business who can tell you offhand the exact value given by the present score card to each section of every variety in the Standard. For instance, in the shape of the back the values range from 5 to 12 points. Some other sections vary about as much. With such a system as our present score card it is a Chinese puzzle—so much so that the best judges do not apply it with any degree of uniformity, and for a young judge or a breeder to attempt to remember the values given different sections in all varieties is simply out of the question. The shape of the back of one variety is no more important than that of another. If either is wrong, it is wrong, and is no more right in one than another, and should be cut accordingly. A wrongly shaped back in a Plymouth Rock is just as serious and should be cut and given the same consideration that a judge would give the same defect in the back of a Leghorn or of any other variety. A score card of the right kind is a good thing for private judging, small shows, and for the inexperienced, and the

members of the association should not be denied one that would be of some value and have some meaning. But the present score card is in disrepute in many sections, and it is a snare and a delusion, and the A. P. A. should busy itself in working out a score card that will be simple, and can be readily applied with some degree of uniformity and can be easily understood.

5. The American Poultry Association is not doing what it should for the commercial end of the poultry industry. With rank and file the raising of poultry is a dollars-and-cents proposition. Fancy poultry could not long exist without commercial poultry, and the commercial poultry is also dependent upon the fanciers to a great extent. Then why should we devote all of our thoughts and energies to one side of the question, which we are in reality doing at present? The commercial poultry far exceeds the fancy in dollars and cents, yet we would not advocate doing the less for fancy poultry, but undertaking more along commercial lines. We do not believe our work should be confined to shape and feathers alone, but to educational questions as to how to raise more and better poultry, and how to get the greatest financial returns for our investment should also receive due consideration at the hands of the A. P. A.

6. The highway robbery of the express companies, and the great loss to seller and purchaser of stock and eggs, occasioned by poor service, by negligence and rough handling, must be dealt with seriously by our association. The individual shipper is practically helpless, but if we go after these companies in dead earnest we can ac-

complish something as an association. We believe if we had a committee to whom the losses could be reported from the breeders in each state, the figures themselves would stagger us until we would become desperate, and we would appeal to those in authority so convincingly that they would not refuse to act in our behalf. The parcels post would go a long way toward relieving the difficulty.

7. The American Poultry Association has become a mighty organization, and its business transactions sometimes involve thousands of dollars. As a matter of protection to the organization, it seems that it would not be out of place for the association to discuss the advisability of the selection of an official attorney to whom questions of contracts and legal matters could be submitted. We would not have to go outside of the association for counsel. The same is true with reference to an official artist. An official attorney need not cost the association much except in cases of litigation, but an official artist is almost as much needed as an official secretary, especially since we are to get out a separate breed Standard each year, and the drawings for the Standard of Perfection run into the thousands of dollars.

8. The A. P. A. government should be made more representative. The various branches could hold their annual meetings and select their delegates to the national meetings. Under our present system only a few from a distance can afford the expense of attending the annual meeting. Then the business of that session is largely dependent upon the members of the particular section in which the meeting is held. It is

43 Varieties

Poultry, squab breeders, fancy pigeons, ducks, geese, pea fowl, pheasants, wild game, dogs and ferrets. Incubators, feed and supplies. Cockerels and pullets for sale. Catalogue, two cents.

Missouri Squab Co., Dept. R. St. Louis, Mo.

NORTHUP'S S. & R. C. MINORCAS

Special Sale of Grand Show and Breeding Birds, Cocks, Hens, Ckls. and Pullets. Minorcas have won more first and second prizes than all competitors combined. Large catalogue free. :: GEO. W. HEY, Successor to Geo. H. Northup & Son, R. 6. Raceville, Washington Co., N. Y.

YOU GET \$8 A POUND FOR

GINSENG

Start Your Bed This Fall

You do not need a farm to do it. A patch of a few square rods will give you a better profit than you can make out of a 100-acre farm.

For over 30 years the price of ginseng has been steadily advancing, never going down. And you are always sure of a market. A great Chinese importing merchant who came to America last year to arrange for larger future shipments reported that America could not possibly glut the Chinese market in the next 50 years.

The World's Greatest Paying Crop

Prices last year ran up to and even above \$8 a pound. Profits are truly wonderful after you get started. A single acre, rightly cultivated, may be made to produce many thousand dollars a year. Even if you have a farm you can't afford to let the ginseng bed go. If you haven't a farm, use the back end of your lot, but get your bed started now. In 3 or 4 yrs. it will be making you big money.

We are headquarters for the genuine seed of the American variety. Start in right—don't make the mistake of planting the Japanese ginseng which is nearly worthless. Our excellent book will tell you everything you want to know—all about planting, growing, drying, marketing, all about varieties and where and how to sell to get the high prices. We will gladly mail you a copy free. Write for Ginseng Booklet A.

Newtown Producing Company, Newtown, Bucks Co., Pa.

not, therefore, representative of the entire association.

9. Our present system of licensing judges means practically very little. Our best judges do not think enough of the license to even state, on their stationery that they are "a licensed A. P. A. judge." We believe there should be a set of questions prepared each year by a committee for that purpose, and each branch have an examining board consisting of the best judges in the branch. Then let the applicant attend the branch meeting, do some judging, answer the questions and be examined by the board the same as our teachers, lawyers and doctors are examined before they are permitted to teach or to practice law, or medicine. Then these answers and the report and recommendation of the examining board could be submitted to the executive board of the A. P. A. and the license issued or refused.

10. Our Standard is forcing the breeders of some varieties to double mate in order to meet the requirements. By so doing it is forcing the breeders of such varieties to have double the amount of stock, double the housing, yarding, feed and equipment to produce a given number of exhibition birds that is required of some other varieties. While this may enrich a few fanciers who are experts in the business, yet it is a great loss and detriment to the rank and file of the breeders of those varieties and to a large majority of the members of the association. By this forced double mating the pullets in the cockerel line are worthless except as breeders or for market purposes, and the same is true with the cockerels in the pullet line. A few years ago 90 per cent of the poultry produced upon the farms in this state were of one of these varieties which are now required

to double mate, but the farmers and the amateur exhibitors became disgusted with trying to produce them to meet the present requirements of the Standard, and they have discarded this variety for varieties which can be bred by single mating. Why should any breeder be forced to keep two pens of one variety to get show specimens in both male and female, when he can take one pen of some other variety and get as many show specimens as he gets from both the other pens? The policy of the American Poultry Association should be to do the greatest good to the greatest number, and should not work hardships upon some varieties to the advantage of others, or upon the masses to the advantage of a few.

11. It seems that the institutes held in connection with our annual and branch meetings should not be neglected. We should have the most able men in the association speak upon various topics of vital importance to the breeders, and we should send all delegates and visitors back to their homes filled with good things to put into practice in their own yards, and to instill new life and new ideas into the work in their respective states and branches. This part of our work should be enlarged upon.

12. We attended the last annual meeting at Niagara Falls, and it seemed to an outsider that too much of the association's business was transacted by the executive board. A good part of the time was spent by this board in passing upon questions which seemed to us should come before the entire convention. The members of the association had assembled for the purpose of transacting the business of the association, some of them coming hundreds of miles, yet each day on several occasions they were kept waiting and

waiting, long over the time for the session to open, for the executive board to adjourn its meetings. It seems that much time is wasted in that way, and as the members have met for the purpose of transacting the business of the convention, that all business should come before the association proper. As a newly elected member of the Executive Board, we prefer that the members be given the opportunity to pass on all business of the convention when they are in session, that the sessions begin on time, and then after adjournment or between sessions or annual meetings we believe is the proper time for the Board to act. We do not believe that the Executive Board should take up the time or the business of the members, when the members themselves are in session. The members get tired waiting, drift off into sight seeing, and lose interest in the convention.

13. We believe the separate breed standards should be published without delay. We do not see what can be gained by delay. The breeders of the different varieties will be willing to pay nearly as much for a separate breed standard as for one of all varieties, as most of those who buy the standard are interested in only one variety anyway. It will not cost the association as much to get these out as the complete standard, and be a greater profit in them compared to the cost than in the complete standard. The association should not delay this work longer.

14. If the association would select committees of three members each, these committees to be composed of able and representative members from the various sections represented by the association, it would give more members some particular work to do; it would interest them in the work of the association, and give representation to all territory in which we have members. We need a committee on appropriations and legislation; committee on investigation as to fakers, systems, etc.; committee on standard bred poultry; committee on commercial poultry; committee on instruction and institutes; an examining board for judges license; an official attorney; an official artist, and such other committees as we need to represent all branches of the industry. Have these committees make an annual report to the convention, and have a general discussion of the report and the subject by the members, and we feel safe in saying it would prove to be one of the liveliest and most interesting and helpful meetings ever held by the association.

These are a few of the many questions which we believe should receive the serious consideration of the members of the American Poultry Association, if it is to grow and be of a permanent and increasing value to its individual members and to all branches of this great industry. We would be pleased to hear from the members of the association, if they have suggestions of interest to the welfare of the association.

T. E. QUISENBERRY,
Columbia, Mo.

The above article by Mr. Quisenberry affords much food for thought. This is a great age for improvements, conditions are changing, the number of people taking up fancy poultry is increasing very rapidly. We must change our association to keep abreast of the times and improve it to meet the pres-

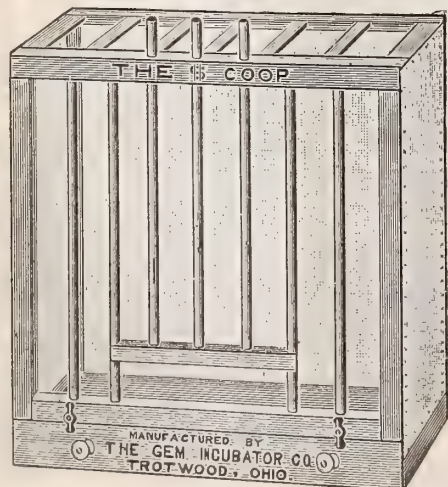

BREEDING SEASON OVER

We offer our yearling breeding hens at one dollar and a half per bird. This is a chance of your life to get a start with the famous LAKEWOOD FARMS strain of Single Comb White Leghorns. These birds will be shipped direct from our Lakewood plant.

We will hatch no more chicks this season. We are adding 50,000 capacity to our machines and are now taking contracts for 1911, delivered in lots of 500 and up. State what kinds you want and get our proposition.

The Co-Operative Breeding & Hatching Co., Box A, Tiro, Ohio

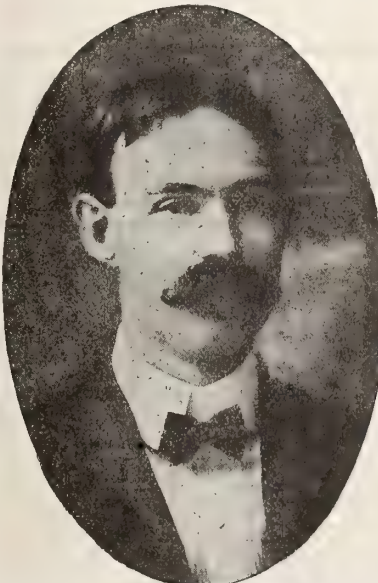

GINSENG

Cultivated Ginseng and Golden Seal seed and roots now ready for planting. My book, "Culture and Profits of Ginseng and Golden Seal," with prices of seed and roots, free. Send for it.

D. BRANDT, Box 301, Bremen, Ohio.

Last year the poultry show at the Illinois State Fair was conceded by the fanciers, judges and editors to be one of the most artistically arranged and best conducted shows in the United States, and considering the great interest taken by the breeders in the state of Illinois and the advancement of poultry culture throughout the state, the show this year will surpass any that have gone before.

The poultry building is the finest of its kind in the country, and is cooped throughout with the beautiful new Empire coops. This year the State Board of Agriculture is offering larger premiums than ever before. It is the intention of Superintendent George Cooper and his assistant, O. L. McCord, to make this strictly a fancier's and breeder's show, therefore the specialty breeder need not hesitate to send his birds, as every precaution will be taken in caring for the stock while on exhibi-

E. E. Wilson, Indianapolis, Ind., recently elected state vice-president of American Black Minorca Club.

tion, and will be shipped to the owner at the close of the fair. Feed will be furnished free of charge to the exhibitor, so it will not be necessary for them to accompany their stock unless they wish to do so.

A large tent will be erected just north of the poultry building, which will be headquarters for the Illinois State Poultry Association and the meeting place of all specialty clubs.

In connection with the poultry department, on the last four days of the fair a Poultry Institute will be conducted. Papers will be read and talks made by the following well-known poultry fanciers and others: Judge D. T. Heimlich, Jacksonville, Ill.; Theodore S. McCoy, Springfield; Judge Theodore Hewes, editor Inland Poultry Journal, Indianapolis, Ind.; Col. Charles F. Mills, editor Farm Home, Springfield; Hon. A. G. Murray, Springfield; W. H. Shaw, Canton, Ill.; Prof. D. O. Barto, State University; Dean Davenport, University of Illinois; R. T. Cameron, Ottumwa, Ia.; Will Ottwell, of Ottwell's Farmer Boy, Carlinville, Ill., and Hon. W. P. Holliday, Danville, Ill.

Thursday, October 6, will be ladies' day at the institute. Mrs. Laura B. Evans, of Taylorsville, Ill., one of the

Incubators, brooders, shipping coops, exhibition coops. Send for descriptive circular.

The Owen Company, South St., Allegan, Mich.

The Buffalo Incubator

Made by

Chas. A. Cyphers

Has Made Good

THE Crystal Springs Poultry Co., Oil City, Pa., markets 75,000 ducks and chickens per annum. The following letter from them speaks volumes:

"Have just completed a hatch with the Buffalo Incubator, and beg to advise you that it is the largest per cent of fertile eggs taken off this season—ninety-three per cent.

"We have ninety-seven machines of different makes, but the Buffalo is far superior to any of them. It takes less to heat it, is more easily regulated, is scientifically simplified in every respect, and certainly far ahead of any incubator upon the market today. After my thirty years practical experience in the poultry business, I say to you, do not change it. In the Buffalo you have a world beater."—**Patrick McEvoy, Mgr.**

Send your order today. Prompt shipment guaranteed. State size wanted and enclose price with order. I guarantee the Buffalo in every way to be the best incubator ever offered at any price.

trustees of the State University of Illinois, will have charge of the program, and the following ladies and others will take part: Mrs. H. C. Wilhite, Greenfield, Ill.; Mrs. C. L. Carney, Charleston, Ill.; Miss Kate Maxey, Curran, Ill.; Miss Lottie Jones, Danville, Ill.; Mrs. J. W. Clary and Mrs. D. T. Heimlich, Jacksonville, Ill.; Mrs. Lindsey Reese, Pana, Ill.; Mrs. A. H. Floyd, Golconda, Ill., and Mrs. C. L. Bushman, Indianapolis, Ind.

Attention, Poultry Exhibitors!

When making your entry do not forget: Birds entered in single classes cannot compete for breeding-pen prizes, and birds in breeding pens cannot compete for single prizes. Pens should be shipped together with the leg bands on each bird, and marked on the outside of the shipping coop whether for single class or breeding pens.

For any other information regarding the Poultry Department at the Illinois State Fair, address O. L. McCord, Danville, Ill.

THE APPALACHIAN EXPOSITION.

The Appalachian Exposition Poultry Show, which will be held from October 5 to 12, is being given such encouragement from breeders and exhibitors all over the country that the largest and best exhibition of fancy chickens ever seen in the South is easily assured.

The Exposition Poultry Show Committee consists of the following representative poultrymen, who are hard at work on the many details of the big show: L. B. Audigier, chairman; John E. Jennings, secretary; J. H. Henderson, J. C. White, E. E. Carter, R. P. Williams, W. J. Fraser, Knoxville; Mrs. S. C. Bridgewater, Dixon Springs, Tenn.; John A. Murkin, Nashville, Tenn.; C. O. Harwell, Atlanta, Ga.; W. C. Cleckley, Augusta, Ga.; J. P. Swift, Waynesville, N. C.; J. E. Hage, Asheville, N. C.; B. S. Horne, Keswick, Va.; T. S. Meek, Wheeling, W. Va.; A. K. Kessler, Huntington, W. Va.; C. F. Ward, Winter Park, Fla.; L. C. Marsh,

Washington, Miss.; C. T. Fallin, Greenville, S. C.; C. H. Dozier, Marion, Ala.; W. H. Hofferbert, Gadsden, Ala.; F. L. Smith, Lexington, Ky.; John H. Good, Louisville, Ky.; J. G. Blair, Carlisle, Ky.

A large, well-lighted and ventilated building, covering 20,000 square feet of floor space, has been erected especially for holding the live stock, dog, poultry, pigeon and pet stock shows, and ample room will be supplied for 3,000 birds. The dates for these shows are as follows: Live stock, September 12-17; dogs, September 21-24; pigeons, September 27-October 1; poultry, October 5-12.

The judges for the poultry show are: J. H. Drevenstedt, 3065 Decatur avenue, New York City; W. Theodore Wittman, Allentown, Pa.; F. J. Marshall, College Park, Ga.; D. M. Owen, Athens, Tenn. The show will be held under the rules of the American Poultry Association, and all awards will be made by comparison. Entry fee: Single birds, 50 cents; exhibition pens, \$2.

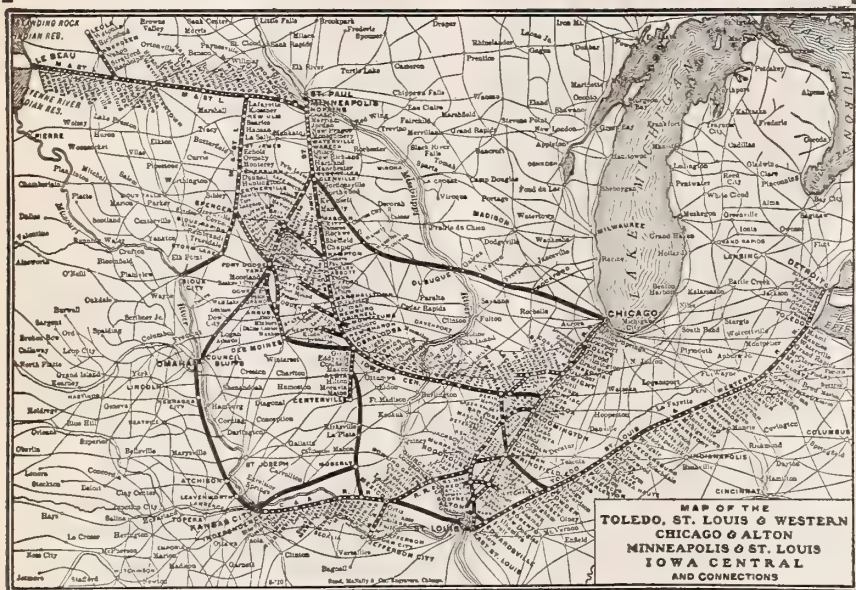

A Poultry Institute will be held during the week, conducted by Judge S. T. Campbell, secretary-treasurer American Poultry Association. Robert R. Slocum, of the United States Department of Agriculture, Washington, D. C., will deliver an illustrated lecture. Other speakers are Prof. A. A. Brigham, Brookings, S. D.; Reese V. Hicks, Topeka, Kas.; Judge S. T. Campbell, who will lecture on "Breed Types" and illustrate with live poultry; James G. Halpin, of Wisconsin, who will speak on the subject, "Winter Egg Production," and Thomas S. Meek, secretary West Virginia branch, A. P. A., who will talk on "A Plea for More Institutes."

The complete premium list is now ready.

ALLENTOWN FAIR POULTRY SHOW FOR 1910.

W. Theodore Wittman, superintendent, writes us that the judges this year will be: W. C. Denny, Rochester, N. Y.; George O. Brown, Baltimore, Md.; Fred Huyler, Peapack, N. J.; F. W. Rogers, Brockton, Mass.; David Nichols, Shelton, Conn.; W. Barber, Toronto, Canada; Rudolph Weissfurt, Philadelphia, Pa.; William Ehringer, Philadelphia, Pa.; also that there is every promise of the usual good and big show. The premium list, which will be out on or about August 1 and which can be had by writing to the superintendent, will show that in the classes, rules and arrangements Allentown has not been standing still, but doing better than ever for both the poultry and pigeon fanciers. Other poultry judges, notably a water-fowl judge, may be added. As this is being written the 748 new additional poultry water-fowl display and pigeon coops, made especially by the Empire Cooping Company, are being placed in position. Entries positively close Friday, September 9, and no officer, employee, or judge can enter or be interested in any birds entered. Entry fees: Poultry, \$1 each; pigeons, 50 cents each. First prizes: Poultry, single bird, \$4; exhibition pen, \$20; pigeons, \$2 (two only to fill a class). Railroad facilities and express accommodations A1, and show a three-day, daylight show only. A fine place to sell birds and do business, as Allentown lies in the heart of the richest agricultural and manufacturing district in America, while the fair itself

has the reputation of being one of the oldest, biggest and best fairs in the country. Try Allentown this year.

ATLANTA, ILL., FAIR.

The Golden jubilee of the Atlanta, Ill., Fair Association will be held August 30-September 2. This is one of the most successful associations in the country, and the prizes given in all departments are very liberal. F. R. Clark, Bloomington, Ill., the well-known dog fancier, is assistant superintendent of the dog department, and he wishes to call our readers' attention to the \$150 cash offered in prizes in this department, besides other specials. The entry is free. Address B. I. Pumpelly, secretary, Atlanta, Ill., for a copy of premium list.

REMEMBER CHICAGO.

The second annual exhibition of the Great Mid West Poultry and Pet Stock Association will be held in the Coliseum Building, Chicago, Dec. 8-14, 1910. The association offers \$49 in cash on every breed and variety—standard and non-standard.

Empire cages will be used in all departments. The following judges will award the prizes in the Poultry Department: Geo. F. Burgott, Sharp Butterfield, Thos. Faulkner, A. F. Kummer, Chas. V. Keeler, O. L. McCord, W. C. Pierce, W. S. Russell and Jas. A. Tucker. Premium list, Nov. 1.

CHICK-CHAT.

On to St. Louis!

Hail! hail! the gang will all be there.

It looks like Boston for the next. Buffalo, Detroit and Toronto will be heard from later.

We fear Link Orr won't register at St. Louis. The August climate there doesn't suit, or is it on account of his Alpha-Meal business?

Have you used Alpha-Meal for growing chicks and laying hens? If not, why not? We think it the best ever.

A large delegation from Canada will attend the A. P. A. meeting and we are also reliably informed that the East will send its share.

We hope we can make this and renew acquaintances. The American Poultry Journal will be represented just the same, and the meeting promises to make a new record.

Have you taken advantage of the special sale season now upon us? This is the time for the breeder to plan ahead and to secure some real bargains in breeders for next season.

Owen Farms have issued a splendid circular, which also contains the news that they don't expect to exhibit this year. This will give their customers the advantage of securing some of the birds they would otherwise have to reserve. Think this over.

Mr. Owen surely has nothing to gain by exhibiting at this time. The record his birds have made for some years is a foundation upon which he may well rest for a year or two, and this action on his part again proves him a leader and the liberal, broad-minded man we have known him to be.

We lately had a visit from Mr. G. L. Wheeler, Penn Yan, N. Y., the well-known breeder of S. C. White Leghorns. Mr. Wheeler reports a great season with eggs for hatching and a strong demand for fine breeders now. He has about 500 chicks out and insists that we must go and see them.

Since our trip among the Pennsylvania and New Jersey breeders in the spring we have almost daily received letters urging a return engagement for this fall. That surely is great poultry territory and we do hope to again cover the same route and also make some others we missed.

New York is booked for two shows this winter. The Grand Central Palace show will be held November 18 to 24 and the usual Madison Square Garden show, with the Hon. H. V. Crawford at the wheel, December 27 to 31.

A Coming Statesman—Teacher: "Bobby, you were not at school yesterday." Bobby: "Nope, was paired with Skimpy Jones."

The unanimous reelection of both President Bryant and Secretary Campbell are well deserved honors. We hope to vote for both again.

The great Philadelphia show will be

held December 12-17, 1910, and will initiate the show season of the great Eastern shows. President Henry D. Riley, Strafford, Chester county, Pa., will gladly supply all information.

The great New York show will be held at Madison Square Garden, New York city, the last week in December. We hear from reports that the doors will be closed until the judging is done, which will be completed in one day. A grand idea.

Allentown Fair Poultry Show, Allentown, Pa., Sept. 20-23, 1910. W. Theo. Wittman, Supt.

The Inter-Mountain Four-State Fair, Ogden, Utah, Sept. 23-29, 1910. I. L. Reynolds, Sec.
